16. Are you aware if the containers were removed after they were buried?

그들이 매장된 이후 그 용기들이 혹시 이동되어졌는지 알고 계십니까?

On 13 June 2011 Mr. ██████ went back to the site in Helipad and Landfarm to see what was left behind, he noticed that the area was dug up from the site. He thought that there was nothing left to excavate since a new fence line built with concrete cement in that area.

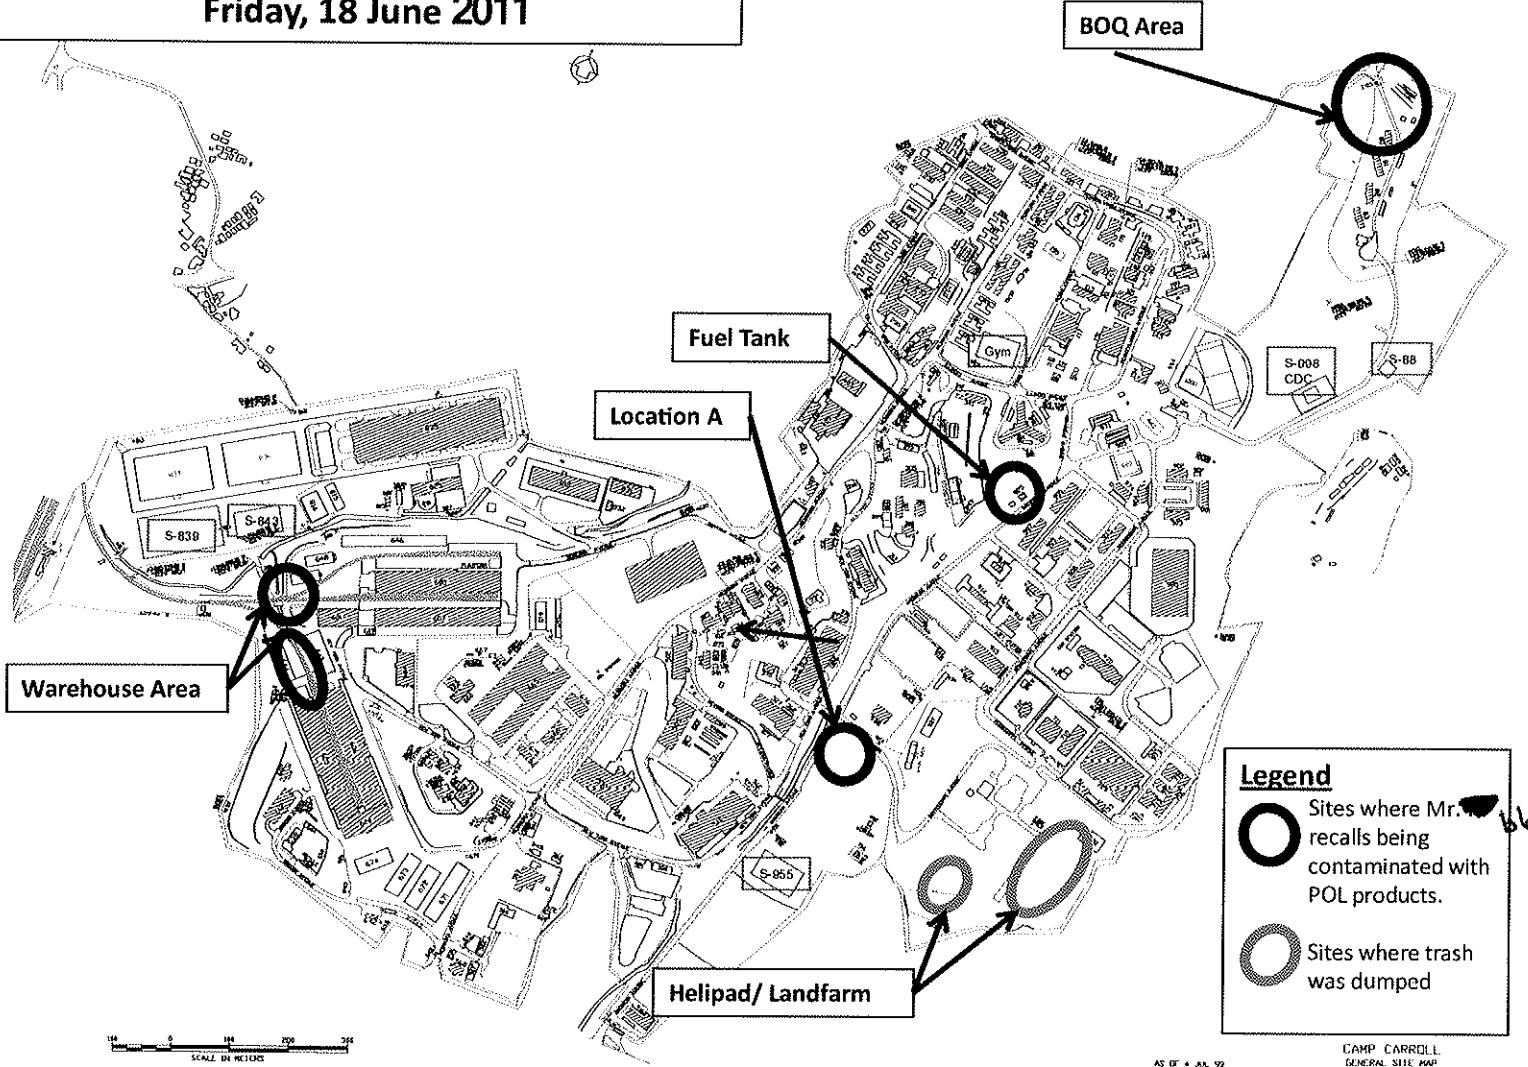

#### Interesting Notes

- A. Mr. ██████ stated that he was interviewed by the Chilgok County Governor that there was no Agent Orange (or any harmful products) buried in the helipad area. When the governor was interviewed by Korean news, he never mentioned Mr. ██████'s assertion that there was nothing harmful in that area. Additionally, he told the same thing to two news reporters ██████ and ██████ that there was no Agent Orange in vicinity of the Helipad area. However these two reporters wrote articles stating that Mr. ██████ buried drums of Agent Orange and he's now sick and suffering from stomach cancer. Mr. ██████ was in relatively good health despite the fact that he is in 70s.

- B. He was emphatic about his belief that there was nothing harmful buried in the helipad area. He denounced what Mr. House stated.
- C. He mentioned that near Landfarm area, they used to collect all kinds of trash (left-over construction materials) that Korean contractors left behind after their project on Camp Carroll. They were building up pretty fast, so he was told to burn them up and buried them.
- D. He stated that whenever there is hazardous waste (mixed gasoline, oil etc), they collected them and called the Koreans company to come on post and haul them away from Camp Carroll.

2502

Mr. ██████████ Interview  
Friday, 18 June 2011

2503

**ENVIRONMENTAL SUBCOMMITTEE**  
UNDER  
THE UNITED STATES OF AMERICA AND THE REPUBLIC OF KOREA  
JOINT COMMITTEE, STATUS OF FORCES AGREEMENT

AUG 2 2011

Mr. [REDACTED]  
Director, Soil and Groundwater Management Division  
Ministry of Environment  
Jungang-Dong 1, Gwacheon City  
Republic of Korea, 427-760

Dear Director [REDACTED] Wb

The disposition of the items discovered during the 2008 land farm expansion at Camp Carroll has been an interest item as our two countries investigate allegations that 250 barrels containing Agent Orange remain on Camp Carroll. The Army record search is complete with the following results:

The Camp Carroll land farm consists of treatment areas identified as bed #1 and bed #2. During the expansion of bed #1 in April of 2008, waste materials were unexpectedly uncovered. These wastes included:

1. Fifteen empty 55 gallon drums – some of these drums were labeled as cleaning solvent,
2. Five 55 gallon drums containing a liquid that contained mercury
3. Approximately two hundred empty five gallon cans – some of these cans were labeled with a chemical manufacture's name "Mallinckrodt",
4. Metal containers whose content was identified as calcium carbonate,
5. Vinyl bags of powdered chlorine for food service disinfectant and an unidentified inhibitor
6. Vehicle batteries, and
7. Construction and metal debris.

In addition to the materials listed above, 2,083 cubic meters of soil with a chemical odor were excavated from bed #1 and moved for treatment to bed #2. A liquid with a brown color formed in the bottom of the excavation in bed #1. Attachment A contains images depicting the location of the unexpected material, examples of the items listed above, the liquid, and the environmental sampling activities conducted after the excavation associated with the waste material removal was complete.

Five soil samples and a sample of the brown colored liquid were collected before the area was filled to finish construction of bed #1. The results of these samples are at attachment B. In summary, the site was clean after the waste

2504

material was removed. There are no indication from the pictures, description of the waste, or analytical results that Agent Orange was buried in this area.

The waste materials excavated during the project were kept on site in a specially constructed area and disposed of through DRMO. Composite samples were taken to identify the wastes for disposal. Based on laboratory analytical results (attachment C), the excavated material was segregated and prepared for disposal through DRMO. In summary, the liquid in the 5 drums contained mercury at levels that exceeded Korean Environmental Governing Standards (EGS) requiring disposal as a regulated material. The balance of the wastes were non-regulated.

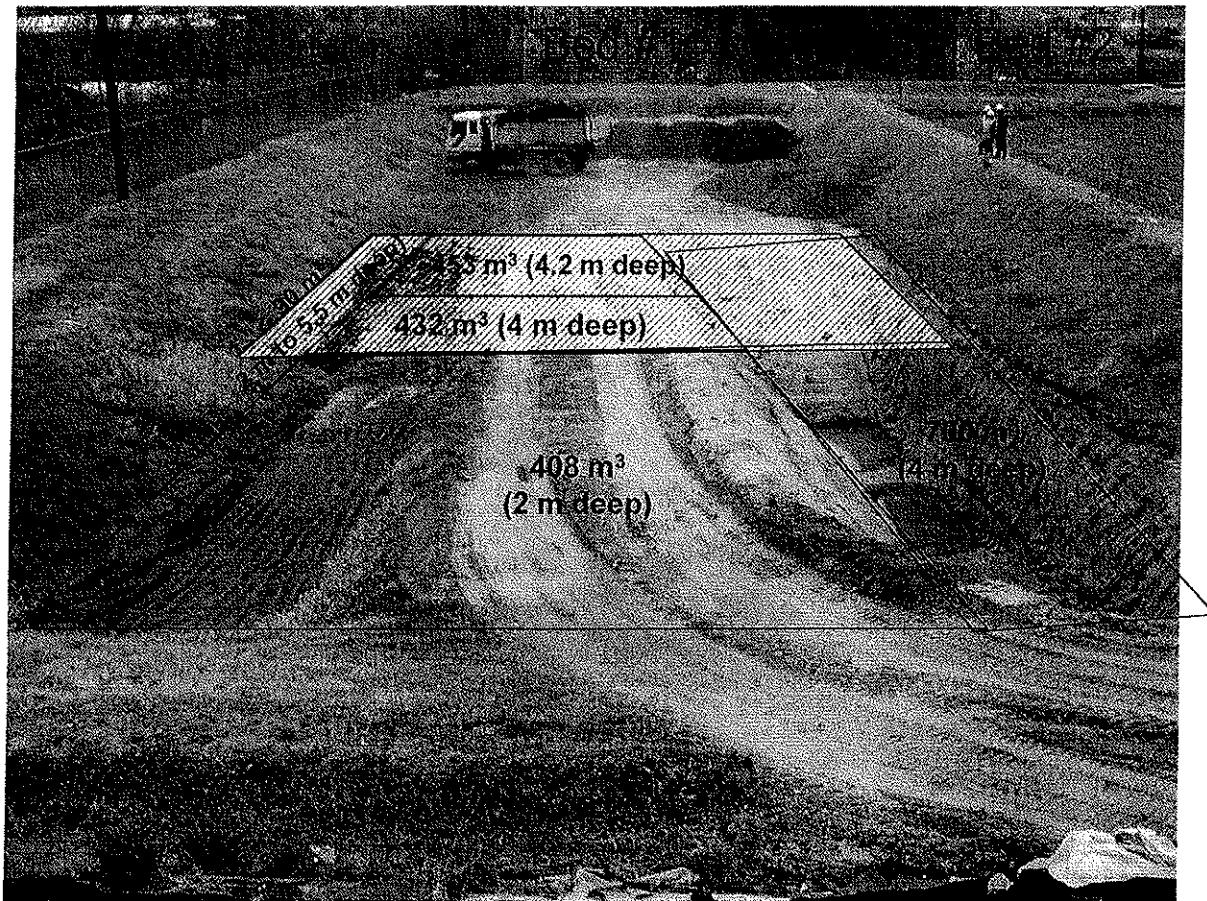

Based on the laboratory analytical results, the waste material was grouped into three categories for disposal: (1) 5 drums labeled "liquid containing mercury"; (2) 5 drums labeled "contaminated soil/debris"; and (3) 3 large wooden containers (industrial waste boxes) labeled "POL contaminated soil". These 13 containers were transported and stored in building 722 (Camp Carroll HW storage facility) until they were transported to a treatment/disposal facility by a DRMO contractor.

Turn-in documents and a "certificate of disposal" for all wastes are at attachment D and E respectively. For your convenience in attachment E, I highlighted the three categories of waste removed during the construction of bed #1 and their disposal method.

I know this information will provide you a factual basis to further our consultations on this matter. As always, I look forward to our continued discussions on important matters of mutual interest.

**Camp Carroll 2008 Land farm Expansion****Summary of Excavation Status**

1. 2,083 m<sup>3</sup> of Soils were excavated from L/F bed #1 and transported to L/F bed #2 for treatment.
2. Buried items were generally discovered from 0.5 meter to 3 meter below grade, and discolored soil was excavated from the bottom of the buried items was 4 ~5.5 meters below the surface grade.
3. Buried items were found in the middle of the bed (hatched area with orange color)..

White powder metal cans - Sampled for chemical analysis

Public Release Requires ROK-US Joint Committee Approval

2507

Excavating metal containers buried at east slope of the land farm bed

Five gallon cans that was usually observed (labeled as "Mallinckrodt")

Public Release Requires ROK-US Joint Committee Approval

2508

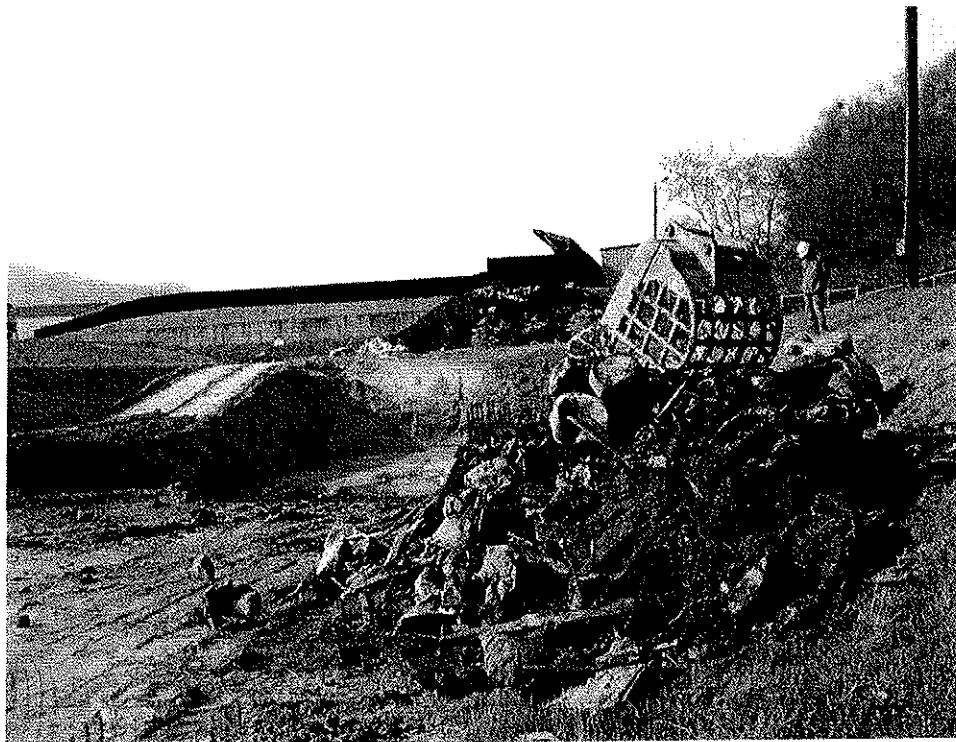

55 gallon drums & 5 gallon cans in specially constructed area awaiting proper packaging for disposal

Public Release Requires ROK-US Joint Committee Approval

2509

Construction and metal debris

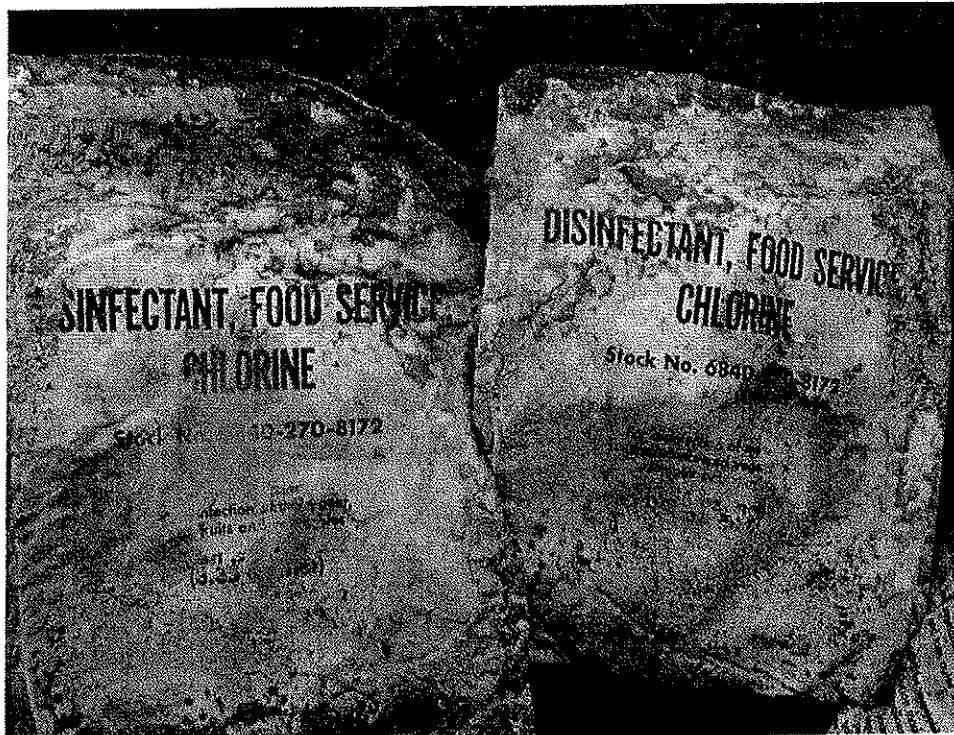

Vehicle battery

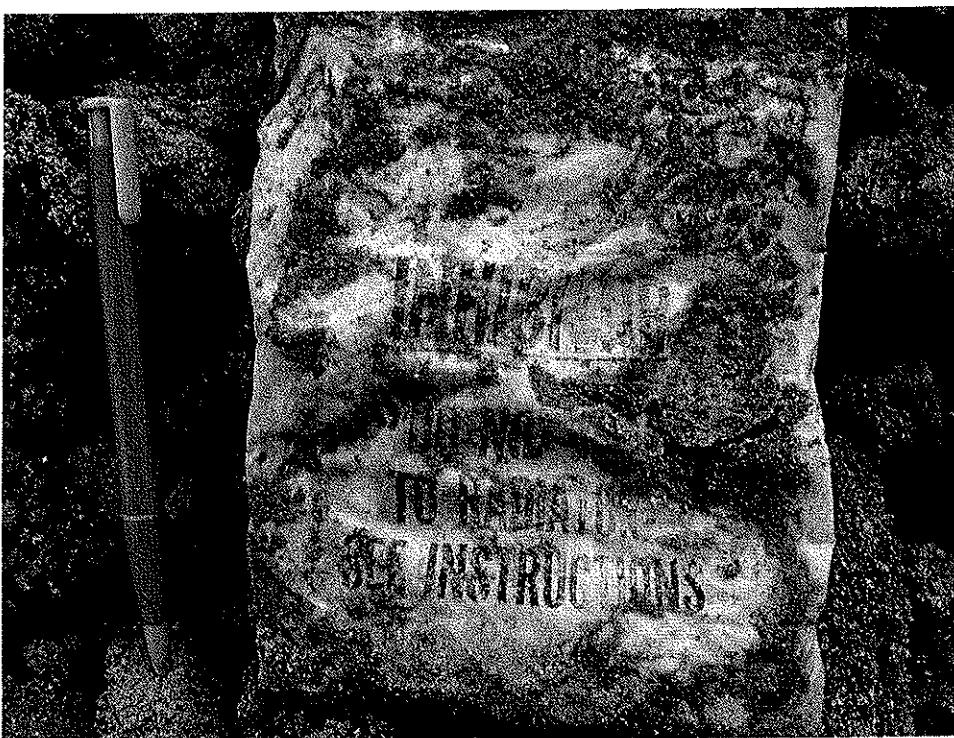

Public Release Requires ROK-US Joint Committee Approval

2510

Chlorine in vinyl bag

Inhibitor

Public Release Requires ROK-US Joint Committee Approval

2511

liquid at the bottom of excavation:  
Other than brownish color, there is no observable property

Confirmation sampling:  
Five soil samples were collected for confirmation purpose,  
and one sample was collected beneath the buried drums with some odor  
for chemical identification

Public Release Requires ROK-US Joint Committee Approval

## SGS Testing Korea Level IV Data Report

Lab Work Order No. : G6-63

Enclosed are the analytical results associated with the above workorder

As required by the Korea MOE and US EPA, a formal Quality Assurance / Quality Control Program is maintained by SGS Testing Korea.

A Copy of our Quality Control Manual that outlines this program is available at your request.

All statements and data in this report are in conformance to the provisions set forth by the SGS Quality Assurance Program.

If you have any questions regarding this report or if we can be of any other assistance, please call SGS Project Manager [REDACTED] b6

The following descriptions may be found on your report which will serve to further qualify the data.

PS	Parent Sample
MDL	Method Detection Limit
PQL	Practical Quantification Limit (reporting limit)
C	QC result has exceeded or is under control limits.
U	The analyte was analyzed for, but not detected. The associated numerical value is at or below the MDL.
F	The analyte was positively identified but the associated numerical value is between the MDL and the PQL.
R	The data was rejected due to deficiencies in the ability to analyze the sample and meet QC criteria.
H	The natural concentration of the spiked element is so much greater than the spiked concentration spiked so that an accurate determination of spike recovery is not possible.
B	The analyte was found in an associated blank, as well as in the sample.
D	The analyte concentration is the result of a dilution.
M	A matrix effect was present.
S	To be applied to all field screening data.
T	Tentatively identified compound (using GC/MS)
*	Certified parameter by Nelac
NA	Not Available

Note : Soil samples are reported on a dry weight basis unless otherwise specified

### Data and Evaluation Report for Matrix Spike (Duplicate)

Client Name : USACE FED

All Dates/Times are Korean Standard Time

Project Name : DO0005-12

Project No. : 08-014E

Matrix : Liquid

Printed Date/Time : 05-14-2008

Technical Manager [REDACTED] *BL*

QC Remarks:	There is no specific qc remarks.
