Navigating through the Construction and the VA Strategic Capital Investment Plan Submission.

Volume 4 of the Department of Veterans Affairs 2012 Budget Submission consists of two major sections: the traditional VA Budget submission, and the VA 10-Year Plan developed during the Strategic Capital Investment Planning (SCIP) process.

Traditional VA Budget Request

The first section (Chapters 1 through 6) is VA's traditional budget submission for construction and grants for construction programs. Chapter 1 provides a general overview of the 2012 construction program request. Chapter 2 includes the 2012 VA major construction program request and contains detailed program and project information (project prospectuses), project descriptions, cost estimates and projected construction schedules. Chapter 3 includes budget materials for the minor construction program for VA's Administrations and staff offices. Chapters 4 and 5 capture budget and program information for VA's two capital grant programs: the Veterans Cemetery Grant Program and the State Extended Care Grant Program. Chapter 6 includes the 2012 authorization request for major medical facilities (major construction and leases) and other construction related notification materials. The authorization and notification chapter also provides the current status of existing authorizations and VA leases. The traditional budget will also include the priority list of projects reviewed and scored during the 2012 SCIP process (Chapter 7).

10-Year Strategic Capital Investment Plan

The second part of this volume (Chapter 8) is the 10-Year Strategic Capital Investment Plan. The Strategic Capital Investment Planning (SCIP) process is an innovative Department-wide process designed to improve the delivery of services and benefits to Veterans, their families, and their survivors, with the safest and most secure infrastructure possible, by addressing VA's most critical needs first; investing wisely in VA's future and significantly improving the efficiency of VA's far-reaching and wide range of activities.

VA uses the best infrastructure planning practices from both the private and public sectors to integrate all capital investment planning for major construction, minor construction, non-recurring maintenance and leasing. SCIP provides a comprehensive plan to improve the quality, access, and cost efficiency of the delivery of VA benefits and services through modern (i.e., newer and/or better

conditioned) facilities that match the location and needs of current and future demand - locating VA facilities where our Nation's Veterans live.

SCIP comprehensively integrates capital planning across all VA Administrations and staff offices to deliver higher quality services, wider access, and better value to Veterans, their families, and their survivors.

Using gap analysis and projected utilization of services, SCIP identifies specific capital investment needs to close performance gaps in the areas of safety, security, utilization, access, seismic protection, facility condition assessments, parking and energy.

The appendices provide useful information and data such as the decision models and criteria used by the Department to assist in ranking projects, historical funding tables for VA major projects, and tables featuring VA construction programs. For a detailed listing of tables refer to the Chapter 8 table of contents.

Construction Summary of 2012 Request

A total of \$1,270,695,000 is requested in new budget authority for 2012 for all construction programs. This consists of \$589,604,000 for Construction, Major; \$550,091,000 for Construction, Minor; \$85,000,000 for Grants for State Extended Care Facilities; and \$46,000,000 for Grants for Construction of Veterans Cemeteries. The program level request of \$1,406,376,000 includes an additional \$135,681,000 in major construction available from prior year appropriations.

Construction Summary of 2012 Request (dollars in thousands)				
	Construction Major	Construction Minor	Other Request	Summary Request
Veterans Health Administration	\$545,404	\$461,868	\$0	\$1,007,272
National Cemetery Administration	\$38,200	\$41,628	\$0	\$79,828
Veterans Benefits Administration	\$0	\$23,645	\$0	\$23,645
General Administration - Staff Offices	\$6,000	\$22,950	\$0	\$28,950
Additional resources from prior year unobligated major construction funds	\$135,681			
Subtotal	\$725,285	\$550,091	\$0	\$1,139,695
Grants for State Extended Care Facilities			\$85,000	\$85,000
Grants for Construction of State Veterans Cemeteries			\$46,000	\$46,000
Total Construction, New Budget Authority	\$589,604	\$550,091	\$131,000	\$1,270,695
Total Construction, Program Level	\$725,285	\$550,091	\$131,000	\$1,406,376

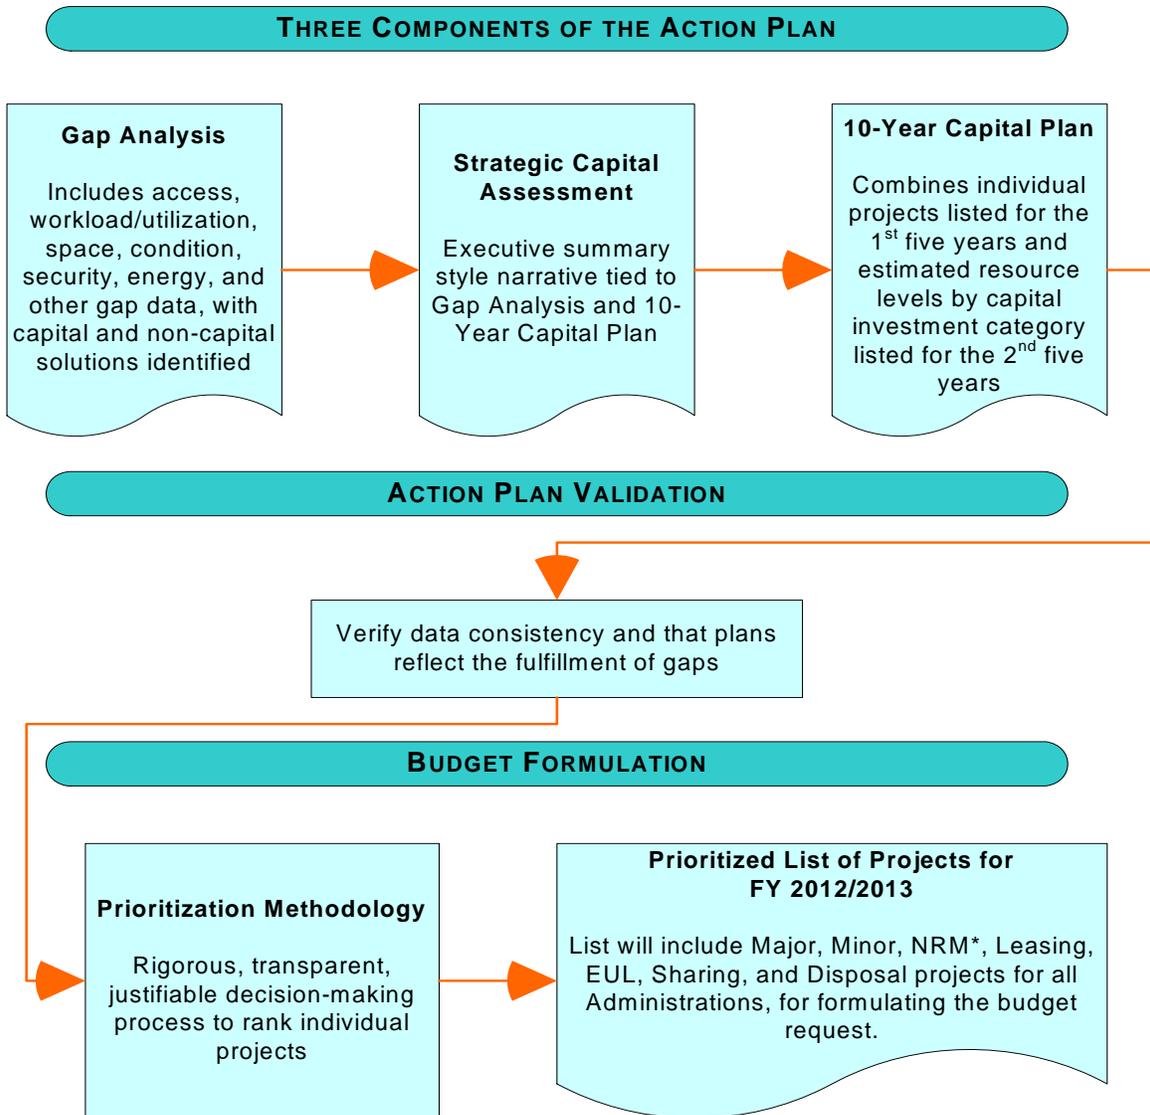

This program level request would allow VA to include 4 new starts (3 VHA projects and 1 NCA cemetery expansion) as well as funding additional needed minor construction projects and continuations of previously funded major construction projects. The request is consistent with the newly established Strategic Capital Investment Planning (SCIP) process.

VA prioritized construction projects utilizing the newly implemented Strategic Capital Investment Planning (SCIP) process. SCIP is an innovative Department-wide planning process that resulted in the creation of a single, integrated prioritized list of projects from all capital investment accounts (major construction, minor construction, and non-recurring maintenance). SCIP is designed to improve the delivery of services and benefits to Veterans, their families and survivors by addressing VA's most critical needs and/or performance gaps first, investing wisely in VA's future and significantly improving the efficiency of VA's far-reaching and wide range of activities.

Additionally, SCIP provides a long range strategic plan that allows the Department to adapt to changes in demographics, medical and information technology, and health care and benefits delivery, while at the same time incorporating green building technologies, sustainability, and other infrastructure enhancements. The diagram on the following page illustrates the SCIP process from the development of action plans to the submission of this year's budget request. This includes the major components of SCIP (gap analysis, strategic capital assessment, and specific capital project requirements), action plan validation (through VA SCIP Board and VA governance process), and the development of a priority listing that provides the basis for the 2012 construction budget submission.

Strategic Capital Investment Planning

Major and Minor Construction, Non-recurring Maintenance (NRM)*, Leasing, Enhanced-Use Leasing (EUL), Sharing, Disposal, and Other Investments

*This capital asset category includes the sub-categories of: sustainment, infrastructure improvements, green management, and leasing.

The SCIP process ensures that all resource requests are scrutinized and centrally considered, at the corporate level, with equitable and consistent distribution across markets and competing capital needs. Each resource request is reviewed against the gap categories described above and evaluated based on its contribution towards addressing identified gaps. This process ensures resources are efficiently allocated to address the most critical gaps.

Based upon the current cost estimates to remediate all gaps as projected in the 10-Year Action Plan the full implementation of SCIP would require total resources of between \$53 and \$65 billion for capital infrastructure costs. It is important to note that this estimate is a snap shot in time, it is based on current market conditions, baseline capital portfolio and demographic data and projected needs. The costs provided will likely change as projects move through the investment process and cost estimating and project requirements become more refined. For example, estimates are fine tuned from action plan to business case to project prospectus (for major construction) to final design and construction documents. The magnitude estimate does not include activation (start up) costs, however VA is planning to develop a methodology to allow the Department to incorporate activation costs for future SCIP plans. Additionally, the SCIP action plan projects do not include life cycle costs in their estimates.

Estimates of the total cost by Administration of all projects included in the 10-Year Action Plan are included on the following table.

Table 1-1: VA Estimated Cost of Full SCIP Implementation by Investment Type, by Administration

Estimated Cost of Full SCIP Implementation (\$ in millions)						
	Major Construction	Leases	Minor Construction	Non- Recurring Maintenance	Other	Total Range
VHA	21,361	3,095	7,894	21,463	1,088	49,411 - 60,392

Construction – Major Projects

Budget Request.....\$589,604,000

Appropriation Language

For constructing, altering, extending and improving any of the facilities including parking projects, under the jurisdiction or for the use of the Department of Veterans Affairs, or for any of the purposes set forth in sections 316, 2404, 2406, 8102, 8103, 8106, 8108, 8109, 8110, and 8122 of title 38, United States Code, including planning, architectural and engineering services, construction management services, maintenance or guarantee period services costs associated with equipment guarantees provided under the project, services of claims analysts, offsite utility and storm drainage system construction costs, and site acquisition, where the estimated cost of a project is more than the amount set forth in section 8104(a)(3)(A), of title 38, United State Code, or where funds for a project were made available in a previous major project appropriation, \$589,604,000, to remain available until expended, of which \$5,000,000 shall be to make reimbursements as provided in section 13 of the Contract Disputes Act of 1978 (41 U.S.C. 612) for claims paid for contract disputes: Provided, That except for advance planning activities, including needs assessments which may or may not lead to capital investments, and other capital asset management related activities, such as portfolio development and management activities, and investment strategy studies funded through the advance planning fund and the planning and design activities funded through the design fund, including needs assessments which may or may not lead to capital investments, and salaries and associated costs of the resident engineers who oversee those capital investments funded through this account, and funds provided for the purchase of land for the National Cemetery Administration through the land acquisition line item, none of the funds appropriated under this heading shall be used for any project which has not been submitted to the Congress in the budgetary process: Provided further, That funds provided in this appropriation for fiscal year 2012, for each approved project shall be obligated: (1) by the awarding of a construction documents contract by September 30, 2012; and (2) by the awarding of a construction contract by September 30, 2013. Provided further, That the Secretary of Veterans Affairs shall promptly submit to the Committees on Appropriations of both Houses of Congress a written report on any approved major construction project for which obligations are not incurred within the time limitations established above.

Page Intentionally Left Blank.

Construction, Major Projects

Program Description

The Construction, Major projects appropriation provides for constructing, altering, extending, and improving any VA facility, including planning, architectural and engineering services, assessments, and site acquisition, where the estimated cost of a project is over \$10,000,000, or where funds for a project were made available in a previous appropriation under this heading.

New budget authority of \$589,604,000 is requested for the 2012 Construction, Major, appropriation. The major construction request for medical care supports 7 partially funded projects and 4 new projects, prioritized based on the new Strategic Capital Investment Planning (SCIP) process: New Orleans, LA; Denver, CO; San Juan, PR; St. Louis (JB), MO; Palo Alto, CA; Bay Pines, FL; Seattle, WA; Reno, NV; Los Angeles, CA; and San Francisco, CA. The construction request includes the full funding required to support the gravesite expansion at one National Cemetery (Honolulu, HI). Additionally, funds are provided to remove asbestos from Department-owned buildings, improve facility security, reimburse Treasury's judgment fund, fund resident engineers, fund land acquisitions for National Cemeteries, and to support other construction related activities.

VA has again included an initiative in the Major Construction appropriation to provide funding for resident engineers who provide on-site supervision for Veterans Health Administration (VHA) and National Cemetery Administration (NCA) major construction projects located throughout the country. Funding will cover all costs for these employees including salary and benefits, training, travel, permanent change of station funds, etc.

VA has undergone a profound transformation in the delivery of health care over the past two decades. VA has moved from a hospital-driven health care system to an integrated delivery system emphasizing a full continuum of care. New technology and treatment modalities have changed how and where care is provided, with a significant shift from inpatient to outpatient services. Veterans Health Administration's (VHA) infrastructure was designed and built decades ago, under a different concept of health care delivery (i.e., hospital-centered inpatient care and long admissions for diagnosis and treatment). As a result, VHA's capital assets often do not fully align with current health care needs for optimal efficiency and access; therefore, the capital investment needs are vast.

The goals of VHA's major construction program are to enhance outpatient and inpatient care; to mitigate safety, privacy and seismic deficiencies; and to enhance special programs - such as those addressing spinal cord injury, blind rehabilitation, the seriously mentally ill, and the provision of long-term care -- through the appropriate sizing, upgrading and location of VA facilities.

The goal of NCA's major construction program is to develop additional gravesites at national cemeteries, and to make infrastructure improvements that are critical to achieving the strategic goals and objectives of the National Cemetery. One of VA's strategic goals (Integrated Objective 1) is to ensure that the burial needs of Veterans and eligible family members are met. Achievement of this objective is measured by the percentage of Veterans served by a burial option within a reasonable distance (75 miles) of their residence.

Construction projects that keep existing national cemeteries open by developing additional gravesites and columbaria, or by acquiring additional land, prevent the loss of a burial option for Veterans currently served by a national cemetery within a reasonable distance of their residence. Another VA strategic goal (Integrated Objective 2) is to educate and empower Veterans and their families through proactive outreach and effective advocacy. Achievement of this objective is measured by two key performance measures. The first measure is the percentage of survey respondents who rate national cemetery appearance as excellent. Construction projects such as irrigation improvements, renovation of historic structures, and road resurfacing are important to maintaining our cemeteries as national shrines. In most cases, these types of projects directly impact cemetery appearance, and thereby customer satisfaction.

Major Appropriation Highlights - Summary					
2011					
	2010 Estimate	Budget Estimate	Current Estimate	2012 Request	Increase (+) Decrease (-)
Appropriation	\$1,194,000	\$1,151,036	\$1,194,000	\$589,604	(\$604,396)
Available from existing major projects	\$0	\$0	\$0	\$135,681	\$135,681
Budget Authority	\$1,194,000	\$1,151,036	\$1,194,000	\$725,285	(\$468,715)

* Does not include approximately \$135.7M from available prior year appropriations.

**Summary of Budget Request
(dollars in thousands)**

A construction program of \$725,285,000 is requested for Construction, Major Projects, in 2012, to be financed with new budget authority of \$589,604,000 and additional resources from prior year unobligated major construction funds in the amount of \$135,681,000. A summary of the program funding level by activity follows:

	2012 Request (\$000)
Veterans Health Administration	\$545,404
National Cemetery Administration	\$38,200
General Administration - Staff Offices	\$6,000
Available from Existing Major Projects	\$135,681
Total Budget Resources	\$725,285

Notification of Project and Program Adjustments

VA currently has identified approximately \$381.6M in prior year appropriations that is available to address other VA construction priorities. Of this total, \$154.9 million is committed to fund project and program changes at the six on-going major construction projects listed below (see table below). As described in Chapter 6, approximately \$135.7 million of the remaining \$165.9 million available will be used to fund the 2012 major construction program.

Location	Description	Appropriated Funds	Amount to be Reinvested on Original Project	Purpose of Reinvestment	Amount Available
Las Vegas, NV	New Medical Facility	\$78,314,000	\$73,701,000	Restore scope and solar energy projects	\$4,613,000
Orlando, FL	New Medical Center Facility	\$111,243,000	\$62,001,000	Sim LEARN Center and Energy Projects	\$49,242,000
Fayetteville, AR	Clinical Addition	\$16,000,000	\$13,500,000	Funds used for change orders pending for reprogramming for Parking Garage	\$2,500,000
Gainesville, FL	Correct Patient Privacy Deficiencies	\$8,260,000			\$8,260,000
Lee County, FL	Outpatient Clinic	\$2,000,000			\$2,000,000
Milwaukee, WI	SCI	\$1,919,000			\$1,919,000
Miami, FL	Utility Plant	\$2,843,000	\$2,843,000	Needed for additional project requirements - completion items.	\$0
American Lake, WA	Seismic Corrections	\$1,772,000	\$1,772,000	Needed for additional project requirements - completion items.	\$0
Columbia, MO	Operating Suites	\$1,063,000	\$1,063,000	Needed for additional project requirements - completion items.	\$0
Various NCA Projects		\$60,836,764			\$60,836,764
VHA Working Reserve Balance		\$26,060,406			\$26,060,406
NCA Working Reserve		\$10,466,900			\$10,466,900
Overall Total		\$381,614,834	\$154,880,000		\$165,898,070

Additionally funds are needed for planning and initial design for up to five new National Cemeteries (\$10M) and to fund project changes at the ongoing major construction project at West LA, CA (\$20M). The remaining balance will be kept in reserve for any additional contingencies on projects due to unforeseen issues.

Utilization of Available Previous Construction Appropriations		
Location	Description	Amount Available
Starting Balance	From previous table	\$165,898,070
West LA	Seismic Corrections of 12 Buildings	(\$20,000,000)
NCA - Multiple Locations	Planning and Initial Design for five new cemeteries	(\$10,000,000)
VA - Multiple Locations	Additional Funding for 2012 Major Construction	(\$135,681,000)
	Working Reserve Remaining Balance Going Forward:	\$217,070

Detail of Request (Dollars in thousands)

A construction program of \$725,285,000 is requested for Construction, Major Projects, in 2012, to be financed with new budget authority of \$589,604,000 and additional resources from prior year unobligated major construction funds in the amount of \$135,681,000. A summary of the program funding by activity follows:

**New Orleans, Louisiana
New Medical Facility**

This project replaces the existing medical center in New Orleans that sustained catastrophic damage from Hurricane Katrina. Funding requested in 2012 provides for the construction of the final building, the research building.

I. Budget Authority

Total Estimated Cost	Available Through 2011	2012 Request	Future Request
\$995,000,000	\$935,000,000	\$60,000,000	\$0

II. Priority Score: 2006 - N/A

III. Description of Project

This project constructs a tertiary care medical complex to establish the full continuum of health care services to Veterans in Southeast Louisiana following closure from Hurricane Katrina. The complex will include acute and transitional inpatient beds and the full range of ambulatory services. It will provide an outpatient center, including primary care, mental health, rehabilitation, specialty care, surgical capabilities, and expanded treatment, diagnostic, and ancillary services; a research facility; and two parking structures. The project will comply with all new standards for hurricane hardening and federal security requirements.

IV. Priorities/Deficiencies Addressed

After Hurricane Katrina, the VA Medical Center, New Orleans, closed due to extensive damage. At that time, the medical center played a critical role in caring for patients throughout the Gulf Coast Region from Texas to the Florida Panhandle and central Louisiana. Approximately 40,000 unique patients were treated in 2005.

Upon closure of the facility, the Southeast Louisiana Veterans Health Care System (SLVHCS) established a system of leased clinics as the primary avenue of continuing the multitude of outpatient services to Veterans in Southeast Louisiana. In addition, due to projected workload demands, community based outpatient clinics have been established at five additional locations. This expanded system of clinics supports the outpatient primary and mental health workload and provides Veterans in our service area with basic primary and mental health services, but it creates inefficiencies in coordinating the Veterans' care.

Surgical procedures and inpatient care are currently provided through community providers or at other VA facilities. All complex surgical cases that were referred to New Orleans pre-Katrina are also being purchased in their respective communities or sent to a farther VA facility. This is costly to both the Veteran and to SLVHCS.

Prior to Katrina, VA New Orleans treated Veterans from the entire Gulf Coast region and from the Alexandria area for scarce medical services (cardiac surgery, orthopedics, neurosurgery). SLVHCS will be re-established as a tertiary care referral center to provide the full spectrum of acute and transitional inpatient services for Gulf Coast Veterans upon activation of the new facility to complement the mission of the Gulf Coast Veterans Health Care System and the Alexandria VAMC.

Planning for the transition to its identified mission, SLVHCS is purchasing mobile surgical units to provide some ambulatory surgery procedures. SLVHCS will not be able to perform complex surgical procedures until the new facility opens, providing the full spectrum of services to support inpatient surgery. This and the ability to provide comprehensive inpatient medical care are the principal issues regarding full VA recovery in the New Orleans area.

V. Strategic Goals and Objectives

Restore capability of Veterans with disabilities to the greatest extent possible and improve the quality of their lives: Since the catastrophic event of Hurricane Katrina caused the facility to close, there has been a great reduction in the full spectrum of inpatient and outpatient services once provided by SLVHCS. Inpatient medical, surgical and psychiatric services are non-existent. Veterans often have to travel to other cities, and in some instances to other states, to receive some of the care that they previously received in New Orleans. This project will restore all those services, not only for disabled Veterans, but for all Veterans in the catchment area.

Ensure a smooth transition for Veterans from active military service to civilian life: VISN 16 represents the largest number of soldiers deployed for Operation Enduring Freedom/Operation Iraqi Freedom. Since 2005, the SLVHCS alone has experienced an increase of more than 800 percent in the number of OEF/OIF Veterans enrolled for healthcare. To fully serve these Veterans, a return to the services provided prior to Katrina is critical. This project will provide for Veterans in Southeast Louisiana, and also for those in VISN 16, as SLVHCS is re-established as a referral center.

Honor and serve Veterans: The re-establishment of services in a new, state-of-the-art facility to care for their medical and mental health needs is the ultimate way to honor and serve Veterans.

Promote public health and socioeconomic well being: The city of New Orleans suffered the loss of multiple hospitals after Hurricane Katrina. This significantly reduced availability of medical and mental health services and the number of inpatient medical/surgical beds. Psychiatric beds in New Orleans are very limited. The construction of a new VA medical center will significantly improve delivery of health care and also contribute to the economic recovery of the city.

VI. Alternatives to Construction Considered

Alternative 1 - Status Quo: Under the status quo, the numerous locations leased within the city would be retained, along with fee-based health care services currently in place, to handle inpatient care and surgery. In addition, patients will continue to be transferred out of New Orleans to other VA medical centers. This alternative fails to provide a fully coordinated standard of care for the Veterans of New Orleans and creates inefficiencies. Based on projected future workload, these methods of split care would be further exasperated and would require additional resources to continue to meet demand. This alternative is least preferred.

Alternative 2 – New Construction (preferred alternative): Under this alternative, VA would build a new medical center complex in the bioscience district near both medical school affiliates (Tulane University Medical School and Louisiana State University (LSU) Medical School) and adjacent to the proposed new University Medical Center. This VA medical center would provide all necessary services and would continue to facilitate sharing and collaboration with both medical school affiliates. The VAMC would again become a level 1 tertiary referral center for the VISN 16 Gulf Coast and Alexandria, thereby restoring all services to the Veterans of the area. Groundbreaking occurred on June 25, 2010.

Alternative 3 - Restore and Hurricane-Harden the Existing Medical Center: In this alternative, VA would re-establish the existing Medical Center by restoring it to a condition similar to that before the hurricane. Steps would also be taken to better protect the facility from severe flooding. For example, all critical and sensitive equipment would be moved to higher floors and lower floors would be used for less critical activity (parking, non critical storage, etc.). All damage to equipment and interior finishes from the effects of very high humidity over a long period of time (mold, etc.) would be repaired to the highest degree possible.

Alternative 4 - Major Renovation and Hurricane-Hardening the Existing Medical Center: VA would re-establish a medical center by renovating and remodeling the current facility. The complex would be restored as per Alternative 2, but in addition deficiencies to the 1950's era portions of the complex would also be addressed. All damage to equipment and interior finishes from the effects of very high humidity over a long period of time (mold, etc.) would be repaired to the highest degree possible. Sections of the building would be remodeled to accommodate different modes of operation. For example, as in Alternative 3 all critical and sensitive equipment would be moved to higher floors and lower floors would be used for less critical activity (parking, non critical storage, etc.). The primary engineering and food service infrastructure would be placed above Katrina's anticipated "levee break" flood level. This would involve significant revamping/renovations to the first floor level as well as the construction of a new stand-alone Engineering Utility Plant tower building.

VII. Affiliations/Sharing Agreements

Pre-Katrina, the medical center had active medical affiliations with LSU Medical and Dental Schools and Tulane University Medical School. In 2005, 124 resident positions were allocated to the medical center. In total, over 500 University residents, interns, and other allied health students were trained at the medical center. There were also nursing and Department of Defense (DoD) affiliations with: Charity/Delgado, Dillard, Our Lady of Holy Cross College, LSUHSC, Loyola, University of South Alabama, University of Phoenix, University of Mobile, University of Louisiana at Lafayette, University of Southern Mississippi, Mississippi University for Women, the 926th Air Force, the 1010th Navy, Naval Ambulatory Care Center, and the 4010th US Army Reserve Hospital.

The medical center also had affiliations for physical therapy with Bishop State Community College and Elon College; for pharmacy with Xavier University in New Orleans and University of Louisiana at Monroe; for psychology with SUNY at Stony Brook, SUNY at Buffalo, Emory University, Texas Tech University, and University of Georgia; and for social work with Florida State University, LSU at Baton Rouge, and Southern University of New Orleans.

VIII. Demographic Data*

	<u>2009</u>	<u>2019</u>	<u>2029</u>	<u>Change (2009-2029)</u>

^{2/} Recurring: resources (including staff) necessary to support services to be provided from the space being built or remodeled on an annual basis.

Page Intentionally Left Blank.

Denver, Colorado
New Medical Facility, Phase 3

This project is to construct a new tertiary care medical facility on the same campus as the University of Colorado Hospital complex in Aurora, Colorado, and construct appropriate renewable energy initiatives. Funding requested in 2012 provides for the construction of the final phase of the project for the research and community living center buildings.

I. Budget Authority

Total Estimated Cost	Available Through 2011	2012 Request	Future Request
\$800,000,000	\$758,000,000	\$42,000,000	\$0

II. Priority Score: 2004 - 0.342

III. Description of Project

This project constructs a tertiary care medical complex to establish the full continuum of health care services to Veterans in the Denver market. When all phases of construction are completed the new facility will provide a new inpatient medical center including a Spinal Cord Injury (SCI) Center, an Outpatient Clinic, a Community Living Center (CLC), a Research building, a Central Utility Plant, and parking facilities. In addition, this project includes the remodeling of the recently purchased University of Physicians, Inc. building and the addition of renewable energy initiatives as appropriate.

IV. Priorities/Deficiencies Addressed

The project addresses multiple problems, ranging from correcting the numerous deficiencies associated with an aging facility to closing the distance gap between VA's medical school affiliate, the University of Colorado's Hospital. The Denver medical center is over 60 years old, is inefficient, is space constrained, and will not support the capacity or quality of Veteran care needed for state-of-the-art treatment. The current facility lacks the capability to expand to meet the projected increasing workload demands.

V. Strategic Goals and Objectives

Quality of Life: Restore capability of Veterans with disabilities to the greatest extent possible and improve the quality of their lives: This is achieved through significantly increasing available clinical space to provide for the substantial increases in demand projected for the primary care area. It will also improve Veterans' quality of life with the new outpatient and CLC building. Inpatient care will be provided in a state-of-the-art facility in close proximity to the VAMC's affiliate, ensuring every patient receives the fullest complement of clinical services.

Ensure Smooth Transition: Ensure a smooth transition for Veterans from active military service to civilian life: This is done by providing services in a new state-of-the-art medical

complex of VA, University, State and community programs in the best facilities available in the Rocky Mountain west area. This high level of service ensures the best medical care available, as well as high Veteran satisfaction with the care received and facilities available.

Public Health & Socioeconomic Well-Being: Public health and socioeconomic well-being are enhanced by research conducted by top researchers attracted by state-of-the-art research facilities. Additional research space in close proximity with the University of Colorado will enhance the quantity and quality of research conducted. Clinical education is significantly enhanced by increasing space to match clinical need and patient demand. Education given in a new and enhanced facility promotes excellence in training and reflects positively on the clinical community, as well as patients.

Honor and serve Veterans: The re-establishment of services in a new, state-of-the-art facility to care for their medical and mental health needs is the ultimate way to honor and serve Veterans.

VI. Alternatives Considered

Alternative 1 - Status Quo: Status quo maintains the current services in the existing building. However, this alternative does not allow for the expansion of space needed due to the projected increasing outpatient workload. It also requires a series of complex Minor and Non-Recurring Maintenance (NRM) projects to mitigate the aging facility deficiencies. This option also continues separation from the University for the Veterans serviced by this area. Therefore, this option is deemed as the second least desirable.

Alternative 2 - New Construction (Preferred Alternative): The preferred method will construct a new medical facility, a new outpatient clinic and CLC, and a new Research center. This option is both the most cost effective and the one most likely to positively effect patient satisfaction. It creates sufficient space to meet increased demand, as well as co-locates the medical center with the medical affiliate.

Alternative 3 - Construction of a Health Care Center and Leased Inpatient Beds: This alternative constructs a large outpatient care building, an outpatient clinic and CLC building, and a Research building, as well as parking structures. It also renovates the existing UPI building. However, it leases floors at the University of Colorado hospital for VA to provide inpatient care for the Eastern Rocky Mountain Veterans. This option provides the state-of-the-art infrastructure needed to house VA's highest quality of care, but is the second most cost effective; therefore, this option is the second preferred.

Alternative 4 - Contract Out: This option provides outpatient and inpatient care through various clinical contracts in the community. Based on a cost effectiveness analysis, this option is the most costly; therefore, this option is the least preferred.

VII. Affiliation/Sharing Agreements

Affiliations and sharing agreements exist with the University of Colorado. It is anticipated that with this construction, additional sharing agreements will be arranged.

VIII. Demographic Data*

	<u>2009</u>	<u>2019</u>	<u>2029</u>	<u>Change (2009-2029)</u>
Veteran Population	403,803	358,674	309,114	-23%

**San Juan, Puerto Rico
Seismic Corrections Building 1**

This project seismically upgrades the main hospital building, provides the necessary emergency sustainment features, provides fire sprinklers throughout Building 1, and abates existing asbestos. In addition, a new administrative building, parking structure, and an expansion of the outpatient clinic will be constructed. Funding requested in 2012 will be used to renovate the 1st three floors and demolish the upper floors of Building 1 and will complete an additional parking structure.

I. Budget Authority

Total Estimated Cost	Available Through 2011	2012 Request	Future Request
\$277,000,000	\$176,280,000	\$100,720,000	\$0

II. Priority Score: 2005 - 0.289

III. Description of Project

This project will complete the seismic corrections in the main hospital building of the San Juan VA Medical Center (VAMC) to comply with VA immediate occupancy standards. Asbestos abatement and fire protection are integral parts of the scope of the project. The first phase provided approximately 120,000 sq. ft. of new construction, which will house administrative functions to meet VA life safety standards. Renovation of 10,000 sq. ft. will occur as backfill. Phase two will provide approximately 125,000 sq. ft. of new construction that will house outpatient clinic space on top of the existing outpatient clinic. Phase three will demolish the existing tower of Building 1, and will provide seismic bracing, fire protection and asbestos abatement and renovation of approximately 222,000 sq. ft. Phase 4 will construct a new parking structure.

IV. Priorities/Deficiencies Addressed

The main hospital building, Building 1, does not meet VA seismic standards. Puerto Rico is in a high seismic zone. Several seismic evaluations have validated these deficiencies, such as the Degenkolb Study in 2003, which ranked Building 1 at the San Juan VAMC #6 of 58 most dangerous VA buildings nationwide. This project will complete the seismic corrections of the main building. The project will include asbestos abatement and fire protection as part of the seismic retrofit.

This project will comply with the applicable energy and water efficiency and sustainability mandates specified in Executive Order 13423, "Strengthening Federal Environmental, Energy, and Transportation Management," including the Federal Leadership in High Performance and Sustainable Buildings Memorandum of Understanding; and the Energy Policy Act of 2005; including all published instructions,

standards, and guidance associated with each.

This facility has a significant parking shortage based on a VA parking analysis. This project will mitigate this shortage by constructing two parking facilities.

V. Strategic Goals and Objectives

Quality of Life: Provision of a safe environment will promote high quality of life and reliable care for the benefit and well-being of the Veterans and Department of Defense (DoD) personnel that use the VAMC now and in the future.

Public Health & Socioeconomic Well-being: The San Juan VAMC is affiliated with three major medical schools and has over 50 affiliations with allied health providers. It is the leader of health care education in Puerto Rico. The proposed project will enable the VAMC to provide a safe environment for its patients, students, residents and fellows, and will solidify the VAMC's ability to remain a viable and vital player in the health care education of the community. By being able to sustain operations after an earthquake, the VAMC would be better prepared to respond to local and national emergencies in its role as Coordinator of the Federal Response Plan in Puerto Rico, with close ties to the Federal Emergency Management Agency's Caribbean Area Office.

VI. Alternatives Considered

Alternative 1 - Status Quo: This option leaves the facility in a seismically unsafe environment.

Alternative 2 - New Construction (Preferred Alternative): This option constructs new administrative and outpatient space and seismically upgrades the existing building to ensure the safety of patients, staff and visitors. In addition, this option provides for the increase in projected workload in the most cost-effective manner. Therefore, this option is the preferred alternative.

Alternative 3 - Renovation: While renovation of the existing structures will modernize facilities and increase Veteran access, this option will leave the facility seismically deficient, and thus unsafe. Therefore, this alternative is the second preferred alternative.

Alternative 4 - Contract out: This proposal contracts care to the community. However, the healthcare community in Puerto Rico lacks the capacity to provide care for the existing Veteran workload. Therefore, this option is the third preferred alternative.

VII. Affiliation/Sharing Agreements

The San Juan VA Medical Center has active affiliations with three Liaison Committees for Medical Education (LCME) accredited Medical Schools in Puerto Rico: University of Puerto Rico (UPR), Ponce School of Medicine; and the Universidad Central del Caribe Medical School. Approximately 800 trainees, medical residents, interns, and students are trained at

this facility each year. The San Juan VAMC has institutional and programmatic accreditation from the American Council of Graduate Medical Education (ACGME), plus VA training program accreditations by the American Dental, American Psychology, American Pharmacology and the American Dietetics Associations. There are academic affiliations with 53 associated/allied health programs in 26 different program categories. There are sharing agreements with the US Army and Army Reserve at Fort Buchanan, with the Puerto Rico Air National Guard and with the US Coast Guard for which the VA is the provider of services.

VIII. Demographic Data*

	<u>2009</u>	<u>2019</u>	<u>2029</u>	<u>Change</u> <u>(2009 - 2029)</u>
Veteran Population	120,676	89,494	67,566	-44%
Enrollees	81,530	69,446	56,697	-30%

*Data reflects the Puerto Rico market.

IX. Workload

	<u>Current (2009)</u>	<u>Projected (2029)</u>	<u>Change</u> <u>(2009 - 2029)</u>
Authorized hospital beds	480	252	-48%

Total Operating Costs	\$454,915,000	\$372,733,000

^{1/} Non-recurring: resources necessary to bring the project on-line.

^{2/} Recurring: resources (including staff) necessary to support services to be provided from the space being built or remodeled on an annual basis.

St. Louis (Jefferson Barracks), Missouri
Jefferson Barracks Medical Center Improvements and Cemetery Expansion

This project consolidates the outpatient functions to a single location; relocates and consolidates the VA Employee Education System (EES); relocates the National Cemetery Administration (NCA) administrative operations; and replaces outlying buildings to allow cemetery expansion. Funding requested in 2012 will be in support of: construction of a new energy center, site improvements and other infrastructure improvements.

I. Budget Authority

Total Estimated Cost \$346,300,000	Available Through 2011 \$31,700,000	2012 Request \$80,000,000	Future Request \$234,600,000
--	---	---------------------------------	------------------------------------

II. Priority Score: 2007 - 0.341

III. Description of Project

Upon completion the total project will decrease the amount of infrastructure maintained and operated by the Veterans Health Administration (VHA) through demolition of underutilized buildings (290,000 GSF) adjacent to the cemetery. The demolition of these buildings will provide approximately 30 acres to NCA for expansion of the Jefferson Barracks (JB) National Cemetery. The project will relocate all clinics from Building 1; construct a new tenants building for the relocation and consolidation of the VA Employee Education Service (EES) as well as NCA National Training Center; replace the existing deteriorated, obsolete central boiler/chiller plant with energy efficient heating, ventilating, and air conditioning systems for all remaining buildings on the JB Campus; and construct facilities to relocate the patient aquatic and therapy facility, main chapel, engineering shops, and consolidated warehouse.

IV. Priorities/Deficiencies Addressed

This project will directly benefit the VAMC, EES and NCA at the JB campus. It will improve patient care delivery and staff productivity by consolidating the JB clinics into a single facility. These clinics are currently in the oldest, most outdated building on the JB campus. Frequent infrastructure failures in Building 1 disrupt patient care.

This project will comply with the applicable energy and water efficiency and sustainability mandates specified in Executive Order 13423, "Strengthening Federal Environmental, Energy, and Transportation Management," including the Federal Leadership in High Performance and Sustainable Buildings Memorandum of Understanding; and the Energy Policy Act of 2005; including all published instructions, standards, and guidance associated with each.

V. Strategic Goals and Objectives

One VA: Improve VACO Centralized Programs staff productivity through consolidating EES in one building at JB campus where educational programming is provided. Ensure that the burial needs of Veterans and eligible family members are met by continuing NCA service delivery beyond 2010 through the addition of 30 plus acres for future expansion. Expanding Jefferson Barracks National Cemetery will help achieve this target by continuing to provide a burial option for the approximately 243,100 Veterans currently being served by this national cemetery.

Honor, Serve and Memorialize: An NCA strategic performance target is for 94% of Veterans to be served by a burial option in a national, state, or tribal government Veterans cemetery within 75 miles of their residence. This investment to expand Jefferson Barracks National Cemetery will help achieve that goal.

Public Health & Socioeconomic Well-Being: NCA measures the socioeconomic well-being performance measure by the percentage of respondents who rate the cemetery appearance as excellent. As a VA focal point in the community, this cemetery continues to serve as a starting point for Veterans to inquire about other Veteran services and benefits they may be entitled to. This information will be available through the trained NCA staff working at the cemetery.

Quality of Life: This project will improve patient care delivery and staff productivity by relocating the JB clinics into newly constructed facilities. These clinics are currently in the oldest, most outdated building on the JB campus. Frequent infrastructure failures in Building 1 disrupt patient care. Treatment will improve for patients receiving medical services due to physical plant upgrades.

VI. Alternatives Considered

Alternative 1 - Status Quo: This alternative is not acceptable for the following reasons: Continued deterioration of the existing buildings for lack of future maintenance and repair funds, excessively high energy/utility costs, not eliminating underutilized space in vacant buildings, and closure to new burials in the JB National Cemetery due to lack of available ground.

Alternative 2 - New Construction (Preferred Alternative): Rightsizing the JB campus by demolishing vacant and underutilized buildings and the obsolete boiler/chiller plant, constructing new buildings for relocating outpatient clinics, consolidation and co-location of EES and NCA training facilities, for the chapel, engineering shops, gym/pool and warehouse. This alternative is the preferred solution because it will eliminate underutilized space; it will consolidate and relocate EES and NCA administrative/training facilities; it will construct a new chapel, medical rehab gym/pool, engineering service and consolidated warehouse; it will provide 30+ acres for expansion of NCA JB National Cemetery; and it will improve fire safety and

protection for all buildings at the JB campus by replacement of existing obsolete, high maintenance fire alarm systems.

Alternative 3 – Renovation: Continue to maintain all existing buildings at JB campus, necessitating significant infrastructure repairs. This alternative would require either another Major project or multiple Minor/NRM projects to correct all the infrastructure deficiencies identified in the Facility Condition Assessment (FCA). This alternative would also require the purchase of land adjacent to the existing Jefferson Barracks National Cemetery, currently belonging to St. Louis’ County Park, for future cemetery expansion; however, there is no guarantee that the county park will sell any land to NCA. Jefferson Barracks National Cemetery is the fourth busiest cemetery in VA. Without this land the cemetery will close to new interments by 2017, leaving the Veteran population in the St. Louis, MO, area without access to a burial option.

VII. Affiliation/Sharing Agreements

The St. Louis JB VAMC has medical school affiliations with St. Louis University School of Medicine and Washington University School of Medicine and DoD sharing agreements with Scott AFB.

VIII. Demographic Data*

	<u>2009</u>	<u>2019</u>	<u>2029</u>	<u>Change</u> <u>(2009 - 2029)</u>
Veteran Population	428,241	338,984	273,135	-36%
Enrollees	147,698	166,235	157,312	7%

*Data reflects the Eastern Market

IX. Workload (Medical)

	<u>Current (2009)</u>	<u>Projected (2029)</u>	<u>Change</u> <u>(2009 - 2029)</u>
Authorized hospital beds*	173	127	-27%
Ambulatory stops	66,040	88,671	34%
Mental Health stops	53,973	78,039	45%

*NOTE: In 2009 PRRTIP beds were combined with Psychiatry beds and that changed in 2010 the beds are now considered to be part of the Dom. JB had 25 PRRTIP beds in 2009.

IX. Workload (Burial)

	<u>2009</u>	<u>2014</u>	<u>2019</u>	<u>Change</u> <u>(2009 - 2019)</u>

Palo Alto, California
Centers for Ambulatory Care, Polytrauma, Blind Rehabilitation and Research

This project constructs major construction components including radiology, associated site utilities, building demolition, related impact moves and site development.

I. Budget Authority

Total Estimated Cost	Available Through 2011	2012 Request	Future Request
\$716,600,000	\$194,877,000	\$75,900,000	\$445,823,000

II. Priority Score: 2008 - 0.563

III. Description of Project: This project will construct approximately 600,000 GSF of replacement facilities at VA Palo Alto Health Care System's (VAPAHCS) Palo Alto Division. The project's primary goal is to construct state-of-the-art treatment facilities to facilitate the decommissioning of known seismically and functionally deficient buildings. The replacement facilities include an ambulatory care center, polytrauma/blind rehabilitation center, wet bench laboratory research facilities, recreation therapy programs, parking structures, enhancements to existing site utilities and demolition of known seismically and functionally deficient buildings.

Phase 1 Components: The first phase projects have already been funded. The components include a new 174,000 GSF polytrauma/blind rehabilitation center, 600 stall parking structure, associated site utilities and related impact moves.

Phase 2 Components: The components included in the second phase include a 28,000 GSF aquatic and recreation rehabilitation therapy center, radiology, and a 750 stall parking structure with rooftop helipad. Site development and building demolition is also included.

Phase 3 Components: The components included in the third phase include a 325,000 GSF ambulatory care center and an 85,000 GSF wet laboratory research facility including a vivarium. Site development and building demolition is also included.

Collectively, this project will decommission and raze known seismically deficient, Exceptionally High Risk (EHR), and temporary modular buildings at the Palo Alto Division. Demolition will include 6 permanent buildings, portions of a seventh building, and 4 modular buildings. Razing these buildings will eliminate over 300,000 GSF of seismically and functionally deficient buildings from VA's Capital Asset Inventory (CAI).

Landscaping and other exterior revisions associated with site work, pedestrian bridges/covered walkways, central plant improvements, utility feeds, emergency

power and temporary impact moves, including offsite leased parking lots and temporary onsite parking, have been included within the scope of this project.

IV. Priorities/Deficiencies Addressed: This major construction proposal will replace obsolete, functionally deficient, and seismically unsafe buildings, all of which have been identified as structurally deficient and categorized as Exceptionally High Risk (EHR).

The proposed 174,000 GSF Polytrauma and Blind Rehabilitation Center will consolidate all Palo Alto inpatient and outpatient rehabilitation programs into a world-class rehabilitation center to treat patients diagnosed with complex multi-trauma injuries including TBI, vision impairment and blindness. In addition, the consolidated aquatic therapy center will be sited adjacent to this new rehabilitation facility. Collocating both rehabilitation programs within one center affords tremendous synergies and enhances the continuity of patient care for Veterans diagnosed with TBI and vision impairments including blindness.

The proposed 325,000 GSF Ambulatory Care Center will consolidate nearly all Palo Alto Division outpatient ambulatory care clinics into a world-class treatment facility. Palo Alto Division's outpatient programs are located in numerous buildings throughout the campus. Furthermore, existing ambulatory care clinics cannot adequately accommodate the large influx of new patients and programs due to existing space constraints. The proposed Ambulatory Care Center will be sized appropriately to adequately accommodate projected outpatient demand for ambulatory services.

Over 50% of VAPAHCS' research buildings have known seismic deficiencies and are classified as Exceptionally High Risk (EHR). This project will allow VAPAHCS to consolidate disjointed research activities and provide a safe and modern environment in which to conduct cutting edge scientific research.

VAPAHCS spends over \$1M per year for offsite parking. The rapid influx of new national programs at VAPAHCS' Palo Alto Division, coupled with the increase in new patients and staff, have severely impacted onsite parking. Once completed, the 750 stall parking structure will afford enough onsite parking to allow for the termination of the existing offsite parking lease.

V. Strategic Goals and Objectives:

Quality of Life: To accomplish this objective, VAPAHCS will construct an 80-bed acute psychiatric inpatient replacement facility to eliminate seismically and functionally deficient Building 2. By replacing Building 2, VAPAHCS will maximize the quality and safety of health care provided to Veterans.

Honor and Memorialize: By mitigating Building 2's structural and Life/Safety deficiencies and enabling the highest caliber of service to be executed within state-of-the-art and

seismically safe facilities, VAPAHCS will continue to provide high quality, reliable, accessible, timely and efficient health care for Veterans in a manner that honors the legacy and individual needs of each Veteran.

Public Health & Socioeconomic Well-Being: Through the funding of this initiative, VAPAHCS will create modern and accessible acute psychiatric inpatient facility that will help attract and retain a highly qualified and innovative workforce. The environment of care is a critical component with regard to recruitment and retention initiatives. This proposal will help facilitate the recruitment and retention of a talented workforce that is committed to treating Veterans.

VI. Alternatives to Construction Considered:

Alternative 1 - Status Quo: The “Status Quo” alternative is to continue to provide healthcare in seismically deficient buildings, thus compromising the safety of patients and staff; therefore, this alternative is least preferred.

Alternative 2 - New Construction (Preferred alternative): This alternative would construct a new 325,000 GSF Ambulatory Care Replacement Center, a 174,000 GSF Polytrauma and Blind Rehabilitation Center, an 85,000 GSF Research Center, and a 28,000 GSF Recreation Therapy program. This alternative would decommission and raze known seismically deficient buildings, modular buildings, and other associated buildings and structures impacted by site development.

Alternative 3 – Renovation and New Construction: This alternative would renovate and seismically retrofit Building 4 for wet and dry lab research and construct a new Ambulatory Care Center in Palo Alto. This alternative would mitigate nearly 100,000 GSF of serious structural deficiencies; however, nearly 200,000 GSF of temporary clinical modular buildings and Butler style facilities would still require replacement because these temporary buildings have surpassed their 15 year useful life expectancy. Due to the remaining need to mitigate seismic deficiencies, this alternative is not preferred.

Alternative 4 - Lease: This alternative would lease a 600,000 GSF building in the city of Palo Alto to house both medical and research facilities. Leasing was determined to be a more costly alternative and displaces specialized inpatient and outpatient programs off-site; therefore, this alternative is not preferred.

Alternative 5 - Contract out: This alternative would contract out ambulatory care services and would lease, renovate or replace existing seismically deficient research facilities. This alternative would impact the continuity and continuum of patient care by having these services located off-site or contracted out altogether. This option would also contract out all inpatient Polytrauma and Blind Rehabilitation patients to community providers. TBI and blind rehabilitation services are unique to VA providers and locating

services commensurate to the services VA Palo Alto offers would be difficult. Due to these issues, this alternative is not preferred.

VII. Affiliations/Sharing Agreements

In 2009, GME training was provided to 1,614 medical students, interns, residents and fellows from 208 academic institutions. VAPAHCS' primary academic affiliation is with the Stanford University School of Medicine.

VIII. Demographic Data*

	<u>2009</u>	<u>2019</u>	<u>2029</u>	Change <u>(2009-2029)</u>
Veteran Population	263,480	195,448	150,892	-43%
Enrollees	81,385	82,697	75,632	-7%

*Data reflects the VISN 21 South Coast Market and 55% of Alameda County. Note: Alameda County is a shared county that is serviced by both VAPAHCS and VANCHCS. All of the workload for this county is located within the North Coast market.

IX. Workload

**Bay Pines, Florida
Inpatient and Outpatient Improvements**

This project constructs an addition to the main hospital building (Building 100) at Bay Pines VA Healthcare System, Florida, for a consolidated seriously mentally-ill and Post Traumatic Stress Disorder (PTSD) Center of Excellence, as well as to renovate sections of buildings 1, 100, and 102. Funding requested in 2012 will complete the project.

I. Budget Authority

Total Estimated Cost	Available Through 2011	2012 Request	Future Request
\$158,200,000	\$114,230,000	\$43,970,000	\$0

II. Priority Score: 2009 – 0.662

III. Description of Project

This project will construct an addition to Bay Pines Main Hospital (Building 100), resolving both inpatient psychiatric deficiencies and space gaps in outpatient mental health. It will include an outpatient mental health center of excellence and inpatient psychiatric and geriatric psychiatric bed wards. After the existing psychiatric wards in Building 1 are relocated to the new addition, administrative functions currently located in Building 100 will be relocated to Building 1, creating room for additional outpatient services on the ground level. This project also includes partial renovations to two medical/surgical wards in Building 100, partial renovation to floors two through five in the historic Building 1, and renovation to one wing of Building 102 (Domiciliary).

IV. Priorities/Deficiencies Addressed

This project resolves numerous issues. First, Special Emphasis programs will be enhanced by focusing the physical environment to be therapeutic for PTSD, Sexual Trauma and Serious Mental Illness programs. It also corrects accreditation issues relevant to the aging infrastructure, lack of storage, and lack of patient privacy, as well as correcting identified air quality infrastructure deficiencies. This project eliminates the four-bed room concept and creates smaller patient-group counseling rooms. Access issues will be addressed by constructing and remodeling space for Primary Care, Specialty Care, Outpatient Mental Health, Ancillary and Diagnostic areas, and Inpatient Mental Health. Finally, the project creates efficiency for both patients and staff by co-locating the inpatient and outpatient mental health services.

V. Strategic Goals and Objectives

Quality of Life: Restore the capability of Veterans with disabilities to the greatest extent possible and improve their quality of life and that of their family. By creating private and semi-private settings, patients can focus on their well-being and treatments along with their families.

Public Health & Socioeconomic Wellbeing: Contributes to the public health, emergency management, and socioeconomic well-being for Veterans needing mental health services.

VI. Alternatives Considered

Alternative 1 - Status Quo: This alternative maintains the infrastructure and building envelope as is, with smaller projects renovating and expanding where absolutely necessary. However, this option fails to address existing shortcomings of space shortage, infrastructure deficiencies, and patient privacy issues; therefore, this option is not preferred.

Alternative 2 - New Construction and Renovation (Preferred Alternative): This alternative resolves a large portion of the identified space gap deficiencies, while collocating all inpatient and outpatient seriously mentally ill, sexual trauma and PTSD missions. It resolves a number of the identified Facility Condition Assessment (FCA) deficiencies -- improves energy efficiency, indoor air quality (IAQ), HIPAA and handicap accessibility. Due to the cost effectiveness of this alternative and the impact on the privacy enhancements, this alternative is preferred.

Alternative 3 - Contract Out: This alternative contracts out the current workload as well as the projected workload to the community. Key disadvantages include the inability of the VA to control costs and greater difficulty in managing high quality patient care and performance indices across multiple sites of care. Due to this lack of continuity of care, this alternative is not preferred.

Alternative 4 - Lease: This alternative includes leasing space in the community for the increase in workload. However, this option presents additional challenges by requiring the management of high quality patient care and performance indices across multiple sites of care; therefore, this alternative is not preferred.

VII. Affiliations/Sharing Agreements

The Bay Pines campus is home to the fifth largest VHA Medical Center in the system; the largest VBA Regional Office in the country (serving a single state); and a National Cemetery. This project supports and expands affiliation opportunities with over 40 academic and research affiliates and medical residency programs with five regional hospitals.

VIII. Demographic Data*

	<u>2009</u>	<u>2019</u>	<u>2029</u>	Change (2009- 2029)
Veteran Population	328,658	258,500	208,347	-37%
Enrollees	111,156	118,587	111,045	-0%

*Data reflects VISN 8's Gulf Market

IX. Workload

	<u>Current</u> (2009)	<u>Projected</u> (2029)	Change (2009 - 2029)

Seattle, Washington
Correct Seismic Deficiencies Building 100, Nursing Tower and Community Living Center

This project seismically strengthens Building 100 at the Seattle Campus to correct identified deficiencies. Funding requested in 2012 will allow for the construction of the project.

I. Budget Authority

Total Estimated Cost	Available Through 2011	2012 Request	Future Request
\$51,800,000	\$4,300,000	\$47,500,000	\$0

II. Priority Score: 2009 - 0.548

III. Description of Project

This proposal provides for seismically strengthening Building 100, which contains both the Nursing Tower (NT) and Community Living Center (CLC) at the Seattle Campus. Specifically, this project will replace all braced frame members in Building 100 (NT) and Building 100 (CLC), with buckling restrained braces as well as brace Mechanical, Electrical and Plumbing systems as required in the building's interstitial spaces. The purpose of this seismic renovation project is to enable VA Puget Sound Health Care System (VAPSHCS) to continue delivering world-class health care to Veterans in a seismically safe environment.

Building 100 NT and CLC were built in 1985 and serve as the inpatient wards in the main hospital at the Seattle Division of VAPSHCS. The Seattle campus is the VA tertiary referral center for Veterans living in Alaska, Idaho and Washington. Over 90 percent of all patient activity at this facility goes through Building 100 on any given day, so this project will resolve a critical patient safety issue. Four sections of Building 100 have been identified by VA for seismic renovation. As a major tertiary inpatient facility, the NT in Building 100 ranks 8th and the CLC in Building 100 ranks 16th on the list of Exceptionally High Risk (EHR) Buildings in the VA Seismic Inventory report.

IV. Priorities/Deficiencies Addressed

The Seattle Division of VAPSHCS is located in an area of high seismic activity. The Puget Sound Area has experienced 25 damaging earthquakes since the late 1800's. A 6.0 or greater earthquake is predicted for the region every 10 years. A subsequent risk assessment by Degenkolb Engineers has noted that many VA buildings are at risk of collapse during a design-level earthquake of 6.7 or greater. That equates to a 50 percent chance in every 50-year period of a design-level earthquake in this area. That would be sufficient to cause severe structural damage to Building 100, where the majority of the Seattle Division Veteran population receives their health care.

Building 100 was constructed in 1985, but does not meet the current H-18 seismic code for Washington. The seismic vulnerability and infrastructure deficiencies of this facility have

been cited in the VA's Space and Functional Survey in 2002; a seismic evaluation, retrofit scheme and cost estimate provided by Degenkolb Engineers in 2001; and the VISN 20 Facility Condition Report in 2001.

The State of Washington recently adopted International Building Code (IBC) 2003 to comply with US Geological Survey (USGS) recommendations. USGS revised the IBC to the higher hazard zone, zone three, the second highest hazard level nationwide. Based on this code, and recent evidence that the Seattle Fault is active (this fault is located only two miles north of the Seattle Campus), the current design base shear (a measure of seismic force on the building) results in two to three times the value used in the original design of the structure, which makes the structure seismically vulnerable.

V. Strategic Goals and Objectives

Quality of Life: This project supports the quality of life for the patients and staff by ensuring the buildings are seismically sufficient to withstand earthquakes.

Public Health & Socioeconomic Wellbeing: This project will continue to support the community and ensure safety of students by mitigating the seismic deficiencies. As a teaching hospital, we provide a full range of patient care services with state-of-the-art technology as well as education and research. Comprehensive health care is provided through primary care, tertiary care, and long-term care to almost 62,000 Veterans using our facilities. In order to continue our mission, remain operationally efficient, and verify our sound business principles, we recognize that we must preserve the safety and welfare of our patients and staff by planning for and maintaining the infrastructure in which we provide these health care services.

Honor and Memorialize: The Western Washington Market is home to VAPSHCS as well as several military treatment facilities (Madigan Army Medical Center (MAMC), Navy Hospital Bremerton, Navy Hospital Oak Harbor) and one of the largest debarkation centers on the west coast (Fort Lewis). VA/DoD Sharing between the Department of Veterans Affairs and the Department of Defense is also a top priority of the President and for both Departments. This project improves the quality, efficiency and effectiveness of the delivery of benefits and services to Veterans, service members, military retirees and their families through an enhanced VA and DoD Partnership.

VI. Alternatives Considered

Alternative 1 - Status Quo : In this alternative, seismic deficiencies in Building 100 would not be addressed. As a result the building would not meet existing seismic code requirements. This alternative is not acceptable for the safety of VA patient, visitors, and staff. This could compromise the actual integrity of the existing structure; therefore, this alternative is not preferred.

Alternative 2 – Renovation Seismic Corrections (Preferred Alternative): This alternative seismically braces Buildings 100 NT and CLC and is the most cost effective solution that allows for continued operations during renovation of the existing building. This alternative removes a seismically deficient asset from VHA’s inventory. None of the other alternatives offer the aggregated safety, functional and fiscal advantages of this proposal; therefore, this alternative is preferred.

Alternative 3 - New Construction: In this approach, the existing building is demolished and a new hospital is constructed to current seismic standards. Key weaknesses of this plan include the fact that the campus is land-locked with no available space for staging, and the fact that construction costs are extremely high to complete such a project. This alternative would solve the seismic vulnerabilities on the Seattle campus, however, at a far greater cost and time to implement. This alternative is not preferred.

Alternative 4: Contract Out: This approach calls for the contracting out of all of the core hospital services provided in Building 100 NT and CLC. In addition to being the most costly alternative, this option is fraught with other disadvantages including: non-availability within the local community of sufficient number of beds given the volume of patient care, lack of seamless service to our Veterans with mental health illnesses, providing essential training and research for the community, and interrupting continuity of care to the nearly 16,000 Veterans enrolled with Primary Care providers at the Seattle Campus. Due to the costly nature of this alternative, this option is not preferred.

VII. Affiliations/Sharing Agreements

VA Puget Sound is closely affiliated with the University of Washington. In 2008, VA Puget Sound hosted 591 medical residents in 37 specialties, 20 dental residents in three dental specialties, and 46 medical students. In addition, VA Puget Sound is affiliated with several nursing schools, hosting 560 nursing-auxiliary students and 381 nursing-professional students in 2008. More than 50 other educational institution affiliations across the country resulted in 809 allied health and other trainees in audiology & speech pathology, dental auxiliaries, dietetics, Health Services Research & Development, imaging, mental health, nurse anesthetist, optometry, pharmacy, physician assistant, podiatry, occupational therapy, physical therapy, recreation therapy, social work, psychology, ultrasound technology, radiology technologist, lab phlebotomist, health information management, information technology, and medical informatics. Altogether, VA Puget Sound hosted 2499 trainees in 2008. Over 90 percent of these students, residents and interns receive a portion of their training in programs housed in Building 100.

Fort Lewis, MAMC, Naval Hospital Bremerton, Naval Hospital Oak Harbor and local National Guard and Reserve units are all affected by this seismic project. There is a 35-year history of VA/DoD sharing agreements and initiatives for a wide array of inpatient, outpatient, and ancillary services, as well as clinical and administrative training.

Page Intentionally Left Blank.

Reno, Nevada
Correct Seismic Deficiencies and Expand Clinical Services, Building 1

This proposal provides for the renovation of Building 1 to correct seismic, life safety and infrastructure deficiencies, and then to consolidate outpatient and clinical research programs into a state-of-the-art treatment facility that supports the VA Sierra Nevada Health Care System's (VASNHCS) Reno VA Medical Center located in Reno, NV.

I. Budget Authority

Total Estimated Cost*	Available Through 2011	2012 Request	Future Request
\$213,800,000	\$0	\$21,380,000	\$192,420,000

* Total estimated cost may be revised based on completed design of the project.

II. Priority Score: 2012 - 0.4808

III. Description of Project

This project proposes to completely renovate Building 1, consisting of 138,007 gross square feet (GSF) of space, by seismically correcting the building as well as correcting all facility condition assessment (FCA) deficiencies. Additionally, this project proposes to construct a 30,102 GSF clinical expansion, as well as a 5,000 GSF research expansion, to correct space deficiencies identified in the 2018 projected space gap. Upon completion, Building 1 will be transformed into a 165,000 GSF modern structure supporting healthcare for Veterans.

The following programs will be impacted and will benefit from the proposed project: Mental Health, Dental, Compensation and Pension, Audiology, Patient Admissions and Testing, Surgical Service, Quality Management, Veteran Service Officers, Warehouse, Voluntary Services, Veterans Eligibility Center, Geriatrics and Extended Care, Dietetics, In-patient Kitchen, Morgue, Laboratory and Pathology Services, Research, Surgical Service, Medical Service, Ambulatory Care (Patient Centered Medical Home), OEF/OIF, and the Women's Health Clinic.

IV. Priorities/Deficiencies Addressed

This project will correct potentially hazardous infrastructure deficiencies, as well as consolidate outpatient programs and clinical research into a state-of-the-art treatment facility. Foremost, this project will correct seismic deficiencies found in Building 1, as the building was indentified on VA's list of Exceptionally High Risk (EHR) improvements with seismic deficiencies. In addition, this project will address all life safety and infrastructure deficiencies identified in the building's most recent FCA report, totaling more than \$62 million.

The proposed project will address all space deficiencies identified at the site, as Building 1 is undersized to meet the projected demand for services. The ten-year

projections for the Reno's market show significant increases in space gaps for ambulatory services of 30,102 GSF space gap as well as right-sizing the clinical research program by adding 5,000 GSF.

V. Strategic Goals and Objectives

Perform Research and Development to Enhance the Long-Term Health and Well-Being of Veterans: Upon completion, Building 1 will support all of the research and development activities to be performed by the VAMC. The renovation of this building will therefore help to enhance research and development activities on the site which are aimed at increasing the long-term health and well-being of Veterans.

Expand Health Care Access for Women Veterans: This project will support the entire women's health clinic. Currently the women's health clinic is designated as two exam rooms with a shared bathroom and small waiting area. Given current projections for women's health services in the Sierra Nevada market area, the existing space allocated to these services is insufficient to meet future demand. The expansion in Building 1 will provide sufficient space to satisfy this unmet need.

Improve Veterans Mental Health: This project will support a large portion of mental health services at the Reno VAMC, as demand for these services is anticipated to increase by 67% locally over the next 10 years.

VI. Alternatives to Construction Considered

Alternative 1 – Status Quo: The status quo alternative would maintain operations within Building 1. This alternative is not the most optimal given that the building is functionally deficient and has significant seismic deficiencies. This alternative does not allow for correction of life safety or infrastructure deficiencies, nor does it allow for the required clinical and research expansions needed to keep pace with the projected increase in workload. Existing infrastructure issues also hamper the facility's effort to reduce energy consumption by 30% by 2015. Moreover, the status quo alternative would also require a series of Minor Construction and Non-Recurring Maintenance (NRM) projects to mitigate aging facility deficiencies. This alternative is the least preferred.

Alternative 2 – New Construction (Preferred alternative): This alternative proposes to completely renovate Building 1, as well as construct clinical and research expansion additions to address seismic, life safety, infrastructure and asbestos issues and more effectively meet the needs of Veterans and employees. The clinical addition would also allow for VASNHCS to meet the projected demand in utilization of services and care. This alternative is the most cost effective and would provide a safer, more functional and effective healthcare environment for the benefit of Veterans, Veterans' families, and medical staff, and is therefore the preferred alternative.

Alternative 3 - Contract Out Services: This alternative would seek to contract out all services currently provided in Building 1 to various private health care providers throughout the local Reno, Nevada community. This alternative is anticipated to increase annual costs. In addition, this alternative may face absorption challenges, as there is limited existing capacity within the community to accommodate VA's workload. Therefore, this alternative is not the most optimal.

Alternative 4 - Lease: This alternative would allow for adequate, safe space for clinical operations, but was considered a less viable alternative as the relocation of staff and services, currently located in Building 1, to an off-site location would have a significant negative impact on the facility's efficiency in providing a continuum of patient care. Additionally, leasing costs in the Reno, Nevada, area would make this alternative less cost-effective than the preferred alternative. Due to these inefficiencies, this option would be the second preferred.

VII. Affiliations/Sharing Agreements

This project supports and expands affiliation opportunities with the Department of Defense (DoD). This investment in Building 1 will provide the necessary space to expand clinical services, including Mental Health, OEF/OIF, and Women's Health, which in turn would position VA more favorably to explore new partnerships and collaborations with DoD.

West Los Angeles, California
Build New Essential Care Tower, Correct Seismic Deficiencies and Renovate
Building 500

This proposal provides for the construction of a new bed tower, the seismic retrofit of Buildings 500 and 501, as well as renovation to the existing bed tower, Building 500, to consolidate services across the West Los Angeles VA Medical Center in Los Angeles, CA.

I. Budget Authority

Total Estimated Cost*	Available Through 2011	2012 Request	Future Request
\$1,027,900,000	\$0	\$50,790,000	\$977,110,000

* Total estimated cost may be revised based on completed design of the project.

II. Priority Score: 2012 - 0.3688

III. Description of Project

This project will seismically correct building 500, construct a new bed tower, consisting of approximately 450,000 gross square feet (GSF), add a parking garage, expand the energy plant to support new construction and energy saving enhancements, infrastructure improvements to support new construction and renovation, and site work. It will also seismically retrofit Building 501, the facility's chiller plant.

Seismic work will be performed to meet seismic standards mandated by Federal and State law for all acute care facilities throughout California and to provide state-of-the-art outpatient facilities. Upon completion of the project, numerous clinical outpatient services from the north side of the West Los Angeles campus will be relocated to Building 500.

IV. Priorities/Deficiencies Addressed

Building 500 is the highest-priority project in need of mandatory seismic correction on the Exceptionally High Risk list prepared by Degenkolb Engineers. Building 500 will be modified to have adequate strength in the interior and exterior braced frames to resist the design lateral forces. In addition, the frame-to-frame and interior building core collectors will be strengthened to adequately transfer lateral forces to the braced frames. This, together with the non-structural seismic corrections, will bring this building into compliance with VA, State and Federal requirements.

V. Strategic Goals and Objectives

Eliminate Veteran Homelessness: Upon the completion of the multiple phases of this project, the services currently provided in the North Campus buildings will be relocated to the newly modernized and seismically strengthened Building 500, making the North campus buildings available for a potential Enhanced-Use Lease to develop housing for Veterans and help eliminate Veteran homelessness.

Improve Veterans Mental Health: The project will assist in improving the mental health of Veterans, as it allows for the consolidation of mental health services into the same location as other medical services provided at the West Los Angeles VAMC. This project will allow for improved care by allowing Veterans to receive all their healthcare needs in one location, as well as by providing greater opportunity for providers to interact more directly, given the improved adjacency of services.

Expand Health Care Access for Women Veterans: The construction of the new bed tower includes the development of private inpatient rooms. Outpatient areas will also be redesigned to better accommodate the privacy needs of women.

VI. Alternatives to Construction Considered

Alternative 1 - Status Quo: The status quo alternative does not address the seismic deficiencies of the building, leaving the patients and staff in a vulnerable situation in the event of an earthquake in the West Los Angeles location. Therefore, this option is not the most optimal.

Alternative 2 - Renovation and New Construction (Preferred alternative): This option proposes to construct a new 450,000 GSF bed tower, seismically upgrade the existing Building 500, and then renovate Building 500 to create a modern, Veteran-centric environment for patients. This option is the most economical solution and the most optimal method of closing all identified gaps.

Alternative 3 - Contract Out Services: This option contracts the existing inpatient and outpatient services to neighboring medical facilities. However, due to the significant number of Veterans served, the community hospitals do not have the capacity to cover the workload. Therefore, the contract out scenario is a challenging alternative to fulfilling the requirements of the facility; therefore, this option is the least preferred.

Alternative 4 - Lease: This option leases inpatient and outpatient space to provide the services currently provided in Building 500. Finding adequate lease space is a significant problem for the West Los Angeles area as well as a costly one. Therefore, this option is not considered the most optimal.

VII. Affiliations / Sharing Agreements

Current affiliations exist with the University of California in Los Angeles, with over 100 teaching physicians and 400 residents and students at the West Los Angeles VAMC Campus.

VIII. Demographic Data:*

	<u>2009</u>	<u>2019</u>	<u>2029</u>	<u>Change</u> <u>(2009-2029)</u>
Veteran Population	1,155,470	884,129	713,078	-38%
Enrollees	368,823	372,573	339,257	-8%

*Data reflects the VISN 22 California Market

IX. Workload:

San Francisco, California
Correct Seismic Deficiencies in Buildings 1, 6, 8, and 12

This proposal provides for the seismic replacement of Building 12 and the seismic retrofit of Buildings 1, 6 and 8 at the San Francisco VA Medical Center in San Francisco, CA.

I. Budget Authority

Total Estimated Cost*	Available Through 2011	2012 Request	Future Request
\$224,800,000	\$0	\$22,480,000	\$202,320,000

* Total estimated cost may be revised based on completed design of the project.

II. Priority Score: 2012 - 0.3667

III. Description of Project

This project proposes to demolish Building 12 and then construct a new, state-of-the-art medical facility at an expanded size of 75,000 gross square feet (GSF) at the San Francisco VA Medical Center (SFVAMC). The project also proposes to seismically retrofit Buildings 1, 6 and 8 to correct potentially hazardous seismic, life safety and infrastructure deficiencies. As part of this project, research program space will be transferred from Buildings 1 and 6 to the new, replacement Building 12. Building 1 will be renovated to house clinical office space in order to allow decompression of Building 203, the main hospital, and Building 200, the main ambulatory care support building. Building 6 will retain administrative services, while Building 8 will retain ambulatory mental health and research functions. Finally, 250 additional parking spaces will be provided to reduce the current 750-space deficiency at SFVAMC.

IV. Priorities/Deficiencies Addressed

This project will correct potentially hazardous seismic, life safety and infrastructure issues at the SFVAMC and consolidate clinical and research space to alleviate congestion throughout the campus. It addresses the four remaining seismically Exceptionally High Risk (EHR) buildings at the SFVAMC, bringing three into compliance with VA's seismic standards through retrofitting, and the fourth by demolition and replacement. Buildings 1, 6, 8 and 12 are all approximately 70 years old and were constructed with concrete shear walls, which qualify them for the second-highest seismic category ranking, which includes buildings that may not collapse, but would be heavily damaged and would not remain operational after a seismic event. The four buildings total 154,457 GSF, which accounts for roughly 15% of the entire campus. The project also addresses a severe research space gap of 335,000 GSF and reduces the SFVAMC parking shortage.

V. Strategic Goals and Objectives

Eliminating Veteran Homelessness: This project will continue to assist the staff members of the SFVAMC Mental Health and Social Work program by modernizing Building 8 to

current mental health standards. The services currently provided in Building 8 include one of VA's first Comprehensive Homeless Centers, which has helped to alleviate some of the burdens associated with homelessness for many of the area's homeless Veterans.

Improve Veterans Mental Health: This project will play a crucial role in modernizing Buildings 1 and 8, which ensures the safety of patients, staff and employees for services provided in these facilities: substance abuse methadone clinic, mental health clinics, Post Traumatic Stress Disorder (PTSD), depression and suicide prevention.

Perform Research and Development to Enhance the Long-Term Health and Well-Being of Veterans: The modernization of Buildings 1, 8, and 12 play a critical part in the SFVAMC's ability to perform research and development to enhance the long-term health and well-being of Veterans. Buildings 1 and 12 together house many biomedical investigators, while Buildings 8, 11 and 13 house Mental Health and Neuro-diagnostic programs with direct research programs impacting OEF/OIF Veterans, including programs for traumatic brain injury and PTSD.

VI. Alternatives to Construction Considered

Alternative 1 - Status Quo: The status quo alternative assumes that no upgrades or renovations are performed to improve the seismic, functional and technical deficiencies associated with Buildings 1, 6, 8 and 12. Given the seismic status, the degree of deficiencies identified, and the overall risk to the SFVAMC associated with these four buildings, this alternative is the least preferred.

Alternative 2 - New Construction and Renovation (Preferred alternative): This preferred alternative is a hybrid strategy that replaces and expands Building 12, as well as retrofits historical Buildings 1, 6 and 8. Under this alternative, Building 12 would be demolished and rebuilt at a size of 75,000 GSF (approximately 36,000 GSF larger than the current facility). This addition reduces the 335,000 GSF research space gap, and consolidates research services on the northwest side of the campus. Building 1 would assume a new function as a clinical support building, alleviating congestion in Buildings 200 and 203. Building 6 will remain an administrative building and Building 8 will remain the main mental health and administration building. In addition, a 250-car garage is planned to accommodate the increase in research staff brought onto the campus as a result of the expansion of Building 12. This option is the most cost effective and would provide a safer, more functional and effective healthcare environment to the benefit of Veterans, Veterans' families and medical staff, and is therefore the preferred alternative.

Alternative 3 - Contract Out Services: This alternative would seek to contract out all services currently provided in Buildings 1, 6, 8 and 12 to various private health care providers throughout the local San Francisco community. Contracting out the Mental Health outpatient services as well as only a portion of the clinical services to

decompress Buildings 200 and 203 would disrupt the continuum of care for patients. It is essential for the health of patients, especially Mental Health patients, to have a full continuum of care with the same physicians and standards of care. As a result, this alternative is not the most optimal.

Alternative 4 - Lease: This alternative would require that VA relocate services in Buildings 1, 6, 8 and 12 to approximately a 154,000 GSF medical building in the greater San Francisco community. This alternative would be the least cost effective due to the high costs associated with outfitting space in the private sector. It is also unclear how likely finding a leased facility of this magnitude in the nearby San Francisco market would be. Therefore, this alternative is the second preferred.

VII. Affiliations/Sharing Agreements

This project supports and expands affiliation opportunities with the University of California San Francisco (UCSF) School of Medicine, from which over 130 residents and 200 attending physicians and research principal investigators provide services. A total of 35 affiliated universities, colleges and institutes of higher learning maintain affiliations with SFVAMC. Each year, a total of 428 students and trainees rotate through this tertiary medical care center.

VIII. Demographic Data*

	<u>2009</u>	<u>2019</u>	<u>2029</u>	<u>Change (2009-2029)</u>

Honolulu, Hawaii
National Memorial Cemetery of the Pacific
Expand Columbarium and Replace Administration Building

Proposal is to construct an expansion of, and improvements to, the VA National Cemetery.

I. Budget Authority

Total Estimated Cost	Available Through 2011	2012 Request	Future Request
\$23,700,000	\$0	\$23,700,000	\$0

II. Priority Score: 2012 - 0.4353

III. Description of Project

This project provides for columbarium development at the National Memorial Cemetery of the Pacific. Located in Honolulu, Hawaii, the cemetery serves approximately 105,000 Veterans in the State of Hawaii, conducting 1,052 interments in 2009 and over 50,000 interments since opening in 1948. The National Memorial Cemetery of the Pacific is projecting depletion of columbarium niche space by 2017. This project will develop new columbarium niches to provide an estimated fifteen additional years of capacity.

The project will develop approximately 9,000 columbarium niches in two separate areas, one on the western side of the cemetery where the maintenance facility is currently located, and a second in the southeastern section of the cemetery where the existing administration building and public restroom is currently located. The existing buildings will be demolished and replaced in different locations. In addition to the columbarium development and new building construction, the project will provide Memorial Walls; improvement of phase one columbarium caps; electronic message board; replacement of the existing signage and site furnishings throughout the cemetery; utilities, irrigation for areas of development, together with supporting infrastructure; access roads; energy (LEED) improvements; global positioning system site integration; environmental and historic preservation mitigation as needed; and road improvements. New buildings will incorporate enhanced information technology and physical security requirements. Renewable energy measures will be incorporated.

IV. Priorities/Deficiencies Addressed

Without this investment, the National Memorial Cemetery of the Pacific will deplete its inventory of available columbarium niches and the cemetery will close to first interments in 2017. Infrastructure improvements will allow the cemetery to maintain its status as a National Shrine. The current administration and visitor complex was originally built as a lodge for the cemetery director in 1948. The maintenance facility dates from the same period. Both have exceeded their useful life. This project will demolish those two structures

and provide modern facilities better able to meet the needs of visitors and family members. Moreover, this project will move the two functions out of the visible burial areas on the floor of the Punchbowl crater and replace them with interment facilities within the dramatic setting of this extinct volcano. Expansion will provide for continued access to a burial option in this national cemetery for over 83,000 Veterans who reside within 75 miles of the cemetery, plus approximately 22,000 Veterans who live in Hawaii but beyond 75 miles from Honolulu. In addition, many other Veterans from around the country seek burial in this location because of its unique association with Pearl Harbor and World War II in the Pacific. In 2009, the National Memorial Cemetery of the Pacific was the 32nd busiest cemetery based on interment workload. The National Memorial Cemetery of the Pacific conducted 1,052 interments in 2009 and over 50,000 interments since opening in 1948.

V. Strategic Goals and Objectives

Integrated Objective 1: Make it easier for Veterans and their families to receive the right benefits, meeting their expectations for quality, timeliness and responsiveness. Achievement of this objective is measured by the percent of Veterans served by a burial option within a reasonable distance (75 miles) of their residence.

National Memorial Cemetery of the Pacific serves approximately 83,000 Veterans who live within 75 miles of the cemetery. VA established a 75-mile service area standard because NCA data show that more than 80 percent of persons interred in a national cemetery resided within 75 miles of the national cemetery at the time of their deaths. Columbarium niches for cremation interments are expected to be depleted by 2017, closing the cemetery to first interments. This project will provide for approximately 9,000 columbarium niches, helping to ensure that NCA can achieve its strategic target to provide 94 percent of Veterans with access to a burial option within a reasonable distance (75 miles) of their residence.

Integrated Objective 2: Educate and empower Veterans and their families through proactive outreach and effective advocacy. Achievement of this objective is measured by two key performance measures. The first measure is the percent of survey respondents who rate national cemetery appearance as excellent. Construction projects such as irrigation improvements, renovation of historic structures, and road resurfacing are important to maintaining our cemeteries as national shrines. In most cases, these types of projects directly impact cemetery appearance and, thereby, customer satisfaction.

The National Memorial Cemetery of the Pacific is unique in terms of preserving our history, nurturing patriotism and honoring the service of our military. It is the only National Cemetery located on ground that was attacked by a foreign enemy in the 20th Century. The first burials were of service members who lost their lives in the fighting that took place in World War II in the Pacific Theater. Hundreds of Americans who died in the December 7, 1941, attack on Pearl Harbor are buried at the cemetery along

with approximately 12,000 who died in combat operations across the Pacific Theater. In all, 2,922 burials from World War II and the Korean War are unknown. Thousands of Veterans and eligible family members have been interred in the cemetery since 1948, including Veterans of the Boxer Rebellion, the Spanish-American War and all the wars of the 20th Century, notably including hundreds of World War II Veterans of the 442nd Regimental Combat Team, comprised exclusively of Americans of Japanese Ancestry. The National Memorial Cemetery of the Pacific houses the impressive Honolulu Memorial of the American Battle Monuments Commission and commemorates the service of approximately 33,000 service members from World War II, Korea and Vietnam who are missing in action. Given the significance of the site's history, the cemetery attracts heads of state, including the President of the United States and the Emperor of Japan, high-level diplomatic and military figures, and national Veterans service organization leadership for dozens of commemorative events each year. The cemetery is also a site of great natural beauty. In addition to the dramatic setting within the walls of an extinct volcano, the rim of the crater offers an unparalleled view of Honolulu. Thousands of tourists come to view the panorama and learn more about the sacrifices that have been made to keep the United States free. This project will help maintain the historic importance, beauty and significance of the cemetery. Foreclosing the opportunity for interment in this historic location will diminish its significance.

In the 2009 Survey of Satisfaction with National Cemeteries, the appearance of National Memorial Cemetery of the Pacific was rated as excellent by 100 percent of respondents. This is an outstanding record and the work contemplated in this project will enable the cemetery to continue to meet the NCA strategic target of 100 percent. NCA's survey also asks respondents whether the availability of restrooms is able to accommodate visitors to the cemetery. On this measure, 64 percent agreed that restrooms were adequate. This measure falls below the NCA average of 77 percent. This project would enable the cemetery to improve service in this important measure.

VI. Alternatives Considered

Four alternatives were considered: a major construction project, several minor projects to accomplish the same goals, a state Veterans cemetery funded through the VA State Cemetery Grants program, and a no-action option.

Status Quo - No action will result in the national cemetery depleting its available columbarium niches by 2017. This alternative would close the cemetery to first interments.

Major Construction Project - This option was selected because it meets the demand for service and consolidates all requirements in a single project. This option will result in the least disruption to the cemetery's burial operations and the least negative impact on Veterans and their families.

Multiple Minor Construction Projects - While providing the same results as the major project, this alternative would require a longer timeframe. It would also result in the cemetery being in a constant state of disruption over many years as the smaller projects are sequentially constructed. This alternative would also increase the cumulative cost of the improvements.

Construct a State Veterans' Cemetery - A state Veterans cemetery currently exists on the island of Oahu. Burial in the cemetery, however, is not open to residents of other states.

Construction, Major Advance Planning Fund

I. Budget Authority

2012 Request Veterans Health Administration (\$000)	\$59,145
2012 Request National Cemetery Administration (\$000)	\$4,500
2012 Request General Administration (Staff Offices) (\$000).....	\$6,000
Total	\$69,645

II. Description of Program

This request includes \$69,645,000 in Advance Planning Funds (APF) for support of the Veterans Health Administration (VHA), National Cemetery Administration (NCA), and General Administration/Staff Offices.

VA uses APF for developing the scope for design of Major Construction and other requirements such as electrical, plumbing, communications, transport, roadway circulation, heating, ventilation and air conditioning, water supply, drainage and others. Refined project requirements result in more accurate cost estimates, whether referring to VHA or NCA.

The APF is also used in the VHA arena for assessments of health care needs, design programs and needs assessments that may or may not lead to capital investments and other capital investment activities, such as portfolio development and management activities and investment strategies.

The fund can also be used for utilities and capital facilities studies, to develop public-private ventures (enhanced-use leases), to prepare master facility plans, historic preservation plans, conduct environmental assessments and impact studies, energy studies or audits, and design- and construction-related research studies, including post-occupancy evaluations. The advance planning fund request includes funds for activities such as master planning for expansion at existing national cemeteries and environmental assessments at national cemeteries.

The funds are also utilized to maintain construction standards, such as: design guides, design standards, specifications, and space criteria.

III. Background/Justification

In order to accomplish effective design, it is necessary to resolve functional and scope issues early in the planning process. VA utilizes a three phase design process similar to that used in the private sector. The schematic design and design development

evaluates alternative design concepts, establishes functional interrelationships, establishes floor plan layouts, and selects all building systems. The contract document preparation phase produces the detailed construction drawings that enable a contract to be entered into. This line item provides funding through the schematic and design development phases and equates to approximately 35% of total design.

This funding is needed to carry out planning and project development activities for projects to be submitted in future budget requests for construction documents and construction funding as well as supporting capital facility related studies.

2011					
	2010 Actual	Budget Estimate	Current Estimate ¹	2012 Request	Increase (+) Decrease (-) from 2010

General Administration (Staff Office)	\$5,000	\$6,000	\$5,000	\$6,000	\$1,000
Total	\$141,960	\$115,750	\$141,960	\$69,645	(\$72,315)

1/ Reflects the Annual Continuing Resolution Funding Level

Construction, Major Asbestos and Other Airborne Contaminates

I. Budget Authority

2012 Request (\$000).....	\$40,000
---------------------------	----------

II. Description of Program

The Environmental Protection Agency Regulation 40 CFR, Part 61, is intended to protect the environment from asbestos emissions and OSHA Regulation 29 CFR, Part 1910, is intended to protect people in the workplace. These regulations allow for several possible means of controlling airborne contamination, including removal and containment. 40 CFR, Part 61, Subparts A & B, and 29, Part 1910 prescribe measures to be taken to reduce health hazards caused by breathing airborne contaminants (i.e., asbestos fibers, lead paint particles, etc.). The hazards must be addressed when buildings are remodeled or demolished, and when airborne concentrations exceed defined levels.

III. Background/Justification

Asbestos has been identified in Department of Veterans Affairs buildings, and a study was undertaken to determine the extent and intensity of the hazard these materials present. A substantial amount of removal work is required to meet current code requirements. Disturbance of this asbestos during renovation will require costly precautions to avoid hazards. When asbestos health hazards at Department of Veterans Affairs facilities have been identified and evaluated in association with a construction project, they will be abated in the most cost-effective manner.

	2011				2012 Request	Increase (+) Decrease (-) from 2010

Construction, Major Facility Security Projects

I. Budget Authority

2012 Request (\$000).....	\$8,000
---------------------------	---------

II. Description of Program

This fund will be used to incorporate increased physical security protection measures, structures, and/or equipment at new projects.

III. Background/Justification

VA is currently conducting security vulnerability assessments as required by National Security Policy Directives, Presidential Decision Directives and Congressional Laws, including Presidential Decision Directive/NSC-63, Public Law 107-188, and Executive Order 12656. These reviews identify areas within existing facilities that are at risk to threats from internal and external sources. These reviews also help to develop specific design criteria that will be incorporated into all new Major projects. Remediation, elimination or avoidance of at-risk physical plant or structures, identified through the assessments or from the new design criteria, will be funded through this line item.

	2011				Increase (+) Decrease (-) from 2010

Construction, Major Resident Engineers

I. Budget Authority

2012 Request (\$000).....	\$24,200
---------------------------	----------

II. Description

This request provides for the resident engineers who provide on-site supervision of major construction projects. Funding will cover all costs for these employees including salary, training, travel, permanent change of station funds, etc.

III. Background/Justification

Funding in the amount of \$24,200,000 is requested to support resident engineers on Veterans Health Administration (VHA) and National Cemetery Administration (NCA) major construction projects. This funding will support approximately 140 resident engineers and associated costs at nearly 50 sites across the country.

Currently, staffing for Major Construction projects is funded from the General Operating Expense (GOE). Because these resident engineers are still organizationally accountable to the Office of Construction and Facilities Management (OCFM), these funds will be used to reimburse the GOE account, which funds OCFM as a subcomponent of the Office of Acquisition, Logistics, and Construction. (See the OALC chapter in Volume 3 of the Congressional Justifications.)

Construction, Major Judgment Fund

I. Budget Authority

2012 Request (\$000).....	\$5,000
---------------------------	---------

II. Description of Program

This request provides funding for VA to reimburse the Judgment Fund for the payment of settled claims.

III. Background/Justification

The Judgment Fund, 31 U.S.C., Section 1304, was established by Congress to ensure a source of funds for prompt payment of final judgments and awards. The intent of the judgment appropriation is to expedite the payment of claims and settlements. The Department of Veterans Affairs should submit settlements to the General Accounting Office for expected payment from the Judgment Fund. VA must reimburse the Judgment Fund when monies have been appropriated.

	2011				Increase (+) Decrease (-) from 2010

Page Intentionally Left Blank.

Construction, Major NCA Land Acquisition Fund

I. Budget Authority

2012 Request (\$000).....	\$10,000
---------------------------	----------

II. Description of Program

This request provides funding for new land acquisitions for the National Cemetery Administration.

III. Background/Justification

The 2012 budget request includes \$10 million for the land acquisition line item in the Major Construction account. These funds will provide NCA the flexibility to acquire land when an opportunity arises and not be encumbered by the timing of the budget process. Identifying and purchasing a parcel of land can be a difficult and unpredictable process. Oftentimes, prospective sellers – particularly estates – desire to move more quickly than the multi-year pace of the Federal budget development and approval process.

NCA currently has the legal authority to acquire land for the national cemeteries and to expand existing cemeteries. Any purchase of land through the line item must be approved by the Secretary of VA.

Construction – Minor Projects

Budget Request.....\$550,091,000

Appropriation Language

For constructing, altering, extending, and improving any of the facilities, including parking projects, under the jurisdiction or for the use of the Department of Veterans Affairs, including planning and assessments of needs which may lead to capital investments, architectural and engineering services, maintenance or guarantee period services costs associated with equipment guarantees provided under the project, services of claims analysts, offsite utility and storm drainage system construction costs, and site acquisition, or for any of the purposes set forth in sections 316, 2404, 2406, 8102, 8103, 8106, 8108, 8109, 8110, 8122, and 8162 of title 38, United States Code, where the estimated cost of a project is equal to or less than the amount set forth in section 8104(a)(3)(A) of title 38, United States Code, \$550,091,000, to remain available until expended, along with unobligated balances of previous “Construction, minor projects” appropriations which are hereby made available for any project where the estimated cost is equal to or less than the amount set forth in such section: Provided, That funds in this account shall be available for: (1) repairs to any of the nonmedical facilities under the jurisdiction or for the use of the Department which are necessary because of loss or damage caused by any natural disaster or catastrophe; and (2) temporary measures necessary to prevent or to minimize further loss by such causes.

Minor, Program Description

The Construction, Minor projects, appropriation provides for constructing, altering, extending and improving any VA facilities, including planning, assessment of needs, architectural and engineering services, site acquisition and disposition, where the estimated cost of a project is equal to or less than \$10,000,000.

Page Intentionally Left Blank.

--------------------	---------------

II. Description/Justification of Program

The minor construction program is an integral component of VHA's overall construction program and permits VA to address space and functional changes to efficiently shift treatment of patients from hospital-based to outpatient care settings; realign critical services; improve management of space, including vacant and underutilized space; improve facility condition; and other actions critical to the Strategic Capital Investment Planning (SCIP) implementation. VHA's 2012 request will address the system's most critical minor construction needs by funding efforts such as facilitating infrastructure rightsizing; enhancing women's health programs; providing additional domiciliaries to further address Veterans' homelessness; improving access, including providing additional parking where needed; improving safety; improving access to healthcare; transforming community living centers to be more Veteran-centric; enhancing patient privacy; seismic corrections; and enhancing research capability, which are all supported by the SCIP criteria. Specific SCIP approved projects are included in Chapter 7 of this volume, along with these projects are other below threshold and emergent need projects that may be added and funded during the execution of the program. Additionally, \$2.5 million is needed as VHA's prorated share of the Department of State's Capital Security Cost Sharing program for VHA's facilities in Manila.¹

¹ The Secure Embassy Construction and Counterterrorism Act of 1999, Section 1000(a) (7) of Public Law 106-113, was amended to include the Capital Security Cost Sharing (CSCS) program. Agencies with personnel overseas that occupy space controlled by the Department of State (DoS) shall provide funding in advance for their share of costs for new construction. DoS is implementing a 14 year, \$17.5 billion capital construction program to replace 150 Embassy and consulate compounds.

Page Intentionally Left Blank.

National Cemetery Administration Minor Construction Projects

I. Budget Authority

2012 Request.....	\$41,628,000
-------------------	--------------

II. Description/Justification of Program

NCA's 2012 minor construction request provides for gravesite expansion and columbaria projects to keep existing national cemeteries open. The minor request will also address infrastructure deficiencies and other requirements necessary to support National Cemetery operations, including repair projects identified in the Facility Condition Assessment report of the Millennium Act study on improvements to Veteran's cemeteries. Projects for irrigation improvements, renovation and repair of buildings, and roadway repairs and drainage improvements are critical to serving Veterans and ensuring that the cemeteries are maintained as national shrines. Projects will also address administrative and management functions that support cemetery operations.

In addition, these funds may be used for any of the 131 national cemeteries and 33 soldiers lots, plots, and monument sites under the jurisdiction of the National Cemetery Administration requiring emergency repairs because of floods, fires, hurricanes, tornadoes, earthquakes, strong winds, etc., where no other means of funding exist. Natural disasters or catastrophes are unforeseeable; however, repairs must be made to damaged facilities when they occur. Specific SCIP approved projects are included in Chapter 7 of this volume, along with these projects are other below threshold and emergent need projects that may be added and funded during the execution of the program.

Page Intentionally Left Blank.

Veterans Benefits Administration Minor Construction Projects

I. Budget Authority

2012 Request	\$23,645,000
--------------------	--------------

II. Description/Justification of Program

VBA's minor construction request in 2012 includes an ongoing national need for relocations, realignments, tenant improvements, repair and alteration projects totaling \$19.2 million. Additionally, \$4.4 million is needed as VBA's prorated share of the Department of State's Capital Security Cost Sharing program for VBA's regional office in Manila.¹ These projects are critical to ensuring continued world-class service delivery of benefits to Veterans and their families and to the well-being of our Federal employees. Specific SCIP approved projects are included in Chapter 7 of this volume, along with these projects are other below threshold and emergent need projects that may be added and funded during the execution of the program.

¹ The Secure Embassy Construction and Counterterrorism Act of 1999, Section 1000(a) (7) of Public Law 106-113, was amended to include the Capital Security Cost Sharing (CSCS) program. Agencies with personnel overseas that occupy space controlled by the Department of State (DoS) shall provide funding in advance for their share of costs for new construction. DoS is implementing a 14 year, \$17.5 billion capital construction program to replace 150 Embassy and consulate compounds.

General Administration/Staff Offices Minor Construction Projects

I. Budget Authority

2012 Request	\$22,950,000
--------------------	--------------

II. Description/Justification of Program

This program supports necessary additions, modifications and repairs to existing facilities that are estimated to cost \$10 million or less. Funds are used to make infrastructure repairs and enhancements to improve operations and provide an acceptable and operationally effective work environment for the Department's staff offices. Offices contained within the Central Office buildings and other VA-occupied non-patient care buildings are also included in this program. Specific SCIP approved projects are included in Chapter 7 of this volume, along with these projects are other below threshold and emergent need projects that may be added and funded during the execution of the program.

**Grants for Construction of
Veterans Cemeteries**

Appropriation Language

For grants to assist States and Tribal Governments in establishing, expanding, or improving veterans cemeteries as authorized by section 2408 of title 38, United States Code, \$46,000,000, to remain available until expended.

Appropriation Highlights (dollars in thousands)					
	2010 Actual	2011 Budget Estimate	2011 Current Estimate	2012 Request	Increase (+) Decrease (-)
Obligations.....	\$47,738	\$46,000	\$50,038	\$46,000	-\$4,038
Unobligated balances:					
Start of year (-)	-5,776	0	-4,038	0	+4,038
End of year	4,038	0	0	0	0
Budget authority (appropriation).....	\$46,000	\$46,000	\$46,000	\$46,000	\$0

Program Description

Grants are provided to states and tribal governments for the establishment, expansion, improvement or operation of state and tribal government Veterans cemeteries. The state and tribal government Veterans cemeteries complement the national cemeteries and are a critical part of National Cemetery Administration (NCA) strategy for meeting Integrated Objective 1: Make it easier for Veterans and their families to receive the right benefits, meeting their expectations for quality, timeliness and responsiveness. In 2010, nearly 28,000 Veterans and eligible family members were buried in state Veterans cemeteries that have been assisted by the program.

NCA data show that about 80 percent of persons interred in national cemeteries resided within 75 miles of the cemetery at time of death. Based upon this experience, NCA has determined that reasonable access to a burial option means that a first interment option (whether for casketed remains or cremated remains, either in-ground or in columbaria) in a Veterans cemetery is available within 75 miles of the Veteran's place of residence.

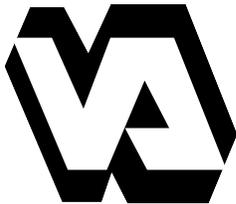

It is not feasible, however, for VA to build and operate national cemeteries in enough locations to provide every eligible Veteran with a burial option in a national cemetery within 75 miles of their residence. Increasing the availability of state and tribal government veterans cemeteries is a means to provide a burial option to those Veterans who may not have reasonable access to a national cemetery. States and tribal governments may locate these cemeteries in areas where there are no plans for NCA to operate and maintain a national cemetery.

Summary of Budget Request

The National Cemetery Administration requests \$46,000,000 to fund grants for Veterans cemeteries in 2012. Grants play a crucial role in achieving NCA's strategic target of providing 94 percent of Veterans with reasonable access to a burial option. Between 2012 and 2017, it is projected States and tribal governments will open 28 new Veterans cemeteries.

**Grants for Construction of State
Extended Care Facilities**

Budget Request\$85,000,000

Appropriation Language

For grants to assist States to acquire or construct State nursing home and domiciliary facilities and to remodel, modify or alter existing hospital, nursing home, and domiciliary facilities in State homes, for furnishing care to Veterans as authorized by sections 8131 through 8137 of title 38, United States Code, \$85,000,000, to remain available until expended.

1/ Reflects Annual Continuing Resolution Funding Level

2012 Funding

VA is requesting \$85 million for this program. The funding is \$15 million below the 2011 Annual Continuing Resolution level, but in-line with the 2011 President’s Budget.

2011 Continuing Resolution Funding

The current estimate for 2011 is based on the full year amount specified in the 2011 Continuing Resolution (CR), P.L. 111-322.

Recovery Act

The American Recovery and Reinvestment Act of 2009 (ARRA), Public Law 111-5 provided \$150 million for the Grants for State Extended Care Facilities program in February 2009. VA is required by law to obligate all of these funds by September 30, 2010, and VA has obligated all ARRA funds as required. These funds, which are part of the ARRA, have been used to accelerate activities that were originally planned for 2010 and 2011. These funds will be used to renovate and construct nursing homes, adult day care and domiciliary care facilities throughout the country. VA has obligated funds to 37 ARRA projects across the Nation.

Program Description

VA is requesting \$85 million in 2012 funding for construction of State home facilities, for furnishing domiciliary or nursing home care to Veterans, and to expand, remodel or alter existing buildings for furnishing domiciliary or nursing home care to Veterans in State homes. VA is required by section 8135 of Title 38 to prioritize state grant applications and its highest priority is to protect Veterans from those conditions that threaten the lives and safety of residents of an existing facility. The 2012 budget request ensures life-safety projects, matched with State funding, will not be compromised. Effective April, 2006, regulations were adopted by VA to give first priority to patient life-safety projects for up to 70% of the annual appropriation. The remainder of the annual appropriation will be used to support new construction projects and non-life safety renovation projects.

1/Reflects Annual Continuing Resolution Funding Level

Legislative History

This program was approved on August 19, 1964, and authorized on appropriation in 1965. At this time a grant may not exceed 65% of the total cost of the project. Public Law 95-62 dated July 5, 1977 authorized the VA to participate in the construction of new domiciliary as well as new nursing homes, and for sums appropriated to remain available until expended. Veterans' Health Care Act of 1984, Public Law 98-528 dated October 19, 1984 amended section 8132 to allow States to purchase facilities to be used as State nursing homes and domiciliary. Veterans' Benefits Improvement and Health Care Authorization Act of 1986, Public Law 99-576 dated October 28, 1986 amended section 8135 of title 38 to eliminate a limitation that prohibited any State from receiving in any fiscal year more than one-third of the amount appropriated in that fiscal year and required a priority list to be established on July 1 of each year. Veterans' Benefits and Services Act of 1988, Public Law 100-322 dated May 20, 1988 further amended section 8135 of title 38 to change the date for compiling a priority list of grantees from July 1 to August 15. Construction grants are to be made from that list for the fiscal year beginning October 1st. Public Law 100-322 also permitted VA to approve and award State home grants on a conditional basis and obligate funds for these awards. Public Law 100-322 permits VA to increase a conditionally approved grant amount if: (1) the estimated cost on which VA based the conditional approval increases; and (2) VA conditionally approved the grant before the State awarded a construction or acquisition contract for the project.

The final grant award increase would be limited to 10% of the original obligation. Veterans Health Care Act of 1992, Public Law 102-585 dated November 4, 1992 granted permanent authority for this program and extended from 90 days to 180 days, the period within which a State must complete the application for a State home grant after receiving a conditional award. Veterans' Health Care Eligibility Reform Act of 1996, Public Law 104-262 dated October 9, 1996 added Adult Day Health Care as another level of care that may be provided by State homes. Veteran's Millennium Health Care and Benefits Act of 1999, Public Law 106-117 dated November 30, 1999 provided greater specificity in directing VA to prescribe regulations for the number of beds for which grant assistance may be furnished. The following changes were enacted:

- VA is to establish criteria for determining the relative need for additional beds on the part of a State which already has such State home beds;
- Strengthens the requirements governing award of a grant;
- Revises provisions governing the relative priority of each application (among those projects for which States have made their funding available in advance);
- Differentiates among applications for new bed construction by reference to the relative need for such beds, by assigning a higher priority to renovation projects (with a total cost exceeding \$400,000), with highest priority to renovations involving patient life or safety and by assigning second highest priority to an application from a State that has not previously applied for award of a VA construction grant or a grant for a State nursing home; and
- Establishes a "transition" rule providing that current regulations and provisions governing applications for State home grants would continue in effect with respect to applications for a limited number of projects. Those "grandfathered" projects are limited to those projects on the list of approved projects, established by the Secretary on October 29, 1998, for which the State had made sufficient funds available and those priority one projects on VA's 2000 list, approved by the Secretary on November 3, 1999, submitted by States which had not received 1999 grant monies and are not included in the October 29th list. Note: All of the "grandfathered" projects received grants and are no longer included in the priority list.
- Effective April 2006, regulations were adopted by VA to give first priority to patient life-safety projects for up to 70% of the annual appropriation. The remainder of the annual appropriation will be used to support new construction projects.

VA Lease Notifications, Major Medical Facility Project & Lease Authorizations

Introductory Statement

The Department of Veterans Affairs requests an authorization of \$1,517,800,000 for major medical facility construction projects and \$41,264,000 for major medical facility leases in 2012. Authorization for these projects is needed prior to VA being able to make construction awards above what is currently authorized.

Title 38, U.S.C., sections 8104(a)(2) requires statutory authorization for all major medical facility construction projects and major medical facility leases (including parking facilities) prior to appropriation of funds. Public Law 105-368, section 704, amended 38 U.S.C., section 8104(a)(3)(B), currently defines a "major medical facility lease" as those where the annual rent exceeds \$1,000,000. Projects and leases for which authorization is being requested in 2012 are shown in the chart on Page 6-3.

Title 38, U.S.C., section 8104(b) requires VA to notify and submit a prospectus for all major medical facility construction projects and all major medical facility leases exceeding the \$1,000,000 threshold. The prospectuses for the major medical construction projects are reflected on pages 6-5 through 6-12. The prospectuses for projects requesting 2012 funds that also require additional authorization are found in Chapter 2 of this submission. This includes the projects at Palo Alto, CA; San Juan, PR; and Seattle, WA. The prospectuses for the VA direct leases that exceed \$1,000,000 are reflected beginning on page 6-13.

Public Law 111-117, Title II section 211, requires that the Secretary submit a written report (notification) to, and obtain approval within 30 days from, the Committee on Appropriations of Congress prior to the use of appropriated funds for any new lease of real property exceeding \$1,000,000.

VA considers a "new lease of real property" as one that pertains to real property that VA has never before leased, as well as succeeding or follow-up leases that have expired or will soon expire. Lease extensions, expansions, renewals, or other leases with pre-negotiated options are not considered new leases within the meaning of Public Law 111-117.

The Status Report for Authorized Major Medical Facility Projects and Leases (pages 6-41 through 6-46) is required under title 38 U.S.C.

All Department of Veterans Affairs facilities, including sites, are intended to be barrier free. Due to patient care requirements, at some locations VA accessibility standards exceed the General Services Administration (GSA) minimum requirements.

All projects comply with the requirements of the Coastal Barrier Resources Act (Public Law 97-348).

2011 Lease Notifications over \$1,000,000 (Non - Medical Facility Leases)

There is one new non-medical facility notification lease over \$1,000,000 for 2011. The new VBA lease in Los Angeles, CA, was included in the 2011 operating budget and is expected to award in 2011. If any additional leases are identified, notification will be made in accordance with the law.

2011 Major Non-Medical Lease Requiring Notification						
Year	VISN/AREA	Location	Project Title - Brief Description	Type	Est. Cost (\$000)	Estimated Annual Rental Cost (\$000)
2011	Western	Los Angeles, CA	GSA Lease (VBA)	New	\$4,000	\$4,000

2012 Major Medical Facility Project and Lease Authorization and Notification

Title 38, U.S.C., section 8104(a)(2), requires statutory authorization for all major medical facility construction projects and all major medical facility leases exceeding \$1,000,000 (including parking facilities) prior to appropriation of funds. VA is not required to request authorization for leases acquired through the General Services Administration (GSA). The table on the following page provides notice to the Congressional Committees on Authorization and Appropriations of the six major medical facility construction projects and seven major medical facility leases for which the Department is requesting authorization.

AUTHORIZATION AND NOTIFICATION REQUEST			
	Location	Description	Authorization Request (\$000)
2012 Major Medical Facility Projects Authorization Request			
1	Fayetteville, AR	Clinical Addition	90,600
2	Palo Alto, CA ¹	Centers for Ambulatory Care, Polytrauma, Blind Rehabilitation and Research	716,600
3	San Juan, PR ¹	Seismic Corrections Building 1	277,000
4	Seattle, WA ¹	Seismic Corrections Building 100	51,800
5	St. Louis (JB), MO ¹	Medical Facility Improvements & Cemetery Expansion	346,300
6	West Los Angeles, CA	Seismic Corrections: Seismic Retrofit 12 Buildings	35,500
		Total	\$ 1,517,800
2012 Leases Authorization Request and Notification			
1	Ft. Wayne, IN	Outpatient Clinic Lease	2,845
2	Mobile, AL	Outpatient Clinic Lease	6,565
3	Rochester, NY	Outpatient Clinic Lease	9,232
4	Salem, OR	Community Based Outpatient Clinic	2,549
5	San Jose, CA	Outpatient Clinic Lease	9,546
6	South Bend, IN	Outpatient Clinic Lease	4,038
7	Springfield, MO	Community Based Outpatient Clinic	6,489
		Total	\$41,264

¹ Prospectuses for these projects are found in Chapter 2 - Major Construction of this volume.

Notification of Intent to Obligate Over \$500,000 in Advance Planning Funds

As required by title 38, U.S.C., section 8104(f), VA may not obligate funds in an amount in excess of \$500,000 from the Advance Planning Fund of the Department toward design or development of a major medical facility project unless the Secretary submits to the Congressional Committees a report on the proposed obligation 30 days prior to obligation.¹ In accordance with this requirement the Department provides notification for the following three major medical facility projects:

Location	Title
Reno, NV	Correct Seismic Deficiencies and Expand Clinical Services: Bldg 1
Los Angeles, CA	Build New Essential Care Tower, Correct Seismic Deficiencies and Renovate Bldg 500
San Francisco, CA	Correct Seismic Deficiencies: Bldgs 1, 6, 8, and 12

¹Projects that receive authorization are not subject to this requirement.

Use of Bid Savings - Public Law 111-275 - Sec 905

Major medical construction bid savings of \$68,534,000, along with other available prior year unobligated balances in the major construction program, are being allocated to fund \$135,681,000 of the 2012 major construction program. Per Public Law 111-275, Section 905, bid savings from major medical projects can only be obligated on other major medical construction projects that were authorized the same fiscal year or in a prior fiscal year. The table below lists the projects that will transfer funds and the projects that will receive bid savings. Other available prior year unobligated funds that do not result from bid savings will also be made available within the major construction account to fund 2012 major construction requirements. No restriction exists for the use of these funds for other major construction purposes.

Bid Savings Source	Amount	Receiving Project
Las Vegas, NV - New Medical Center	\$4,613,000	New Orleans, - LA New Medical Ctr
Orlando, FL - New Medical Center	\$49,242,000	New Orleans, - LA New Medical Ctr
Fayetteville, AR - Clinical Addition	\$2,500,000	New Orleans, - LA New Medical Ctr
Gainesville, FL - Correct Patient Privacy Deficiencies	\$8,260,000	Denver, CO - New Medical Ctr
Lee County, FL - Outpatient Clinic	\$2,000,000	New Orleans, LA New Medical Ctr
Milwaukee, WI - Spinal Cord Injury	\$1,919,000	Denver, CO - New Medical Ctr
Other available prior year unobligated funds	\$67,147,000	Not Applicable
Totals	\$135,681,000	

**Fayetteville, Arkansas
Clinical Addition**

Project will build a new clinical addition with minor renovations at VAMC Fayetteville, Arkansas. This project will also construct a new parking garage. Authorization is requested to clarify the expanded scope of this project. No additional appropriation is required.

I. Budget Authority:

<u>Total Estimated Cost*</u>	<u>Available Through 2011</u>	<u>2012 Authorization Request</u>	<u>Future Request</u>
\$90,600,000	\$90,600,000	\$90,600,000	\$0

*\$93,000,000 was appropriated but \$2,400,000 was reprogrammed in September 2010, to fund the Filipino Equity Compensation Fund.

II. Priority Score: 2006- 0.2962

III. Description of Project: This project will construct a 164,158 sq ft clinical addition of which 151,158 sq. ft. is new construction and 13,000 sq. ft. of renovations on the VAMC Fayetteville, Arkansas campus. A parking garage will be constructed to meet parking shortages.

IV. Priorities/Deficiencies Addressed: This project will correct the projected workload volume deficiencies in specialty services of 168%, and eliminate the workload gap in ancillary services of 112%, thus ensuring Veterans will have access (according to VA’s mandate for access) to specialty care within 60 minutes drive time for urban areas and 90 minutes drive time for rural areas. Annual cost savings would be realized in reduced lease expenses for current off-site space. VAMC Fayetteville’s workload has increased by 114.6% in unique patients from 1998 – 2003. Per the space and functional survey, the total square feet at VAMC Fayetteville, Arkansas will accommodate approximately 25,600 unique Veterans. The 2004 projected number of unique Veterans is approximately 41,000.

V. Strategic Goals and Objectives:

Quality of Life: The additional specialty and ancillary services will maximize this medical center’s ability to provide care to facilitate the Veterans’ physical, mental & social functioning as well as improve the timely, accurate completion of Compensation & Pension (C&P) exams.

Ensure a smooth transition: The additional capacity in specialty and ancillary services will facilitate the new Veteran’s entry into the health care system and improve the medical center’s ability to assess this Veteran by providing timely access to specialty and ancillary care within standards.

Public Health, Emergency Management, Socio-economic well being: The increased ability to provide a broader range of specialty & ancillary services will improve the facility's ability to provide emergency services and support the community.

Enabling Goal: The facility has numerous memorandum of understanding with institutions of higher learning such as the Area Health Education Center (AHEC) to provide residents and students with clinical experience in specialty areas.

One VA: Decrease claims processing time for Compensation and Pension related actions by providing additional specialty and ancillary services instead of referring to the tertiary care facility.

VI. Alternatives to Construction Considered:

Alternative 1 - Status Quo: This alternative maintains the existing size and deficiencies of the existing clinic and does not account for the projected growth in specialty care and ancillary workload; therefore, this option is not preferred.

Alternative 2 - New Construction (preferred alternative): This option constructs a new outpatient facility to provide the necessary space to support the projected workload increases for specialty/diagnostic/ancillary clinical services in the Fayetteville area. Construction at existing site will eliminate duplicating services (pharmacy, laboratory and radiology) required if construction was off site. Veteran satisfaction will improve under this alternative due to greater continuity of care and a one-stop shopping approach for their healthcare and benefits. Based on the cost effectiveness of this alternative added to the intangible Veteran's benefits, this alternative is preferred.

Alternative 3 - Renovation: This option involves the renovation of existing space to accommodate the projected demand. However, the Fayetteville VAMC does not have ample space to renovate for this need. Therefore, this alternative is not preferred.

Alternative 4 - Leasing: This option leases a 164,158 square foot building in the Fayetteville area. However, due to the lease costs of clinic space compared to new construction costs, this alternative was the second most costly. Therefore, this option was least preferred.

Alternative 5 - Contract out: This option contracts for outpatient services currently provided at this VAMC. Due to the associated costs as well as the negative impact of patients having two sites of care, this option was least preferred.

VII. Affiliations/Sharing Agreements: The facility has many memoranda of understanding with institutions of higher learning such as the Area Health Education Center (AHEC) to provide residents, interns and students with clinical experience in specialty areas. AHEC family practice residents receive medical care education and training at this medical center.

VIII. Demographic Data*

	<u>2009</u>	<u>2019</u>	<u>2029</u>	<u>Change (2009-2029)</u>
Veteran Population	198,258	170,717	149,964	-24%
Enrollees	60,863	80,526	81,335	34%

*Data reflects the VISN 16 Eastern Southern market

IX. Workload

	<u>Current (2009)</u>	<u>Projected (2029)</u>	<u>Change (2009-2029)</u>
Ambulatory stops	368,747	469,992	27%
Mental Health stops	32,826	45,503	39%

X. Schedule:

Complete design development	August 2007
Award construction contract*	August 2012
Complete construction	February 2014

* For the parking garage

XI. Project Cost Summary

New construction.....127,000 gross square feet	\$37,072,000
Alterations.....15,000 gross square feet	2,726,000
Subtotal	\$39,798,000
Other costs:	
Pre-design development allowance	\$956,000
Total other costs(Utilities, etc)	\$32,288,000
Total estimated base construction cost	\$73,042,000
Construction contingency	\$5,663,000
Technical services	\$5,482,000
Impact costs	\$3,985,000
Construction management firm costs	\$1,833,000
Utilities Agreements	\$0
Total estimated base cost	\$90,005,000
Inflation allowance to construction award	\$595,000
Total estimated project cost*	\$90,600,000

*\$93,000,000 was appropriated but \$2,400,000 was reprogrammed to fund the Filipino Equity Compensation Fund.

West Los Angeles, California
Seismic Corrections: Seismic Retrofit 12 Buildings*

**This project was originally submitted for the retrofit of 11 buildings. However, Building 209 was added to the scope of the project in support of homeless housing.*

This project will seismically retrofit and renovate 12 Buildings, totaling over 660,000 square feet at the VA West Los Angeles Healthcare Center. Authorization is requested in 2012 to complete the renovation of Building 209 to house homeless programs. Additional resources in the amount of \$20 million will be made available from prior year unobligated major construction funds.

I. Budget Authority

<u>Total Estimated</u> <u>Cost*</u>	<u>Available Through</u> <u>2011</u>	<u>2012 Authorization</u> <u>Request</u>	<u>Future Request</u>
\$346,900,000	\$15,500,000	\$35,500,000	\$311,400,000

* Total estimated cost may be revised based on completed design of the project.

II. Priority Score: 2009- 0.4602

III. Description of Project

This project will seismically retrofit the structural and non-structural systems for Buildings 114, 115, 205, 206, 207, 208, 209, 212, 222, 257, 258 and 300. In addition, life-safety and Facility Condition Assessment (FCA) corrections shall be included in the scope for certain buildings.

This project encompasses the required seismic retrofit of 12 buildings located on the campuses of the West Los Angeles. Based on the latest Degenkolb Seismic Safety Report, these buildings are designated as Exceptionally High Risk and are at risk of substantial damage and/or possible collapse in the occurrence of a seismic event.

This project will elevate these 12 buildings to the required standards, reducing the risk of building collapse and potential loss of life in the event of a major seismic occurrence. The buildings associated with this project encompass the relocation and consolidation of numerous departments and will involve extensive phasing and a multitude of space and functional changes for research and mental health programs within the 12 buildings. This proposed project will make progress toward resolving seismic safety issues and possible space gaps in a safe setting and meet Joint Commission on Accreditation of Healthcare Organizations (JCAHO) standards.

IV. Priorities/Deficiencies Addressed

These proposed 12 buildings provide numerous functions, including domiciliary, psychiatry, vocational rehabilitation and research programs for the entire Greater Los Angeles Healthcare System. This project would also include a broad spectrum of homeless services.

Given the amount of structural seismic and non-structural seismic deficiencies, the buildings would be greatly damaged by a significant seismic event. Patient care would be disrupted anywhere from a number of months to several years.

V. Strategic Goals and Objectives

Public Health & Socioeconomic: Any substantial seismic-caused damage would disrupt all affiliations and medical training programs in the 12 buildings. There are over 100 teaching staff and 400 residents/students on the WLA campus. Patients would be affected socially and economically if these buildings are damaged because they would have to seek treatment elsewhere. Locating alternative treatment sites, however, would be problematic in the local community hospitals because of their high occupancy rates.

Quality of Life: As a result of seismic damage, coordinated care in these buildings or in the WLA Campus would be greatly compromised. Patients would have to seek care elsewhere.

VI. Alternatives to Construction Considered

Alternative 1 - Status Quo: This alternative leaves these buildings seismically deficient, compromising patient care in the event of an earthquake. Due to this liability, this alternative is not preferred.

Alternative 2 - Seismically Upgrade Buildings (Preferred alternative): This option involves the seismic correction of 12 buildings as well as FCA corrections to most of them to provide a safe environment for Veterans. This option is the most cost effective and is the most beneficial to Veterans; therefore, it is the preferred alternative.

Alternative 3 - New Construction: This alternative constructs new buildings instead of renovating them. While this provides the same advantages of alternative 2, it is more costly; therefore, it is the next preferred alternative.

Alternative 4 - Lease: This option leases space for the functions existing in these 12 buildings. In this area, there is no existing medical and research space of this size available for lease. Also, there is no site available in this area where a commercial developer could build large facilities. Based on this lack of availability as well as costs associated with a lease for these functions, this alternative is not preferred.

Alternative 5 – Contract Out: This alternative contracts all the functions in the existing buildings to the community. Neighboring medical facilities do not have the capacity to cover the workload being performed in these 12 buildings. Based on this, this alternative is not preferred.

VII. Affiliations/Sharing Agreements

UCLA presently has over 100 teaching physicians and 400 residents/students at the West Los Angeles Campus.

VIII. Demographic Data*

	<u>2009</u>	<u>2019</u>	<u>2029</u>	<u>Change</u> <u>(2009-2029)</u>

^{2/} Recurring: resources (including staff) necessary to support services to be provided from the space being built or remodeled on an annual basis.

**Fort Wayne, Indiana
Outpatient Clinic Lease**

This proposal provides for leasing a new Outpatient Clinic in close proximity to the City of Fort Wayne, IN, supporting the parent facility of the VA Northern Indiana Health Care System in Fort Wayne, IN.

I. Budget Authority

<u>Lease Through</u>	<u>2012 Request</u>	<u>2012 Authorization</u>	<u>Unserviced Annual</u>
2034		Request	Rent
	\$2,844,720	\$2,844,720	\$1,359,720

II. Description of Project

This project will relocate mental health services from the current Fort Wayne VA Medical Center (VAMC) to a new, leased facility in close proximity to the City of Fort Wayne, IN. The new facility will expand mental health service space and will accommodate limited support services in approximately 27,000 net usable square feet (NUSF) to meet increased Veteran demand and to decompress the Fort Wayne VAMC. This project will allow VA to continue to provide timely access to state-of-the-art mental health care, including care for substance abuse and post-traumatic stress disorder (PTSD) in an adequately-sized facility to meet this increased workload.

Approval of this prospectus will constitute authority for up to 20 years of leasing including the initial term, and any renewal options, as necessary, prior to the completion of the proposed lease.

III. Priorities/Deficiencies Addressed

This project addresses two critical issues that will enhance Veteran healthcare services in the Fort Wayne area. First, the new lease will improve the quality of care delivery by providing a state-of-the-art building for mental health services, including substance abuse and PTSD care. Second, the new facility will allow the Fort Wayne VAMC to decompress by moving mental health services and limited support services to an alternate location.

IV. Alternatives to Lease Considered

Alternative 1 - Status Quo: The Status Quo continues to maintain and provide mental health services and all support functions at the Fort Wayne VAMC, with its aging infrastructure and obsolete, 60-year-old healthcare buildings. This option fails to address existing space shortages, infrastructure deficiencies, and patient privacy and satisfaction issues. Therefore, this option is not the most optimal.

Alternative 2 - New Lease (Preferred alternative): This alternative proposes to lease a new, 27,000 NUSF facility in close proximity to the City of Fort Wayne, IN. The lease

alternative was selected because it will allow VA to expand mental health services, including substance abuse and PTSD care, to accommodate increased workload. This alternative will enable VA to provide high-quality patient care in the most cost-effective manner, without requiring significant up-front capital investment. This alternative also provides expanded state-of-the-art clinical space sooner than the new construction alternative, and provides an option that will give VA the flexibility to respond to the changing healthcare needs of Veterans and their families.

Alternative 3 – Contract Out Services: This alternative assumes that all mental health services would be contracted out in the community. This alternative is not cost-effective and would result in a loss of quality control over Veteran healthcare. There also may not be sufficient, qualified, private-sector providers in the Fort Wayne area to accommodate the Veteran workload. Therefore, this alternative is the least preferred.

Alternative 4 – New Construction: This alternative would consist of the new construction of a 27,000 NUSF facility on the Fort Wayne VAMC campus to provide clinical space for mental health and limited support services. Flexibility to expand services or change location to address changes in workload demand would be difficult in this alternative. Therefore, this alternative is the second preferred.

V. Demographic Data*

	<u>2009</u>	<u>2019</u>	<u>2029</u>	<u>Change</u> <u>2009-2029</u>
Veteran Population	145,531	115,875	91,677	-37%
Enrollees	48,014	54,264	49,740	4%

*Indiana market, Sectors 11-b-9-B, 11-b-9-C, and 11-b-9-D.

VI. Workload

	<u>Current</u> <u>(2009)</u>	<u>Projected</u> <u>(2029)</u>	<u>Change</u> <u>2009-2029</u>
Ambulatory Stops	208,804	268,994	29%
Mental Health Stops	15,135	20,655	36%

VII. Schedule

Award leases	January 2013
Complete construction	January 2015
Activation/Occupancy	March 2015

VII. Project Cost Summary

Estimated Annual Cost	\$1,359,720
Proposed Rental Rate*	\$50.36/SF
Proposed Lease Authority	20 Years
Net Usable Square Feet	27,000
Parking Spaces	216
Special Purpose Related Improvements**	\$1,485,000

*Estimate based on 2011 rates, and may be escalated by 4% annually to the effective date of the lease to account for inflation.

**Represents lump sum payment to Lessor to design and build out space for clinical use; not included in base rent.

Page Intentionally Left Blank

Mobile, Alabama Outpatient Clinic Lease

This proposal provides for a Replacement Lease for the Mobile Community Based Outpatient Clinic, Mobile, AL, supporting the parent facility of the VA Gulf Coast Veterans Health Care System, Biloxi, MS.

I. Budget Authority

Lease Through	2012 Request	2012 Authorization Request	Unserviced Annual Rent
2034	\$6,564,528	\$6,564,528	\$2,984,028

II. Description of Project

This project proposes the lease of 65,125 Net Usable Square Feet (NUSF) for a replacement Community Based Outpatient Clinic in Mobile, AL, to replace the existing 35,345 NUSF clinic. The lease will provide for administrative and clinical space consistent with VA CBOC requirements. Space will be allocated to the following general areas: Audiology and Speech Pathology, CCHT, canteen, clinic administration, education, environmental management, eye clinic, HBPC, lab, medical administration, medical specialty clinics, mental health, nursing, patient advocacy, pharmacy, police, primary care, radiology, surgical specialty clinics, Veterans' service organizations, warehouse, and women's health.

Approval of this prospectus will constitute authority for up to 20 years of leasing, as well as potential extension of the present lease as may be necessary pending execution of the replacement lease.

III. Priorities/Deficiencies Addressed

This lease addresses functional, utilization and safety deficiencies. The existing clinic is housed in a functionally obsolete clinical building owned by the University of South Alabama. VA occupies 35,345 net usable square feet on the first and sixth floors of a 1940's era hospital, which has been sublet to various health-oriented businesses since the 1980's. Due to deteriorating conditions, rising crime rates, and the building's operational inefficiencies, many of the businesses have strategically relocated to other parts of the city. As a result, VA remains as one of the few tenants in an otherwise empty building. The Primary Care Clinic is run out of a 1970's era surgery suite and the Mental Health Clinic is housed on a separate floor, in an old inpatient ward. Hallways are narrow and turning radius for wheelchairs is limited. The main reception area is too small for the number of patients; the sub-waiting areas often overflow into the narrow corridors. Other services, such as Audiology and Radiology, also have small waiting rooms. The rest of the clinic is housed on a different floor; it is overcrowded and many new programs can't be implemented due to lack of square footage. Because of columns and bearing walls, the existing space does not work even in a renovated configuration.

As indicated by staff and Veteran complaints, the current environment is challenging, both logistically and aesthetically. Even before the patient enters the clinic, there are barriers to overcome. For example, the main entrance/reception area is co-located on the side of the building originally designed as an ambulance entrance. In fact, VA still uses the entrance for ambulance pick-ups. Although Veterans may be dropped off at this entrance, there is no parking available for family or other escorts.

IV. Alternatives to Lease Considered

Alternative 1 – Status Quo: Maintain the existing lease. The clinic will continue to be housed in a functionally obsolete clinical building on the first and sixth floors of a 1940’s era hospital. Space, safety and functional deficiencies will remain. Due to these constraints, this option is not preferred.

Alternative 2 – New Lease (Preferred alternative): This option proposes to lease 65,125 net usable square feet (NUSF) for the Mobile Clinic and would provide greater capacity for medical staff to perform in a more appropriately sized, modern facility. The new lease would incorporate all current services and include the addition of new services, such as Home Based Primary Care (HBPC) and the Patient Aligned Care Team (PACT) Model. The Clinic will need more operational and support space to improve staff and patient flow. Based on cost and the positive patient impact, this alternative is the preferred one.

Alternative 3 – Contract Out: This alternative would contract out all services currently provided by the CBOC to private health care providers in the community. This alternative would result in increased annual costs, which would be challenging to financially support. Also, this alternative would face challenges associated with limited existing capacity in the community to absorb VA’s workload. Therefore, this option is the least preferred.

Alternative 4 – New Construction: New construction will address all functional, utilization and safety gap concerns, and agency strategic goals. However, there is a need to reside closer to the Veteran community when demographics change. This makes a permanent site less favorable. In addition, new construction would require land acquisition; this not only increases the cost but would delay activation by at least one year. Therefore, this alternative is the next preferred.

V. Demographic Data*:

	<u>2009</u>	<u>2019</u>	<u>2029</u>	<u>Change (2009-2029)</u>
Veteran Population	35,177	27,628	22,519	-36%
Enrollees	11,957	13,121	12,486	4%

*Data reflects the VISN 16 Central Southern market

VI. Workload

	Current (2009)	Projected (2029)	Change (2009-2029)
Ambulatory Care Stops	66,894	112,975	69%
Mental Health Stops	18,996	36,986	95%

VII. Schedule

Award leases	January 2013
Complete construction	January 2015
Activation/Occupancy	March 2015

VIII. Project Cost Summary

Estimated Annual Cost	\$2,984,028
Proposed Rental Rate*	\$45.82/SF
Proposed Lease Authority	20 Years
Net Usable Square Feet	65,125
Parking Spaces	521
Special Purpose Related Improvements**	\$3,580,500

*Estimate based on 2011 rates, and may be escalated by 4% annually to the effective date of the lease to account for inflation.

**Represents lump sum payment to Lessor to design and build out space for clinical use; not included in base rent.

Page Intentionally Left Blank.

**Rochester, New York
Outpatient Clinic Lease**

This proposal provides for a replacement leased Community Based Outpatient Clinic in Rochester, Monroe County, NY, supporting the parent facility of the Canandaigua VA Medical Center in Canandaigua, NY.

I. Budget Authority

Lease Through	2012 Request	2012 Authorization Request	Unserviced Annual Rent
2034	\$9,231,600	\$9,231,600	\$4,611,600

II. Description of Project

This project proposes to lease a replacement, 84,000 net usable square feet (NUSF) Community Based Outpatient Clinic (CBOC), including 672 parking spaces. This leased facility will provide expanded outpatient services to address utilization and space gaps in the Monroe County sub-market area within the Finger Lakes/Southern Tier Market. The current leased Rochester CBOC is 49,190 gross square feet (GSF) and includes 184 parking spaces. Two additional leased sites nearby, at Mt. Hope Avenue (6,364 GSF) and Clinton Crossings (8,091 GSF), are used to offset the space and parking shortages at the CBOC. The current lease is set to expire in October 2016, and the building owner has indicated the lease cannot be renewed.

The replacement Rochester lease will include primary care, women's health, Operation Enduring Freedom / Operation Iraqi Freedom (OEF/OIF), mental health, homeless outreach, home-based primary care (HBPC), specialty services, ancillary services, compensation and pension (C&P), research, residency programs with local affiliates, Veterans Benefits Administration (VBA), Veteran Service Organizations (VSO), and volunteer programs.

Approval of this prospectus will constitute authority for up to 20 years of leasing, as well as potential extension of the present lease as may be necessary pending execution of the replacement lease.

III. Priorities/Deficiencies Addressed

This lease addresses the continuing need to provide primary care, mental health, and specialty care services to Veterans residing in Rochester, NY.

Several programs currently provided at the Rochester CBOC were shown to have both workload and space gaps by the Strategic Capital Investment Plan (SCIP). These services include: ambulatory primary care, geriatrics, and urgent care; medical and other non-surgical specialties; mental health programs; surgical specialties; dental clinic; laboratory and pathology; and radiology and nuclear medicine. These gaps will be addressed in the proposed CBOC replacement facility.

IV. Alternatives to Lease Considered

Alternative 1 – Status Quo: The status quo would continue to provide outpatient services in Rochester, Monroe County, NY, in the current, 49,190 GSF leased building until the lease termination date in 2016. After lease termination, this primary care access point would be eliminated, significantly decreasing access to care for Veterans. This alternative would require Veterans in Monroe County to travel to alternative VA facilities to receive primary care, mental health, and specialty care services. Therefore, this option is not the most optimal.

Alternative 2 – New Lease (Preferred alternative): This project proposes to replace the existing lease with a replacement, 84,000 NUSF CBOC to include 332 parking spaces. This replacement lease will allow VA to continue to provide services in Monroe County, and will allow for the required expansion of services to meet current utilization and space gaps at the current CBOC. This alternative was selected because the lease would enable VA to serve a greater number of Veterans, reduce Veteran travel time for some clinical services, and consolidate the three leases into a single location. Furthermore, the lease alternative will provide expanded, state-of-the-art clinical space sooner than the new construction alternative and will provide a more functional and effective healthcare environment to the benefit of Veterans, Veterans’ families and medical staff.

Alternative 3 – Contract Out Services: This alternative would seek to contract out all ambulatory, mental health, and specialty care services in the community. This alternative is not cost-effective and would result in a loss of quality control over Veteran healthcare. There also may not be sufficient, qualified, private-sector providers in the Monroe County area to accommodate the Veteran workload. Therefore, this alternative is the least preferred.

Alternative 4 – New Construction: This alternative would require VA to purchase a land parcel and construct a new, 84,000 NUSF facility in Monroe County. This alternative solves utilization and space gaps in the same manner as the lease alternative. However, a permanent site limits the ability to relocate services in the future to adapt to changes in Veteran demographics. In addition, new construction would require land acquisition; this not only increases the cost but would delay activation by approximately one year. Therefore, this alternative is the second preferred.

V. Demographic Data*

	<u>2009</u>	<u>2019</u>	<u>2029</u>	<u>Change</u> <u>(2009-2029)</u>
Veteran Population	49,357	33,821	23,579	-52%
Enrollees	16,966	16,244	13,613	-20%

*Data reflects the VISN 2, Monroe County, NY market

VI. Workload

	Current (2009)	Projected (2029)	Change (2009-2029)
Ambulatory Stops	66,653	73,116	10%
Mental Health stops	24,231	27,392	13%

VII. Schedule

Award leases	January 2013
Complete construction	January 2015
Activation/Occupancy	March 2015

VIII. Project Cost Summary

Estimated Annual Cost	\$4,611,600
Proposed Rental Rate*	\$54.90/SF
Proposed Lease Authority	20 Years
Net Usable Square Feet	84,000
Parking Spaces	672
Special Purpose Related Improvements**	\$4,620,000

*Estimate based on 2011 rates, and may be escalated by 4% annually to the effective date of the lease to account for inflation.

**Represents lump sum payment to Lessor to design and build out space for clinical use; not included in base rent.

Page Intentionally Left Blank

**Salem, Oregon
Community Based Outpatient Clinic**

This proposal provides for a replacement and expansion of the Community Based Outpatient Clinic in Salem, OR, supporting the parent facility of Portland, OR.

I. Budget Authority

Lease Through	2012 Request	2012 Authorization Request	Unserviced Annual Rent
2034	\$2,549,320	\$2,549,320	\$1,119,320

II. Description of Project

This project proposes the lease of 26,000 NUSF of commercial space within the city limits of Salem, OR, for a Community Based Outpatient Clinic, with approximately 104 parking spaces. At 10,000 NUSF, the existing clinic is too small to support the projected workload growth. The new CBOC will continue to provide primary and specialty care, mental health and ancillary services. The new clinic will also provide special services of Eye Care, Rehabilitation, and Audiology and Speech Pathology.

Approval of this prospectus will constitute authority for up to 20 years of leasing, as well as potential extension of the present lease as may be necessary pending execution of the replacement lease.

III. Priorities/Deficiencies Addressed

This lease addresses severe space constraints in the present Salem CBOC, which occupies less than 10,000 NUSF. The replacement lease is sized to accommodate growth through peak forecast demand for offered services. It also moves, for the first time, high-demand VA Specialty Care services closer to Veterans living in the Salem area. Patients utilizing those services must currently travel an hour or more to Portland VAMC's main campus.

The new CBOC will increase clinical capacity for primary and specialty care, mental health and ancillary services, improving patient satisfaction through expanded services, shorter wait times and more timely appointments, and allow for space configurations consistent with patient-centered care principles. Expanding the existing CBOC footprint by approximately 16,000 NUSF will address the utilization gap in the South Cascades market by approximately 28,000 outpatient visits in primary care, mental health, specialty care, and ancillary services.

Finally, the relocated and expanded CBOC will improve efficiency and lower operating costs. The functional relationships in the new space will provide a more efficient layout of departments and rooms. The new building envelope will be more energy efficient than the existing CBOC.

IV. Alternatives to Lease Considered

Alternative 1 - Status Quo: The status quo would continue to lease 10,000 NUSF at the existing Salem CBOC. Due to a significant utilization gap of Primary Care and Mental Health over the next 20 years in the VISN 20 South Cascades market, as well as the increased demand for Specialty Care, remaining at status quo for this CBOC will not meet the healthcare needs of the Veterans, resulting in increased wait times as well as a decrease in patient satisfaction. Therefore, this option is not optimal.

Alternative 2 - New Lease (Preferred alternative): This project proposes a lease of approximately 26,000 NUSF to expand and relocate the Salem, OR, CBOC. Relocating to an area of higher Veteran population brings the clinic closer to Veterans and reduces the access gap for Specialty Care services. This new lease will provide additional space for the expansion of services that will reduce the existing and projected Salem space gaps in Primary Care and Mental Health. Finally, adding services such as Eye Care, Audiology and Speech Pathology, and Physical Therapy and Rehabilitation will improve VA market penetration and permit patients to receive these services without having to drive 1-3 hours to Portland. Based on these issues, this is the preferred alternative.

Alternative 3 - Contract Out Services: This alternative would seek to contract out all services currently offered at the Salem CBOC, as well as the projected workload increase, to private health care providers. Challenges for this option include maintaining quality of care across numerous contracts and providers and finding sufficient health care capacity in the community to absorb current and projected VA workload. Health care demand in the area has already stressed capacity of private sector resources. Therefore, this alternative is the least preferred.

Alternative 4 - New Construction: This alternative proposes to acquire land and construct an outpatient clinic in the Salem area. This alternative shares many of the benefits of the preferred lease alternative. However, this alternative will have a longer implementation timeline than the preferred lease option and reduce the flexibility of relocating when demographics shift. Therefore, this alternative is the second preferred.

V. Demographic Data*

	<u>2009</u>	<u>2019</u>	<u>2029</u>	Change (<u>2009-2029</u>)
Veteran Population	381,691	318,805	263,828	-31%
Enrollees	127,058	153,188	150,119	18%

*Data reflects the VISN 20 South Cascades Market

VI. Workload

	Current (2009)	Projected (2029)	Change (2009-2029)
Ambulatory stops	10,865	16,905	56%
Mental Health stops	3,646	5,949	63%

VII. Schedule

Award leases	January 2013
Complete construction	June 2014
Activation/Occupancy	September 2014

VIII. Project Cost Summary

Estimated Annual Cost	\$1,119,320
Proposed Rental Rate*	\$45.82/SF
Proposed Lease Authority	20 Years
Net Usable Square Feet	26,000
Parking Spaces	104
Special Purpose Related Improvements**	\$1,430,000

*Estimate based on 2011 rates, and may be escalated by 4% annually to the effective date of the lease to account for inflation.

**Represents lump sum payment to Lessor to design and build out space for clinical use; not included in base rent.

Page Intentionally Left Blank.

**San Jose, California
Outpatient Clinic Lease**

This proposal provides for leasing a replacement Community Based Outpatient Clinic in San Jose, CA, supporting the parent facility of the VA Palo Alto Health Care System in Palo Alto, CA.

I. Budget Authority

Lease Through	2012 Request	2012 Authorization Request	Unserviced Annual Rent
2034	\$9,545,760	\$9,545,760	\$5,585,760

II. Description of Project

This project will replace the existing 72,000 net usable square foot (NUSF) San Jose Community Based Outpatient Clinic (CBOC) in San Jose, CA. The existing 72,000 NUSF San Jose CBOC lease is set to expire in 2016 with no additional option years remaining on the existing lease and no opportunity to renew. The replacement lease will be for up to 72,000 NUSF and include at least 576 parking spaces. The San Jose CBOC will provide primary care, mental health and specialty care, to include audiology, podiatry and optometry. The clinic will also provide ancillary and diagnostic services, to include general x-ray, laboratory, pharmacy and telehealth.

Approval of this prospectus will constitute authority for up to 20 years of leasing, as well as potential extension of the present lease as may be necessary pending execution of the replacement lease.

III. Priorities/Deficiencies Addressed

This lease addresses the need to provide ongoing primary care, mental health and specialty care services to Veterans residing in San Jose, CA. The San Jose CBOC is a busy, multi-specialty clinic that treats over 10,000 Veterans annually. The San Jose CBOC is located in Santa Clara County where over 75,000 Veterans currently reside. Maintaining a presence in the San Jose region is critical to ensuring access to health care services for these Veterans, improving the likelihood that Veterans will seek care and comply with clinical treatment plans. A new 20-year lease is required since VA will have to vacate the existing facility no later than November 2016.

Replacing the San Jose CBOC with a new facility in the San Jose region will enable VAPAHCS to provide a state-of-the-art treatment facility using integrated design concepts. The new facility will be designed around the principles of Veteran- and family-centric care; providing space for interdisciplinary team delivery; integration of the family into the treatment plan; and creating space to optimize health and wellness. Continuing service in this region also embodies the goal of being patient-centric by

delivering care in a community setting where a substantial number of Veterans live, thereby reducing wait and drive times and eliminating service disparities.

IV. Alternatives to Lease Considered

Alternative 1 - Status Quo: The status quo would continue to provide outpatient services in the existing San Jose CBOC clinic until the current lease expires in 2016. The primary care access point in southern Santa Clara County would be eliminated, significantly decreasing access to care for Veterans. This alternative would require that Veterans residing in Santa Clara County, specifically in the City of San Jose, travel through densely congested traffic corridors to receive basic services in either Palo Alto or Monterey. In addition, this alternative does not provide any opportunity to decompress the Palo Alto Division. As it is the goal of VAPAHCS to improve access to services for Veterans, this option is not the most optimal.

Alternative 2 - New Lease (Preferred alternative): This project proposes to replace the 72,000 NUSF CBOC in San Jose, CA with a new, leased facility after the expiration of the existing lease in 2016. The replacement lease will be for up to 72,000 NUSF and include a minimum of 360 parking spaces. Through the competitive procurement process, this alternative will allow VAPAHCS to identify the best value land parcel and facility for the new clinic. The clinic will be designed to provide state-of-the-art services and incorporate the latest VA clinical delivery models, to include Patient Aligned Care Team practices. Therefore, leasing a facility in the San Jose area to ensure the continued provision of medical services is the preferred alternative.

Alternative 3 - Contract Out Services: This alternative would seek to contract out all ambulatory, mental health and specialty care in the community. As a national health care system, VA has gained a unique level of expertise in providing Veterans services, including the maintenance of a comprehensive medical record, expertise in mental health issues and provision of wellness outreach and education that would be extremely difficult to replicate in a community setting. Relying on a community or contract provider that potentially lacks expertise in Veteran issues to provide treatment to this potentially vulnerable and at-risk patient population poses a risk to Veteran safety. In addition, relying on contract providers to offer these services remains cost prohibitive and is subject to the availability of mental health providers within the community. Therefore, this alternative is the least preferred.

Alternative 4 - New Construction: This alternative would require VAPAHCS to acquire a land parcel and construct a new, 72,000 NUSF facility. A permanent site limits the ability to relocate services in the future to adapt to changes in Veteran demographics and is therefore less favorable. In addition, new construction would require land acquisition; this not only increases the cost, but would delay activation by approximately one year. Therefore, this alternative is the second preferred.

V. Demographic Data*

	2009	2019	2029	Change (2009-2029)
Veteran Population	225,428	167,749	129,722	-42%
Enrollees	71,246	72,179	65,915	-7%

*Data reflects the VISN 21 South Coast Market and 55% of Alameda County. Note: Alameda County is a shared county that is serviced by both VAPAHCS and VANCHCS. All of the workload for this county is included in the North Coast Market.

VI. Workload

	Current (2009)	Projected (2029)	Change (2009-2029)
Ambulatory stops	32,331	37,105	15%
Mental Health stops	19,111	24,517	28%

VII. Schedule

Award leases	January 2013
Complete construction	January 2015
Activation/Occupancy	March 2015

VIII. Project Cost Summary

Estimated Annual Cost	\$5,585,760
Proposed Rental Rate*	\$77.58/SF
Proposed Lease Authority	20 Years
Net Usable Square Feet	72,000
Parking Spaces	576
Special Purpose Related Improvements**	\$3,960,000

*Estimate based on 2011 rates, and may be escalated by 4% annually to the effective date of the lease to account for inflation.

**Represents lump sum payment to Lessor to design and build out space for clinical use; not included in base rent.

Page Intentionally Left Blank

South Bend, Indiana Outpatient Clinic Lease

This proposal provides for leasing a replacement Outpatient Clinic in South Bend, IN, supporting the parent facility of the VA Northern Indiana Health Care System in Fort Wayne, IN.

I. Budget Authority

Lease Through 2034	2012 Request \$4,038,450	2012 Authorization Request \$4,038,450	Unserviced Annual Rent \$1,893,450

II. Description of Project

This project proposes the lease of an approximately 39,000 net usable square foot (NUSF) Outpatient Clinic facility in South Bend, Indiana. The new leased facility will replace the existing Community Based Outpatient Clinic (CBOC) in South Bend, and will enable VA to expand services provided to include outpatient primary care and mental health services to better serve the needs of Veterans and their families.

Approval of this prospectus will constitute authority for up to 20 years of leasing, as well as potential extension of the present lease as may be necessary pending execution of the replacement lease.

III. Priorities/Deficiencies Addressed

This lease addresses two critical issues that will enhance Veteran health care services in the South Bend area. First, the proposed facility will improve the quality of care delivered to Veterans by integrating outpatient care delivery, including primary care and mental health services, into a state-of-the-art building with improved adjacencies. Outpatient services currently contracted out to providers in the South Bend area will be provided at the new facility, allowing VA to have greater control over Veteran healthcare.

Second, the new facility will provide more accessible health care services to Veterans. The leased location will enable VA to expand its service offerings and improve access for Veterans who previously had to travel to other facilities, at a greater distance than the targeted 30-minute drive time, to obtain these outpatient services.

IV. Alternatives to Lease Considered

Alternative 1 – Status Quo: Under the Status Quo, VA would continue to provide limited outpatient services in the South Bend area through contracting out services and an arrangement to house four VA mental health providers at the contracted facility, resulting in decreased continuity of care and costly outsourcing expenses. In addition, the time Veterans spend traveling to the Fort Wayne VA Medical Center (VAMC) for care that is not provided locally suggests the status quo is not acceptable to meet customer satisfaction. Therefore, this alternative is not the most optimal.

Alternative 2 – New Lease (Preferred alternative): This alternative proposes leasing a 39,000 NUSF facility close to the Veteran population that the South Bend CBOC currently serves, and expanding the services currently provided. By pursuing the lease option, VA will provide infrastructure that supports increased integration of services, coordination of care, provider productivity and efficiency, patient satisfaction, compliance with clinical guidelines, access, safety and security. This alternative also provides expanded state-of-the-art clinical space sooner than the new construction alternative, and provides an option that will give VA more flexibility to respond to the changing healthcare needs of Veterans and their families.

Alternative 3 - Contract Out Services: This alternative assumes that all health care services would be contracted out in the community. This alternative is not cost-effective and would result in a loss of quality control over Veteran healthcare. There also may not be sufficient, qualified, private-sector providers in the South Bend area to accommodate the Veteran workload. Therefore, this alternative is the least preferred.

Alternative 4 – New Construction: This alternative assumes the construction of a new, outpatient primary care and mental health facility of approximately 39,000 NUSF. It would provide infrastructure that supports the increased integration of services, coordination of care, provider productivity and efficiency, patient satisfaction, compliance with clinical guidelines, access, safety and security. Flexibility to expand services or change location to better align with workload demand would be difficult in this alternative. In addition, this alternative would require VA to acquire land in the South Bend area for the facility; this not only increases the cost but would delay activation. Therefore, this alternative is the second preferred.

V. Demographic Data*

	<u>2009</u>	<u>2019</u>	<u>2029</u>	<u>Change</u> <u>2009-2029</u>
Veteran Population	72,766	57,938	45,839	-37%
Enrollees	24,007	27,132	24,870	4%

*Data reflects the VISN 11 Indiana Market

VI. Workload

	<u>Current</u> <u>(2009)</u>	<u>Projected</u> <u>(2029)</u>	<u>Change</u> <u>(2009-2029)</u>
Ambulatory Stops	15,836	20,821	317%
Mental Health Stops	3,150	5,133	63%

VI. Schedule

Complete construction	January 2015
Activation/Occupancy	March 2015

VII. Project Cost Summary

Estimated Annual Cost	\$1,893,450
Proposed Rental Rate*	\$48.55/SF
Proposed Lease Authority	20 Years
Net Usable Square Feet	39,000
Parking Spaces	312
Special Purpose Related Improvements**	\$2,145,000

*Estimate based on 2011 rates, and may be escalated by 4% annually to the effective date of the lease to account for inflation.

**Represents lump sum payment to Lessor to design and build out space for clinical use; not included in base rent.

Page Intentionally Left Blank.

**Springfield, Missouri
Community Based Outpatient Clinic**

This proposal provides for a replacement Community Based Outpatient Clinic in Springfield, MO, supporting the parent facility of the Veterans Health Care System of the Ozarks in Fayetteville, AR.

I. Budget Authority

Lease Through	2012 Request	2012 Authorization Request	Unserviced Annual Rent
2034	\$6,489,240	\$6,489,240	\$2,749,240

II. Description of Project

This project proposes the lease of an approximately 68,000 net usable square feet (NUSF) Community Based Outpatient Clinic (CBOC) in Springfield, Missouri, and will include 544 parking spaces. The new CBOC will relocate and expand the 41,000 NUSF Gene Taylor Outpatient Clinic from Mount Vernon, Missouri, where it currently serves over 17,000 unique Veterans. Due to budget limitation, the State of Missouri has elected to close the Missouri Rehabilitation Center (MRC) in Mount Vernon, where the current clinic is located, and will be unable to continue to support the current lease agreement. Moving the CBOC to Springfield, Missouri, will better support the Veterans Health Care System of the Ozarks’ (VHSO) strategic initiatives. The new CBOC will continue to provide primary and specialty care, mental health and ancillary services. The new clinic will also provide sleep studies, radiology, Magnetic Resonance Imaging (MRI), laboratory, and dental services.

Approval of this prospectus will constitute authority for up to 20 years of leasing, as well as potential extension of the present lease as may be necessary pending execution of the replacement lease.

III. Priorities/Deficiencies Addressed

This lease addresses three critical priorities that will enhance Veteran healthcare services in the Springfield area.

First, it will improve Veteran access to services by locating the replacement CBOC in an area with higher Veteran population. The Upper Western Market of VISN 16 has a significant primary care access gap identified by the Health Care Planning Model. This project will increase the number of unique Veterans within the 30-minute drive time for primary care access by 6,750 Veterans.

Second, the new CBOC will increase clinical capacity for primary and specialty care, mental health and ancillary services, improving patient satisfaction through expanded services, shorter wait times and more timely appointments, and allow for space

configurations consistent with patient-centered care principles. Expanding the CBOC by approximately 27,000 NUSF will address the utilization gap in the Upper Western Market by approximately 308,000 outpatient visits in primary care, mental health, specialty, and ancillary services.

Third, the relocated and expanded CBOC will improve efficiency and lower operating costs. The functional relationships in the new space will provide a more efficient layout of departments and rooms. The new building envelope will be more energy efficient than the current MRC. In addition, direct yearly operating costs are expected to be reduced by \$2,550,000, including reduced beneficiary travel of \$500,000; reduced contracting of diagnostic services of \$1,900,000; and reduced contracting of sleep study services of \$150,000.

IV. Alternatives to Lease Considered

Alternative 1 - Status Quo: The status quo would continue to lease 41,000 NUSF for the Gene Taylor Outpatient Clinic in the MRC from the State of Missouri. This alternative would continue to contract out laboratory, radiology and sleep studies from the MRC. This option is not optimal for three reasons. First, the State of Missouri is proposing to close the MRC on June 30, 2011. In order to continue to support the existing lease, the MRC has proposed a surcharge to the existing lease of over \$1 million per year. This additional funding is needed to staff MRC facility operations after the facility is closed for state operations. Second, due to a significant utilization gap in the VISN 16 Upper Western Market, it is necessary to expand the Gene Taylor Outpatient Clinic to meet demand. Additional space is needed to support in-house laboratory and radiology functions that are currently purchased by contract from the MRC. Third, the existing space at MRC is inefficient. A complete renovation would be needed to bring the space into compliance with VA space planning criteria and life safety guidelines.

Alternative 2 - New Lease (Preferred alternative): This project proposes a build-to-suit lease of approximately 68,000 NUSF to expand and relocate the Gene Taylor Outpatient Clinic to Springfield, Missouri. There are several reasons why this option is the most preferred alternative. First, relocating to Springfield, Missouri would bring the clinic closer to the Veteran population and would reduce the access gap in the VISN 16 Upper Western Market by 6,750 Veterans. Second, the lease would provide additional space for the expansion of services that would reduce the Upper Western Market utilization gaps in primary care, mental health, and specialty care. It would also allow VA to bring in-house, at lower cost, ancillary services such as laboratory and radiology that are currently contracted out. Finally, a build-to-suit lease provides VA with the flexibility to adjust services based on changes in enrollment and Veteran demographics without the up-front investment needed in the new construction alternative.

Alternative 3 – Contract Out Services: This alternative would seek to contract out all services currently offered at the Gene Taylor Outpatient Clinic as well as the projected workload increase. Challenges for this option include maintaining quality of care across numerous contracts and providers and finding sufficient health care capacity in the community to absorb current and projected VA workload. Health care demand in the area has already stressed capacity of private sector resources; nine of 11 counties in the catchment area served by the Gene Taylor Outpatient Clinic are medically underserved. Therefore, this alternative is the least preferred.

Alternative 4 – New Construction: This alternative proposes to purchase 10 acres of land in the Springfield area and construct a 68,000 NUSF outpatient clinic. This alternative shares many of the benefits of the preferred lease alternative. First, relocating in Springfield, Missouri brings the clinic closer to the Veteran population and will reduce the access gap in the VISN 16 Upper Western Market by 6,750 Veterans. Second, the VA-owned facility would provide additional space for expansion of services to reduce the Upper Western Market utilization gaps in primary care, mental health, and specialty care and bring in-house, at lower cost, ancillary services such as laboratory and radiology that are currently contracted out. Third, this alternative will have a longer implementation timeline than the preferred lease option. Therefore, this alternative is the second preferred.

V. Demographic Data*

	<u>2009</u>	<u>2019</u>	<u>2029</u>	<u>Change</u> <u>(2009-2029)</u>

Enhanced- Use Leases

Enhanced-Use Leasing is an important component of the Department of Veterans Affairs' overall asset management program. The program is unique among Federal agencies, and is considered an innovative method of acquiring needed facilities, goods, and services to assist the Department in achieving its asset goals and objectives.

In return for allowing VA property to be used for non-VA uses (which must be compatible with or benefit the Department's mission) on Department-controlled land, VA can require rent in the form of, monetary payments or other "in-kind" consideration, which in the opinion of the Secretary enhances a particular VA activity's mission.

The program was authorized by law in 1991 and is managed by the Office of Asset Enterprise Management in the Office of the Assistant Secretary Management. Since the program's inception, VA has awarded 60 leases and is actively engaged in developing approximately 81 additional projects. A listing of the 60 awarded enhanced-use lease projects can be found in appendix E. The additional projects being developed can be found in appendix F, Secretary's Approved Priority Enhanced-Use Lease Projects and appendix G, Building Utilization Review and Repurposing Proposed Enhanced-Use Lease Projects.

Page Intentionally Left Blank

Strategic Capital Investment Planning Process Project List

Background

VA prioritized construction projects utilizing the newly implemented Strategic Capital Investment Planning (SCIP) process. SCIP is an innovative Department-wide planning process that resulted in the creation of a single, integrated prioritized list of projects from all capital investment accounts (major construction, minor construction, and VHA non-recurring maintenance (NRM)). SCIP is designed to improve the delivery of services and benefits to Veterans, their families and survivors by addressing VA's most critical needs and/or performance gaps first, investing wisely in VA's future and significantly improving the efficiency of VA's far-reaching and wide range of activities. The list below does not include approximately \$281.5 million for emergent needs and below threshold non-recurring maintenance and minor construction projects that will be allocated during execution.

Integrated Priority List for 2012

(projects are in priority order)

Capital Program Key: Major - Major Construction

Minor - Minor Construction

NRM-GM -Non-Recurring Maintenance Green Management

NRM-II -Non-Recurring Maintenance Infrastructure Improvement

NRM-SU -Non-Recurring Maintenance Sustainment

VA Capital Budget Request.....	8.1 - 2
SCIP Legislative and Executive Requirements.....	8.1 - 3
2012 Top Twenty Major Medical Facility Requirements.....	8.1 - 4
Chapter 8.2: VA Strategic Capital Investment Planning Process Overview	8.2 - 1
Introduction.....	8.2 - 1
SCIP Process.....	8.2 - 2
SCIP Gaps.....	8.2 - 4
SCIP Capital Project Process.....	8.2 - 5
Development of SCIP Decision Criteria.....	8.2 - 5
SCIP Decision Criteria.....	8.2 - 6
Project Prioritization.....	8.2 - 7
Stakeholder Involvement.....	8.2 - 7
Capital Asset Inventory.....	8.2 - 7
Applying the Prioritization Process to the Construction Programs Budget Request	8.2 - 10
Leases.....	8.2 - 85
Chapter 8.3: Veterans Health Administration	8.3 - 1
Introduction.....	8.3 - 1
Action Plan Strategy.....	8.3 - 2
VHA Gaps.....	8.3 - 2
SCIP Estimated 10-Year Magnitude Costs.....	8.3 - 9
VISN 1.....	8.3 - 11
VISN 2.....	8.3 - 35
VISN 3.....	8.3 - 45
VISN 4.....	8.3 - 61
VISN 5.....	8.3 - 81
VISN 6.....	8.3 - 97
VISN 7.....	8.3 - 117
VISN 8.....	8.3 - 135
VISN 9.....	8.3 - 149
VISN 10.....	8.3 - 163
VISN 11.....	8.3 - 177
VISN 12.....	8.3 - 191
VISN 15.....	8.3 - 207
VISN 16.....	8.3 - 221
VISN 17.....	8.3 - 237
VISN 18.....	8.3 - 247
VISN 19.....	8.3 - 263

	Page No.
VISN 20.....	8.3 - 279
VISN 21.....	8.3 - 291
VISN 22.....	8.3 - 309
VISN 23.....	8.3 - 327
Chapter 8.4: National Cemetery Administration.....	8.4 - 1
Introduction.....	8.4 - 1
Linkage to Strategic Goals.....	8.4 - 1
Meeting Current and Future Burial Needs.....	8.4 - 2
New Burial Policies	8.4 - 3
National Shrine Commitment.....	8.4 - 5
Action Plan Strategy	8.4 - 5
NCA Gaps	8.4 - 5
Energy	8.4 - 7
SCIP Estimated 10-Year Magnitude Costs.....	8.4 - 7
Chapter 8.5: Veterans Benefits Administration	8.5 - 1
Introduction.....	8.5 - 1
Action Plan Strategy	8.5 - 1
VBA Gaps	8.5 - 1
Energy	8.4 - 2
SCIP Estimated 10-Year Magnitude Costs.....	8.4 - 2
Chapter 8.6: Staff Offices.....	8.6 - 1
Introduction.....	8.6 - 1
OIT Action Plan Strategy.....	8.6 - 1
OIT Gaps	8.6 - 1
Energy	8.6 - 2
SCIP Estimated 10-Year Magnitude Costs.....	8.6 - 2
HRA Action Plan Strategy.....	8.6 - 6
OALC Action Plan Strategy	8.6 - 7
GC & Financial Service Action Plan Strategy	8.6 - 7
Staff Office Gaps.....	8.6 - 7
SCIP Estimated 10-Year Magnitude Costs.....	8.6 - 8
Chapter 8.7: Other Capital Initiatives	8.7- 1
Building Utilization Review & Reuse (BURR) Initiative.....	8.7 - 1
Homelessness.....	8.7 - 1
Energy/Greening VA.....	8.7 - 1
VA/DoD Collaboration & Sharing	8.7 - 2
Chapter 8.8: Conclusion	8.8- 1
Chapter 9: VA Capital Program Initiatives.....	9 - 1
Chapter 9.1: Enhanced-Use Leasing.....	9.1 - 1
Enhanced-Use Leasing Program.....	9.1 - 1
Authority.....	9.1 - 1
Benefits to Veterans.....	9.1 - 2
Benefits to VA.....	9.1 - 2
Benefits to Developers and Local Community.....	9.1 - 3
Transparency.....	9.1 - 3
Awarded Enhanced-Use Leases.....	9.1 - 4
Recent Enhanced-Use Lease Successes.....	9.1 - 4
Mission Homeless and Site Review.....	9.1 - 5
Building Utilization Review and Reuse	9.1 - 6
Enhanced-Use Leasing Authority Sunsets at End of 2011.....	9.1 - 6

Table of Contents

	Page No.
Chapter 9.2: Green Management Program	9.2 - 1
Background.....	9.2 - 1
Roles and Responsibilities.....	9.2 - 1
Data & Reporting.....	9.2 - 2
VA Required Reporting Measures.....	9.2 - 2
Energy Data Collection and Reporting.....	9.2 - 5
Budget.....	9.2 - 7
Highlights and Accomplishments.....	9.2 - 10
Future Plans.....	9.2 - 15
Chapter 9.3: Federal Real Property Metrics	9.3 - 1
Capital Asset Management	9.3 - 1
Asset Performance Management	9.3 - 8
Real Property Asset Metrics and Results	9.3 - 11
Future Plans.....	9.3 - 16
Chapter 9.4: Collaboration with the Department of Defense	9.4 - 1
Introduction.....	9.4 - 1
VA/DoD Joint Executive Council Strategic Plan.....	9.4 - 2
VA/DoD Collaborative Projects.....	9.4 - 2
Community Based Outpatient Clinics.....	9.4 - 3
Minor Construction Program	9.4 - 4
Other Potential Future VA/DoD Collaborative Projects	9.4 - 5

Executive Summary

VA's 10-Year Strategic Capital Investment Plan (SCIP)

The Department's 10-Year Action Plan is the culmination of VA's Strategic Capital Investment Planning process. The plan supports the annual budget request and reflects the difficult trade-offs between funding the operational expenses for existing assets, and acquiring new assets by the most cost-effective means in order to enhance benefits and health care service delivery to Veterans in the 21st century.

The plan is a living document reflecting changes in the composition and alignment of assets. It describes the process, criteria and philosophy applied to acquisition management and disposal decisions. It represents a snap shot in time based on current state of VA's capital portfolio and projected needs. The magnitude cost estimates provided are also based on current market conditions and these estimates will be modified as projects move ahead in the process (from action plan to business case etc). The SCIP plan is the central document describing the selection of the Department's key capital acquisitions needed to close the critical performance gaps (including access, utilization, facility condition, safety, energy, and space) within the prescribed 10 year period. The 2012 - 2021 SCIP plan reflects the need to execute 4,808 VA capital projects to close critical gaps and meet targets. Based upon the current cost estimates, full implementation of all capital projects identified in the SCIP plan would require total resources of between \$53 and \$65 billion, not including costs to activate or operate the projects.

The SCIP process and associated results have undergone a formal executive review process, developed by senior management, and have been approved by the Secretary – thus ensuring that the plan is closely aligned with the Department's strategic goals and mission. Individual chapters for VHA, VBA, NCA and Staff Offices within the plan contain a brief narrative description of their strategic plans and identify the capital investment projects necessary to close current gaps.

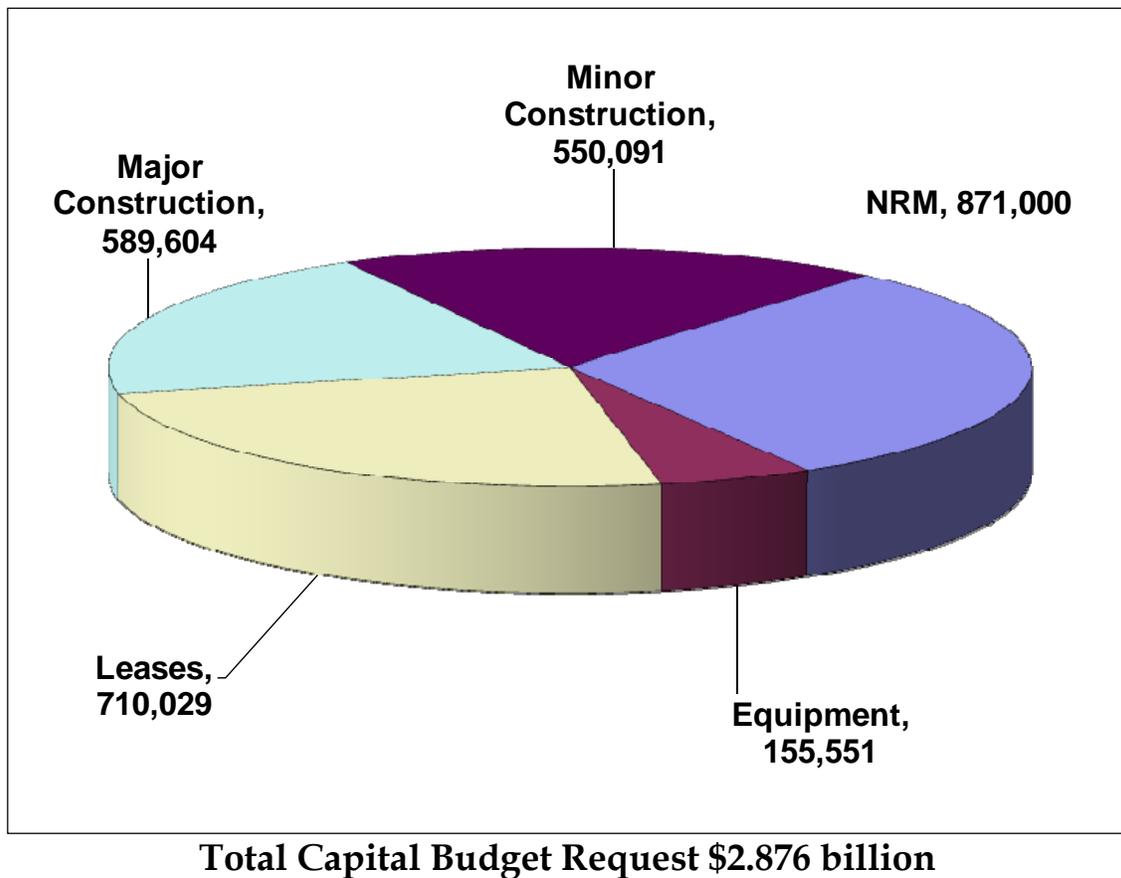

The SCIP process relies on gap analyses and projections of facility utilization to identify performance gaps in the areas of safety, security, utilization, access, seismic protection, facility condition, space, parking, and energy. On the basis of these identified gaps, SCIP provides a system-wide capital needs assessment that

drills down to the specific regional-, network-, and facility-level investments and resources required to close these gaps. The result is a 10-Year Capital Plan which comprehensively integrates capital planning across all VA Administrations and produces a single Department-wide prioritized list of projects for the budget year request. This list served as the main driver for the formulation of the 2012 capital budget request.

The 2012 capital budget request by funding category is provided below:

VA Capital Budget Request

Figure E-1: 2012 VA Capital Budget Request

The 2012 VA capital budget request of \$2.876 billion includes investments in a number of asset categories across several organizations and accounts within VA.

This plan also includes appendices (beginning on page 10-1) containing detailed information referenced throughout the chapters.

SCIP -- Legislative and Executive Requirements

The Department's 10-Year Capital Plan complies with the recommendations from the Office of Management and Budget's (OMB) *Capital Programming Guide*. The plan fulfills OMB requirements in support of the annual budget request for capital investments. In addition, the plan meets the following Congressional and Executive requirements:

- The 2011 Senate Report 111-226 directed the Department to submit with the fiscal year 2012 budget request all findings associated the Strategic Capital Investment Planning Process.
- Conference Report 109-305 and Senate Report 109-105 directed VA to update its 5-year strategic plan for capital asset management.
- Conference Report 111-366 reiterated the need for an annual 5-year capital plan.
- Section 8107 of title 38, United States Code, mandates the top twenty medical facility projects be reported annually by the Department. The top twenty list is presented below.
- Complies with Executive Order 13327, Federal Real Property Asset Management, dated February 4, 2004 and Federal Real Property Council Principles.
- Public Law 108-422 and accompanying report language instructed the Department is to provide a long-term and short-term disposal plan to the Congress.
- Executive Order 13514, Federal Leadership in Environmental, Energy, and Economic Performance, dated October 5, 2009, creates numerous requirements in areas such as energy intensity reduction, greenhouse gas inventorying, water consumption reduction, sustainable acquisitions, amongst others.
- Executive Order 13423, Strengthening Federal Environmental, Energy, and Transportation Management, dated January 24 2007, creates energy, environmental and transportation mandates including the requirement that agencies establish and report on Environmental Management Systems at all appropriate levels.
- The Energy Independence and Security Act of 2007 (PL 110-140), contains numerous requirements related to the reduction of energy and water consumption and the use of alternative fuels, such as the requirement that agencies decrease energy consumption intensity 30 percent by 2015.
- The Energy Policy Act of 2005 (PL 109-58), contains numerous energy and water requirements, including the requirement that VA install electric meters in buildings by October 1, 2012.

2012 Top Twenty Major Medical Facility Projects

In accordance with section 8107 title 38, Table 5-7 on the following page provides the top twenty medical facility projects that were considered for the 2012 budget. These projects were selected based on the Department-wide Strategic Capital Investment Planning (SCIP) criteria. This list is comprised of the partially funded project from previous years. Projects remain on the top twenty list until they are fully funded.

Table E-1: 2012 Top Twenty Major Medical Facility Projects

#	VISN	Location		Project Title - Brief Description	Priority Score	Total Est. Cost (\$000)	Category
The projects listed below were funded in phases in prior years and are therefore considered as top priority projects until funding is completed. Priority scores are from the FY 2005 cycle project scoring session.							
1	19	Denver	CO	New Medical Facility	.3424	\$800,000	General
2	8	San Juan	PR	Seismic Corrections-Bldg 1	.2888	\$277,000	Seismic
The project listed below was funded by an emergency supplemental appropriation in FY 2006, therefore was not scored and prioritized as part of the Departmental Capital Investment Planning Process.							
3	16	New Orleans	LA	New Medical Facility	N/A	\$995,000	General
The project listed below was funded in a phase in a prior year and is therefore considered as a top priority project until funding is completed. The priority score is from the FY 2007 project scoring session.							
4	15	St. Louis(JB)	MO	Medical Facility Improvements/Cemetery Exp	.1768	\$346,300	General
The project listed below was funded in a phase in a prior year and is therefore considered as a top priority project until funding is completed. The priority score is from the FY 2008 project scoring session.							
5	21	Palo Alto	CA	Ambulatory Care/Polytrauma Rehabilitation	.5631	\$716,000	General
The projects listed below were funded in a phase in a prior year and is therefore considered as a top priority project until funding is completed. The priority score is from the FY 2009 project scoring session.							
6	8	Bay Pines	FL	Inpatient/Outpatient Improvements	.6620	\$158,200	General
7	20	Seattle	WA	Seismic NHCU Bldg 100	.5477	\$51,800	Seismic
8	20	Seattle	WA	Mental Health Bldg 101	.5142	\$211,700	General
9	17	Dallas	TX	Spinal Cord Injury	.5032	\$89,000	General
10	9	Louisville	KY	New Medical Facility	.4825	TBD	General
11	22	West Los Angeles	CA	Seismic Corrections of 12 Buildings	.4602	\$346,900	Seismic
12	3	Bronx	NY	Spinal Cord Injury	.4576	\$225,900	General
13	20	American Lake	WA	Seismic Corrections Bldg 81	.4373	\$52,600	Seismic
14	17	Dallas	TX	Clinical Expansion for Mental Health	.4346	\$156,400	General
The projects listed below are additional projects considered for the FY 2010 planning cycle. The priority scores are from the FY 2010 project scoring session.							
15	21	Livermore	CA	Realignment and Closure	.4855	\$354,300	General
16	2	Canandaigua	NY	Construction and Renovation	.3603	\$370,100	General
17	22	San Diego	CA	Spinal Cord Injury and Seismic Deficiency	.3561	\$195,000	Seismic
18	22	Long Beach	CA	Seismic Corrections - Mental Health and Community Living Center	.3490	\$258,400	Seismic
19	15	St. Louis (JC)	MO	Replace Bed Tower/Clinic Expansion	.3413	\$433,400	General
20	1	Brockton	MA	Long-Term Care Spinal Cord Injury	.3354	\$188,000	General

Table E-2: Seismic/Safety Projects in Priority Order

Location		Project Title - Brief Description	Priority Score
San Juan	PR	Seismic Corrections-Bldg 1	.2888
Seattle	WA	Seismic NHCUC Bldg 100	.5477
Los Angeles	CA	Seismic Corrections of 12 Buildings	.4602
American Lake	WA	Seismic Corrections Bldg 81	.4373
San Diego	CA	Spinal Cord Injury and Seismic Deficiency	.3561
Long Beach	CA	Seismic Corrections - Mental Health and Community Living Center	.3490

Brockton	MA	Long-Term Care Spinal Cord Injury	.3354

Chapter 8.2

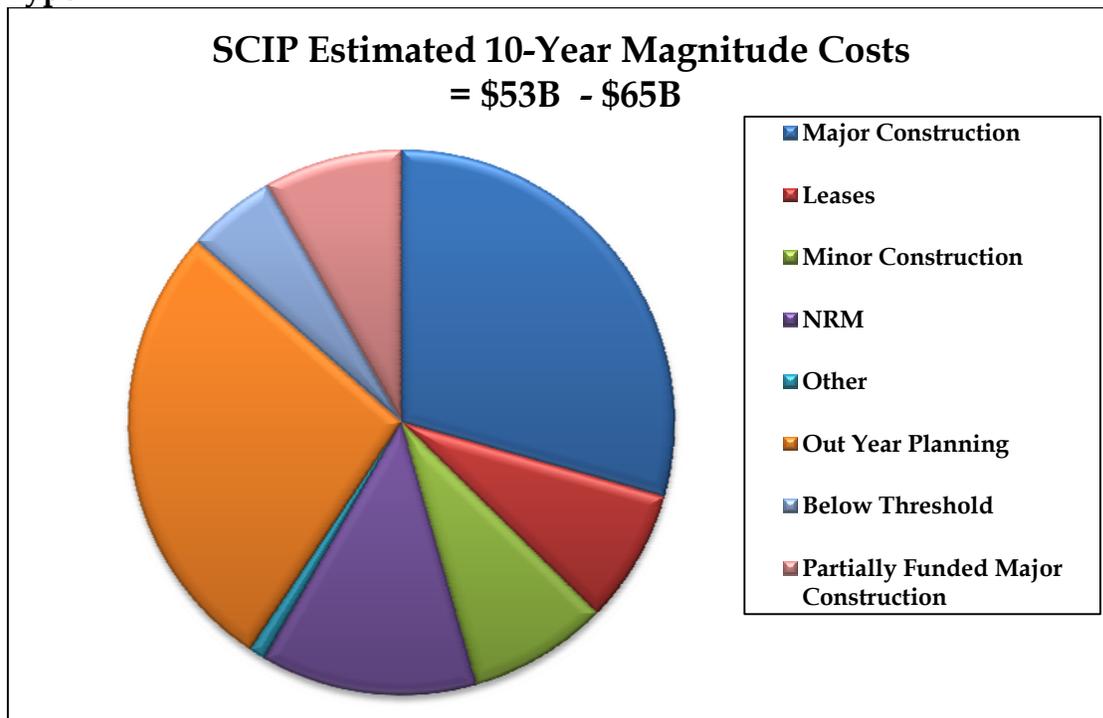

VA Strategic Capital Investment Planning Process Overview

Introduction

The Strategic Capital Investment Planning process is designed to focus all capital investments on addressing VA's most critical infrastructure needs, based on clearly defined standards and ongoing assessments. The SCIP process will be used to substantiate 2012 and future VA funding requests. Specifically, SCIP provides:

- A comprehensive planning process across all Administrations, based on addressing defined gaps.
- A Department-wide list of projects.
- A Department-level overview of estimated magnitude costs while providing details at local, VISN, and regional levels.
- A 10-year Capital Plan (Action Plan) focused on reducing gaps, increasing efficiencies and providing better services to Veterans.
- Increased involvement of stakeholders.

Figure 2-1: SCIP Estimated 10-Year Magnitude Costs by Capital Investment Type

Through the SCIP process, the Action Plans developed by each VHA VISN, NCA, VBA, OIT, and the Staff Offices are consolidated into a Department-level plan that will ensure delivery of services in a Veteran-centric, forward-looking, and results-driven manner. SCIP mandates that all capital investments in the Action Plans address the Department's following strategic goals:

Improve Delivery of Services and Benefits

- Maintain or increase accessibility to meet Veteran demand
- Increase quality
- Ensure safety and security

Invest in the Future

- Provide adequate space to meet future needs
- Optimize impact of investment in buildings and infrastructure
- Repurpose underutilized assets to meet Veterans' needs (e.g. combating homelessness)
- Increase use of renewable energy sources

Improve Efficiency of Operations

- Increase efficiency while decreasing costs
- Explore alternatives to identify best value
- Repurpose or dispose of vacant or underutilized assets

SCIP Process

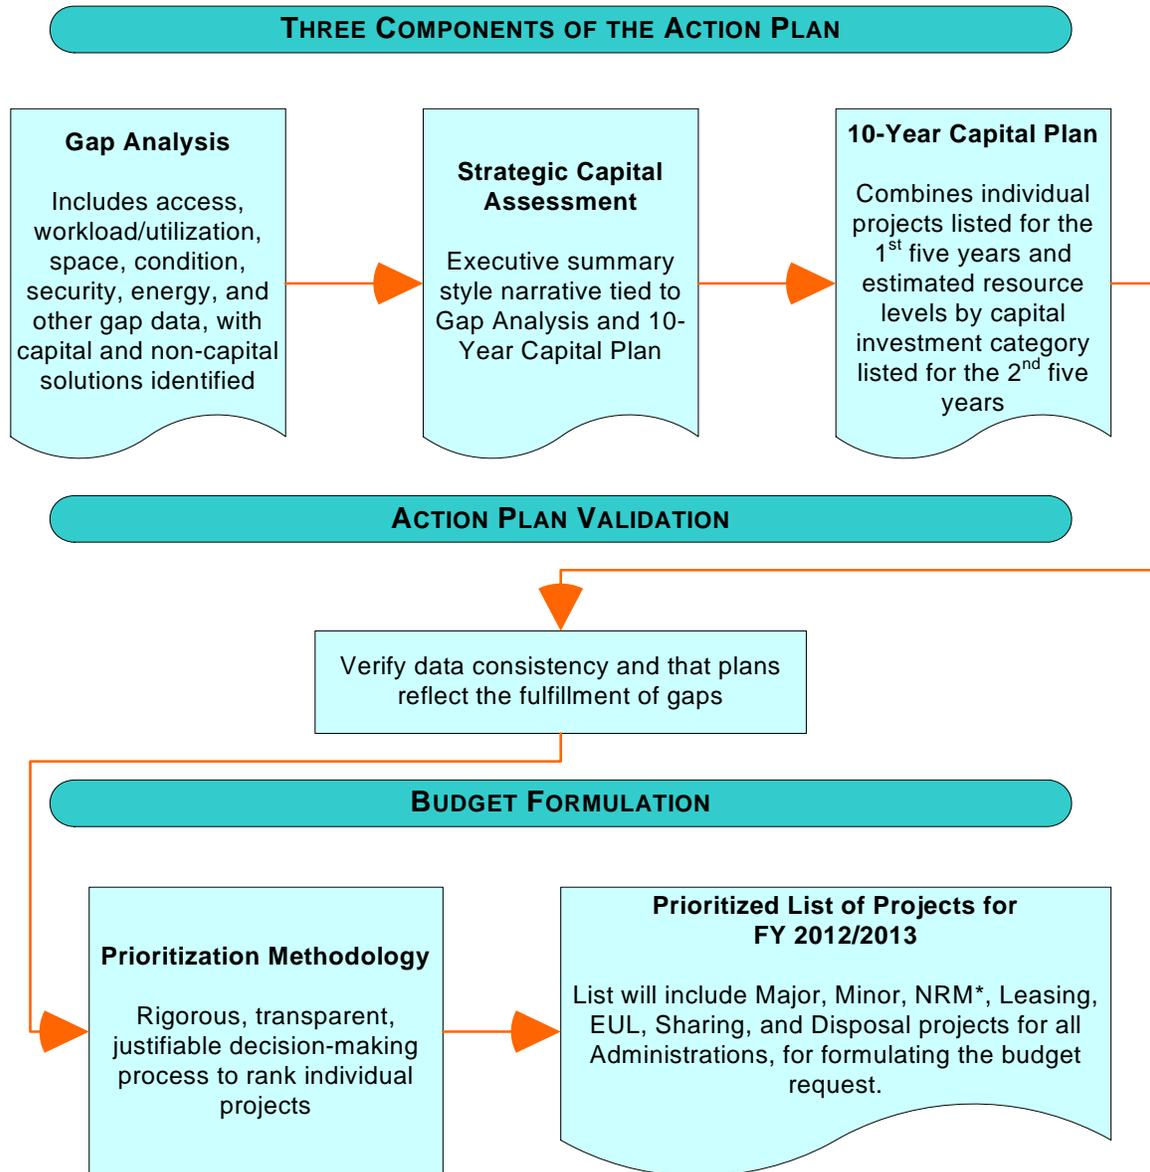

The ultimate goal of the SCIP process is to create a 10-year action plan that identifies necessary capital projects to close all Departmental infrastructure gaps to support the delivery of benefits and services to Veterans. There are five main components of the SCIP Process:

1. **Gap Analysis:** Access, utilization/workload, space, condition, energy, safety, security, parking deficiencies, IT deficiencies, and other, such as function, privacy, and emergency preparedness (for an in-depth discussion of gaps see the next section);
2. **Strategic Capital Assessment (SCA):** Individual VISN/MSN-wide strategic approach to ensure all proposed capital investments are aligned with future Veteran needs;
3. **10-Year Action Plan:** Project specific planned investments in accordance with the Strategic Capital Assessment and designed to correct the identified gaps within a 10-year planning horizon;
4. **Budget Formulation:** A single, integrated list of the highest priority capital investment projects for inclusion in the President's annual Budget Submission; and,
5. **Feedback:** Key internal and external stakeholder participation, review and input.

The flow chart below illustrates the relationship between the different components comprising the SCIP process.

Figure 2-2: SCIP Process

Strategic Capital Investment Planning
Major and Minor Construction, Non-recurring Maintenance (NRM)*, Leasing, Enhanced-Use Leasing (EUL), Sharing, Disposal, and Other Investments

*This capital asset category includes the sub-categories of: sustainment, infrastructure improvements, green management, and leasing.

Each Administration and VHA VISN was provided with a pre-populated “gap template,” on the basis of which they developed a Strategic Capital Assessment (SCA) outlining a strategic plan to correct identified gaps within a 10-year planning horizon. These strategic long term plans contain project-specific capital investments required to correct identified gaps and met established targets. All of the SCAs and Action Plans were reviewed and validated by the SCIP Board, which is comprised of high-ranking representatives from across VA Administrations and staff offices. Once Action Plans were approved through the VA governance process, 2012 Business Cases were prepared for all projects above established dollar thresholds. Over 1,100 businesses cases were scored using the 2012 SCIP Decision Criteria Model (see appendix A) and prioritized into a single list of 2012 projects. This list was submitted for approval through the VA governance process and included in the 2012 budget submission.

SCIP Gaps

In order to achieve the Department’s strategic goals, VA must fully understand Veterans’ unmet needs and the continuing changes in Veteran demographics, medical and information technology, and health care delivery. In the development of the SCIP process, the three broad criteria of Improving Delivery of Benefits and Services, Investing in the Future, and Improving the Efficiency of Operations were identified as requirements for capital investment across VA’s portfolio. These criteria provided a framework upon which VA defined the following main deficiency categories (or “gaps”):

1. **Access Gap:** defined as the ability of Veterans to obtain needed services within a defined geographical area, as defined by drive-time or distance. This gap applies only to VHA (primary care) and NCA.
2. **Utilization Gap:** For VHA, defined as the difference between current workload and projected 2018 demand for outpatient clinic stops and inpatient bed days of care.
3. **Space Gap:** Defined as the difference between current space inventory and projected 2018 space need.
4. **Condition Gap:** Defined as the cost estimate to correct all currently-identified deficiencies in buildings and infrastructure.
5. **Energy Gaps:** The energy gap is based on compliance with VA Federal and Departmental energy goals. The Energy Policy Act of 2005, the Energy Independence and Security Act of 2007, and related executive orders require Federal agencies to achieve energy efficiency; increase use of renewable energy, alternative fueling, and sustainable building; and reduce greenhouse gas emissions. Department-wide energy targets are to reduce energy consumption per gross square foot by 3% annually, decrease water usage per gross square foot by 2% annually, and increase renewable energy use by 15% by 2013. Additionally, the Department seeks to achieve energy efficiency and related cost savings at a level 30% higher

than what is dictated by current building standards. All Federal government construction projects must comply with sustainability, energy, water reduction, and renewable energy requirements.

- 6. Other Gaps:** Includes correcting safety, security, and privacy issues; seismic corrections in existing buildings; and energy efficiency and sustainability goals.

At the beginning of the SCIP process, each Administration (NCA, VBA, OIT and Staff Offices) and VHA VISN was provided gap data that demonstrated the difference (or “gap”) between current or baseline state(including infrastructure being constructed or in the process of being acquired) and future projected (2018) need, and compared them to corporate targets for closing these gaps. These assets or means to close these gaps formed the basis for each 10-year Action Plan. The baseline data, from corporate databases, included access, utilization/workload, space, condition, and energy data.

SCIP Capital Project Process

SCIP culminated in the creation of a single, Department-wide list of capital projects for submission in the 2012 budget. This list includes major and minor construction, non-recurring maintenance projects, and leases.

For each project over the asset specific thresholds (dollar amounts), the Administrations submitted a business case using a web-based application in the Capital Asset Management System (CAMS) Tool. Each business case was validated and scored by a SCIP panel, composed of representatives from across VA. Each project’s combined score is based on the project’s contribution to reducing the gaps defined in the SCIP Decision Criteria and their relative weights.

Development of SCIP Decision Criteria

A multi-attribute decision methodology -- the analytic hierarchy process (AHP) -- was used to develop the decision criteria weights and score the business cases. This methodology facilitates complex decision making by allowing multiple evaluators to consider a number of diverse criteria when making a decision. A diagram of the capital investment decision model, including priority weights used for the 2012 budget and planning cycle, can be found in Appendix A.

The Decision Criteria weights were developed based on the recommendations of the SCIP Board and approved through the VA governance process. These weights were then applied to the Business Case scores to develop a prioritized list of 2012 capital projects

SCIP Decision Criteria 2012 Capital Projects were ranked based on the following six criteria:

- **Improving Safety and Security:** VA is dedicated to serving its Clients (Veterans) while ensuring that Clients and Customers (VA Staff) operate in a safe and secure environment. Priorities include mitigating destruction and/or injury caused by natural or manmade disasters (seismic events, hurricanes, flooding, blasts, etc.); improving compliance with Federal and State safety, security, and building code regulations; and ensuring VA mission-critical buildings are able to provide services in the wake of a catastrophic event.
- **Fixing What We Have (Making the Most of Current Infrastructure/ Extending Useful Life):** VA is committed to minimizing the impact that deficiencies in infrastructure (including IT infrastructure) have on the delivery of benefits and services to Veterans. Facility Condition Assessments (FCAs) are used to evaluate the condition of VA buildings. Based on these assessments, various facility systems are given a score of A through F; this criterion assess how much of the total project cost is dedicated to eradicating the lowest FCA deficiencies. Non-infrastructure deficiencies – such as functional, privacy, and parking deficiencies – also impact VA’s ability to deliver benefits and services to Veterans, and thus are included in the SCIP process.
- **Increasing Access:** Serving Veterans is at the core of VA’s mission. VA continually strives to increase Veteran access to VA services by reducing the time and distance a Veteran must travel to receive services and benefits. Other measures designed to increase Veterans’ access to services include providing adequate support structures at VA facilities, such as parking or gravesite locators, and increasing workload capacity at VA facilities to insure Veterans have access to the services they need.
- **Right-Sizing Inventory:** In order to provide the highest quality service to Veterans while serving as a responsible steward of taxpayer funds, VA is committed to right-sizing its space inventory. The SCIP process is designed to identify where new space is needed to meet demand, where excess space should be reduced in order to operate more efficiently, and opportunities to convert or repurpose underutilized space to better suit VA’s mission.
- **Ensure Value of Investment:** As a steward of the public’s trust, VA is responsible for ensuring capital investments are cost-effective and that they optimize operating and maintenance costs in order to create the best value for taxpayers.

- **Major Initiatives:** In order to improve management and performance across the Department, capital projects are expected to contribute to key major and supporting initiatives from the Department's strategic plan. These initiatives support VA's Veteran-Centric, Forward-Looking, and Results-Driven Strategic Principles.

Project Prioritization

Each 2012 Business Case was evaluated by SCIP Panel members who scored each project based on its contribution to the goals and missions of each sub-criterion. Decision software was used to apply the criteria weights to the Panel scores and generate a list of priority-ranked investments. The SCIP Panel then provided recommendations to the VA Strategic Management Council (SMC) on which projects to include in the annual budget request to OMB. The SMC recommended approval of scored proposals to the VA Executive Board (VAEB) who then submitted them to the Secretary for final approval.

Stakeholder Involvement

One of the strengths of the VA capital investment planning process is that it encourages continual improvement and refinement in response to client and customer needs. VA has engaged and will continue to engage stakeholders in the SCIP process as it evolves. External stakeholders were briefed periodically throughout the SCIP process and on the main decision criteria that would be used to prioritize projects. Stakeholders included the Veterans Service Organizations, Congressional Staff, GAO and the Office of Management and Budget. Feedback provided at these briefings was incorporated into the SCIP process and methodology. Engaging stakeholders allows for transparency and provides valuable input. This input will be continually monitored and annually incorporated into the SCIP process to address changing needs and priorities. Continual dialog with VA's clients and customers will maximize stakeholder involvement while allowing the SCIP process to drive VA's current and future year capital budget submissions.

Capital Asset Inventory

The SCIP process looks at existing portfolio of capital assets as well as those that are in the process of being built and future needs. VA has a vast holding of diverse capital assets consisting of Government (VA) owned buildings and real estate, VA-leased buildings, and enhanced-use leases and sharing agreements pertaining to capital assets and major equipment. Assets include hospitals, clinics, cemeteries, office buildings, and medical and non-medical equipment. The number and composition of assets in the VA portfolio is constantly changing in response to VA needs and decisions by the Secretary. The following table summarizes VA's recent capital holdings.

Table 2-1: VA Capital Asset Inventory

VA Capital Asset Management System	VA Capital Asset Inventory - Data As Of 10/1/2010									
	Owned Assets					Leased Assets		Asset-Related Agreements		
	Bldgs.	Historic Bldgs.	SF	Vacant SF	Acres	Leases	SF	Enhanced Use Leases*	Outlease Agreements**	Sharing Agreements
VHA	5,164	1,594	139,553,761	5,720,386	15,454	1,384	11,861,561	44	318	206
VBA	18	0	825,654	5	0	189	4,116,959	0	0	2
NCA	351	118	887,829	10,441	18,099	4	19,941	1	3	0
Staff	8	1	1,606,784	0	165	52	1,775,670	2	1	0
VA TOTALS	5,541	1,713	142,874,028	5,730,832	33,718	1,629	17,774,131	47	322	208
								* Includes only Awarded EU Agreements		
								** Includes Outleases, Permits, Licenses, Intra-Agency, and Inter-Agency Agreements		
Department of Veterans Affairs Office of Asset Enterprise Management										

Each Administration and VHA VISN used the gap data provided to develop an Action Plan that ties specific capital investments to reductions and/or mitigations of gaps over a 10-year period. The SCIP plan identified 4,808 capital projects that would be necessary to close all identified gaps over a ten year period with an estimated magnitude cost of between \$53 and \$65 billion. It is important to note that this estimate is a snap shot in time, it is based on current market conditions, baseline capital portfolio and demographic data and projected needs. The cost estimates provided will likely change as projects move through the investment process and cost estimating and project requirements become more refined. For example, estimates are fine tuned from action plan to business case to project prospectus (for major construction) to final design and construction documents. The magnitude estimate does not include activation (start up) costs, however VA is planning to develop a methodology to allow the Department to incorporate activation costs for future SCIP plans. Additionally, the SCIP action plan projects do not include life cycle costs in their estimates.

Table 2-2: VA Capital Investment Projects by Type

VA	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction ²	4	1490	153	15,922
Leases	62	713	169	3,979
Minor Construction	78	558	702	4,313
NRM	190	689	3,281	6,879
Other ³	-	-	169	590
Project Specific Subtotal		\$3,450		\$31,683
Out Year Planning (Minors and NRM) ⁴	N/A	N/A	-	16,106
Below Threshold/ Emergent Needs ⁵	TBD	282	-	2,834
Partially Funded Major Construction ⁶	7	450	16	4,403
Total	341	\$4,182	4,490	\$55,026

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²2012 cost reflects the TEC to complete major projects in Reno, Honolulu, West Los Angeles and San Francisco. The 2012 Budget requests \$118.4M to initiate these projects.

³Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

⁴Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁵The Action Plans include under threshold lump sums for NRM and minor construction projects that are below the established dollar amount for project specific inclusion in the action plans. For 2012, VA has a lump sum, below threshold amount of \$281.5 million for emergent needs and below threshold NRMs and minor construction projects that will be allocated during the year.

⁶This line reflects the 2012 Budget request to move forward on the seven partially-funded major construction projects. Any additional resources necessary to complete these projects are included in the 2013-2021 TEC total. Additional information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

Applying the Prioritization Process to the Construction Programs Budget Request

Once the budget year's construction projects are prioritized, a decision must be made about which projects will be included in the annual construction programs budget request. The construction programs budget request consists of partially funded major construction projects from previous years and newly prioritized capital projects for major construction, minor construction, and non-recurring maintenance (NRM). A balance between the commitment to projects funded in prior years and the ongoing commitment to address new critical needs must be met. This is a two-step process:

Step One

Choose the partially funded major construction projects from previous years to be funded based on:

1. The fiscal year in which funding was first received
2. The original priority order from the first funding year
3. The ability to execute a contract award within the budget year

A project on the partially funded listing may be funded out of order due to competing circumstances such as another ongoing project at the facility, which may cause unnecessary complications, or pending decisions about the site that may preclude final consideration of the project.

Step Two

Add newly prioritized capital projects, in priority order, until funding levels for each construction program (by Administration/Staff Office) are reached.

The table on the following pages is the listing of projects used to develop the 2012 construction programs budget request. The first 23 projects listed are partially funded major construction projects from previous years. The following 988 projects are the newly scored projects submitted in the 2012 Strategic Capital Investment Planning (SCIP) cycle in priority order. VA is requesting funding in 2012 for seven of the top 23 partially funded major construction projects from previous years, the top four newly prioritized major construction projects, and various minor construction and NRM projects within the remaining top 303 newly prioritized projects. Costs listed in the 2012 Capital Projects column are estimates and may change with actual contract awards. Several projects were partially funded in order for the construction program to remain within the established funding level. Those projects are designated in the table with the number 1 footnote. A few minor construction projects were not funded although they are within the top 303 projects because the funding level for that program was met. Those projects are designated in the table with the number 2 footnote.

Table 2-3: Development of the 2012 Construction Program Budget Request

Capital Program Key: Major – Major Construction

Minor – Minor Construction

NRM-GM –Non-Recurring Maintenance Green Management

NRM-II –Non-Recurring Maintenance Infrastructure Improvement

NRM-SU –Non-Recurring Maintenance Sustainment

Prior. #	VISN	City	ST	Project Name - Short Description	Total Score	Admin	Capital Prog.	Total Est. Cost (\$000)	Funding To Date (\$000)	2012 Capital Projects (\$000)	2012 Cum. Total (\$000)
Partially Funded Major Construction Projects from Previous Years

Leases

Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table below are expected to be awarded in 2012. Lease costs represent the first year annual unserviced rent plus build out costs. Lease/GSA Space Assignment projects that require Congressional authorization are provided in the table below, with more details on the individual projects provided in Budget Chapter 6 VA Lease Notifications, Major Medical Facility Project & Lease Authorizations.

Table 2-4: Major Medical Facility Leases that Require Congressional Authorization

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as provided in the SCIP Action Plan.

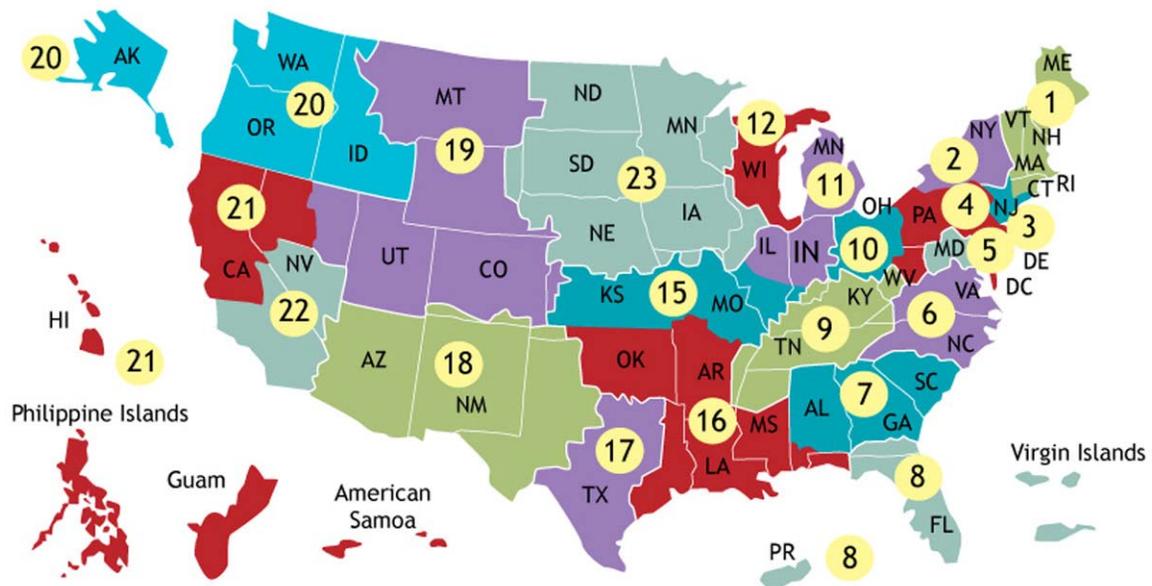

Chapter 8.3

Veterans Health Administration

Introduction

VHA delivers care through 1,139 facilities composed of more than 5,164 buildings and 1,384 leases across the country many of which are located on large, campus-style settings in excess of 50 years old and approximately 30 percent of such buildings are historically significant. VHA facilities are grouped into 21 Veteran Integrated Service Networks (VISNs). Inpatient hospital services are provided at 153 medical centers and ambulatory care is provided in 986 clinics, of which 833 are community-based clinics. Contract fee care is provided for eligible Veterans when VA facilities are not geographically accessible, services are not available, or when services cannot be provided in a timely manner. A map showing the 21 VISNs is provided below.

Figure 3-1: VHA VISN Map

Action Plan Strategy

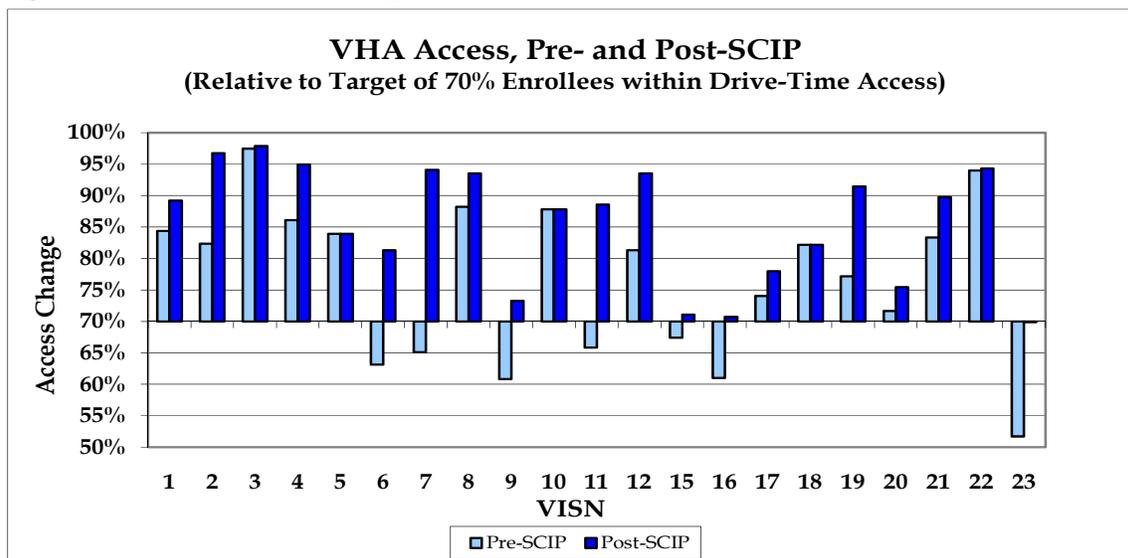

VHA’s 10-year Action Plan strategy addresses the access, utilization, space, and condition gaps, and addresses energy requirements currently-identified in the SCIP process. A combination of capital and non-capital solutions, such as telehealth, purchased care and extended hours of operations, are utilized to close currently-identified gaps. The access gap is closed by projects that provide additional points of care, typically as community-based outpatient clinics. The utilization gap is closed by adding or repurposing space to accommodate each required service. The space gap is met by building additional space or by disposing of or demolishing space where space is in excess. Condition gaps are closed by projects that address deficiencies in buildings rated “D” or “F” in the Facility Condition Assessment. Each VISN Action Plan also addresses energy gaps through medical facilities projects which will increase water and energy efficiency and meet VA’s goals in those areas.

VHA Gaps

Access gap: Is defined as the number or percentage of enrollees living within 30 minutes drive-time to the nearest primary care facility in urban and suburban areas and 60 minutes drive-time in rural areas. Corporate Target: 70%

The following chart illustrates the current Access gap by VISN with respect to the corporate target of 70% of enrollees living within drive-time guidelines (2008 data plus the addition of previously funded or 2011 approved or in-process facilities). As the chart demonstrates, the seven VISNs currently not meeting VA’s target of 70% access will meet this goal by 2021 through the implementation of all projects identified by the SCIP process in the 10-Year Action Plan. These VISNs are in the primarily in the Southeast (VISNs 6, 7 and 9) and Midwest (VISNs 11, 15, 16 and 23). Further data is provided in the individual VISN sections in this chapter.

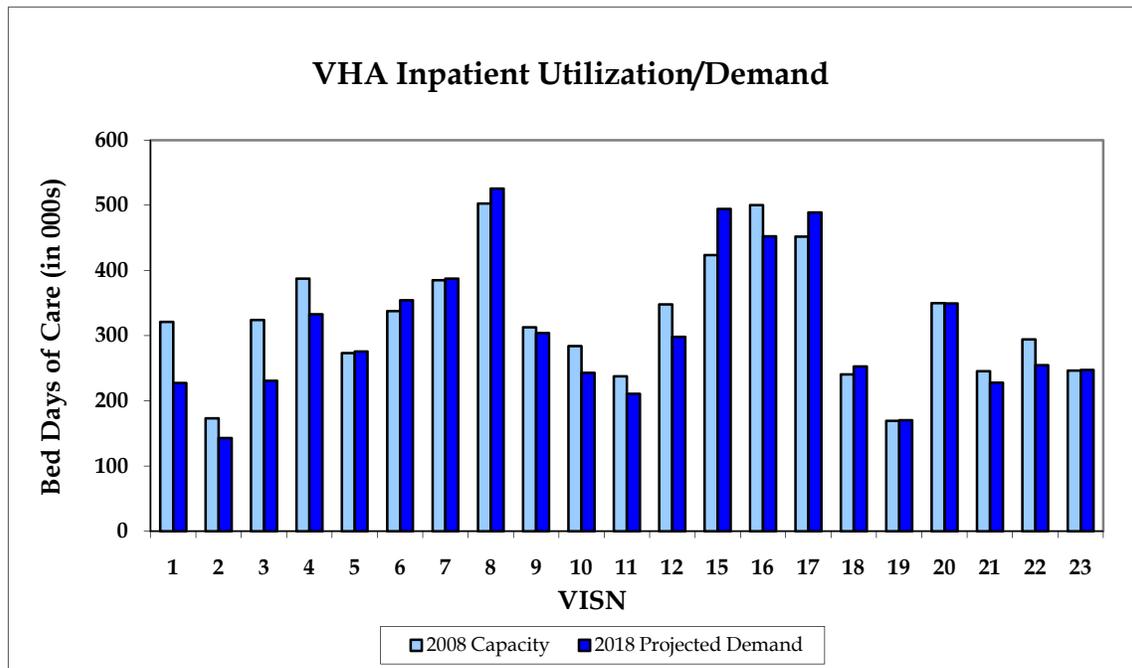

Figure 3-2: VHA Access Gap

Utilization Gap: The utilization gap is calculated for both inpatient and outpatient care. Inpatient utilization is calculated using Bed Days of Care (BDOC), which is defined as the number of occupied beds multiplied by the number of days they were occupied. For example, 30 beds occupied for 30 days equals 900 BDOC. Outpatient utilization is calculated using Clinic stops which are defined by the number of unique encounters that are tracked for outpatient services. A corporate level goal that is expected to be addressed for each gap, as result of implementing the 10-Year Action Plan has been established. The Corporate Target is to close 95% of all VHA utilization gaps

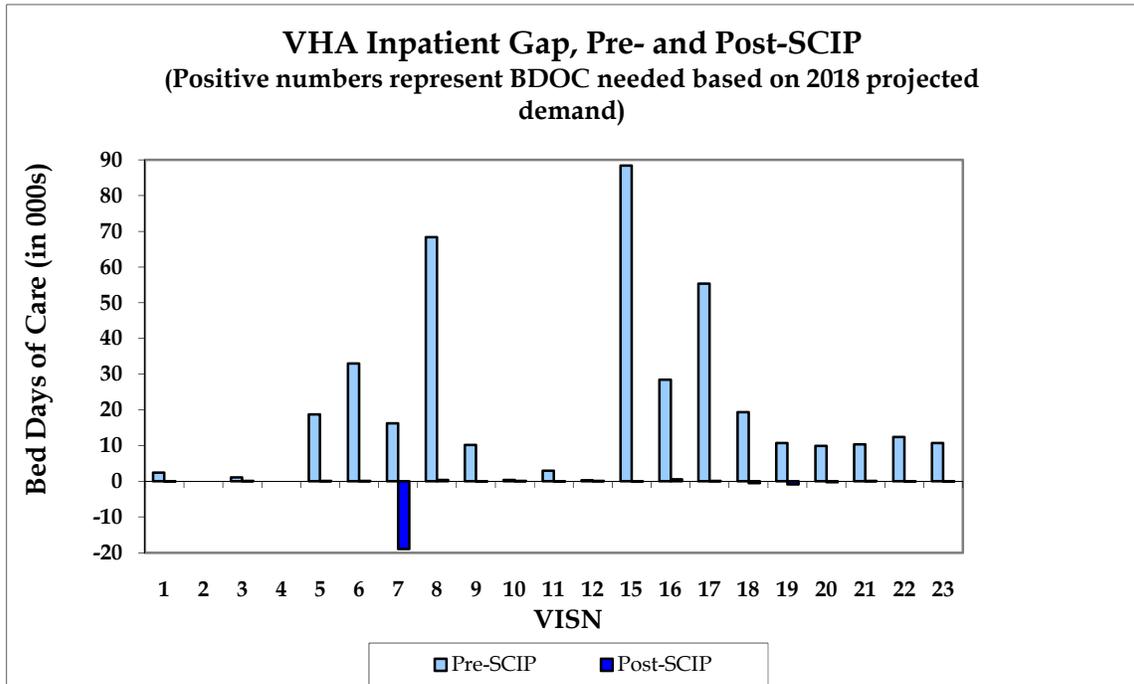

Inpatient Utilization - The figure below shows each VISN's current (2008) inpatient utilization and the projected demand for inpatient care in 2018.

Figure 3-3: VHA Inpatient Utilization/Demand

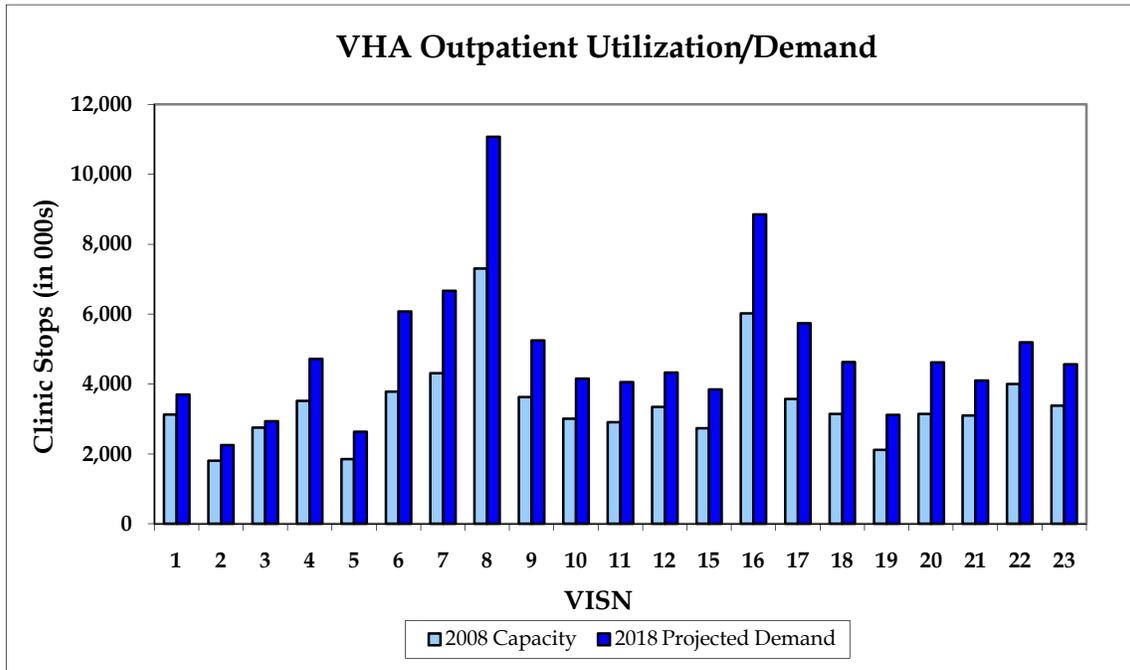

In accordance with national healthcare trends, VA is projected to see a general decrease in the demand for inpatient care over the next ten years. However, several VISNs will see an increased demand for inpatient care exceeding existing capacity, necessitating development of additional inpatient capacity. In addition, most VISNs are projected to see an increase in demand for at least a few types of inpatient care, such as mental health or other specialty services. The below figure illustrates gaps in inpatient care for services with projected growth and the effect that fully implementing the SCIP 10-year Action Plan will have on closing these gaps. Further data is provided in the individual VISN sections in this chapter.

Figure 3-4: VHA Inpatient Gap

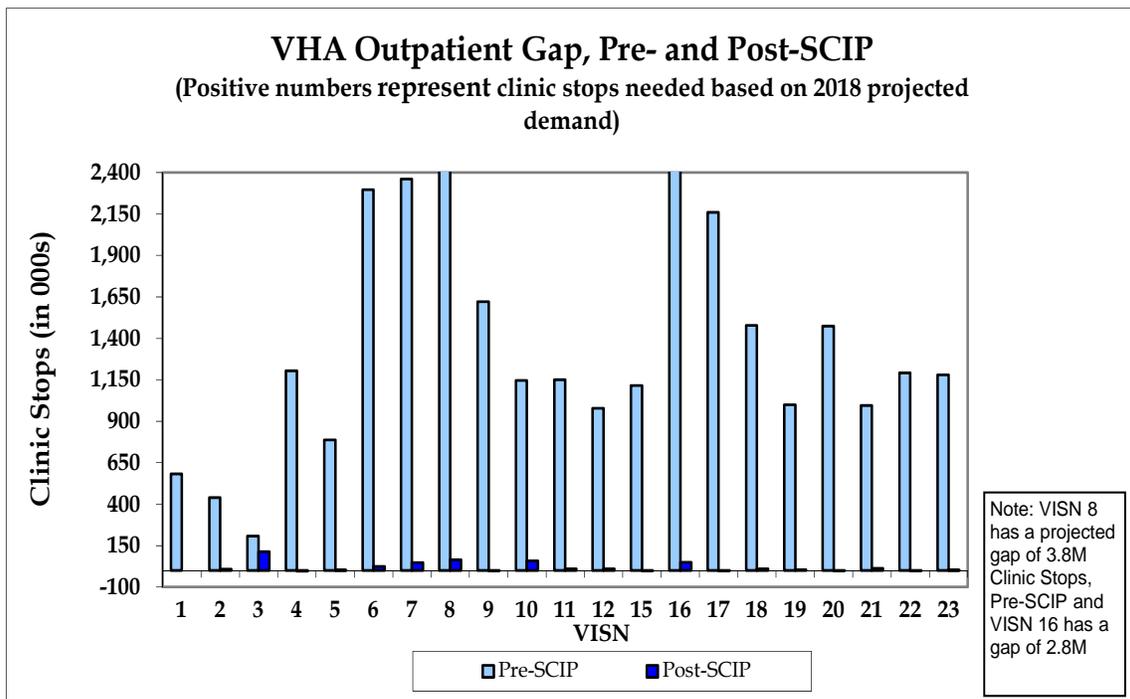

Outpatient Utilization- The figure below shows each VISN's current (2008) outpatient capacity and the projected demand for outpatient capacity in 2018. In accordance with national healthcare trends, the chart illustrates the expected increase in demand for outpatient services over the next 10 years. In order to meet expected demand, all VISNs must increase their capacity to provide outpatient services. The greatest need is in the South - from the Southeast (VISNs 6, 7 and 8), South Central (VISN 16) and the Southwest (VISNs 17 and 18). Further data is provided in the individual VISN sections in this chapter.

Figure 3-5: VHA Outpatient Utilization/Demand

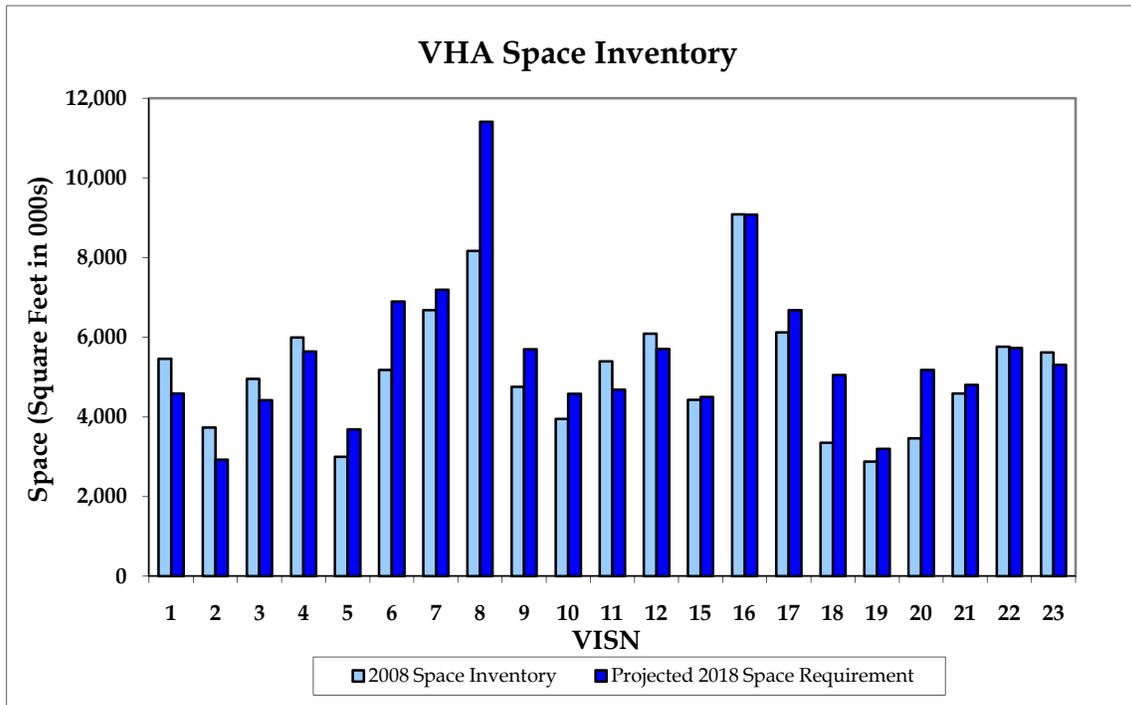

The following chart demonstrates the significant corrections to the outpatient utilization gaps that will occur by implementing all projects identified in the 10-Year Action plan as a result of the SCIP process.

Figure 3-6: VHA Outpatient Utilization Gap

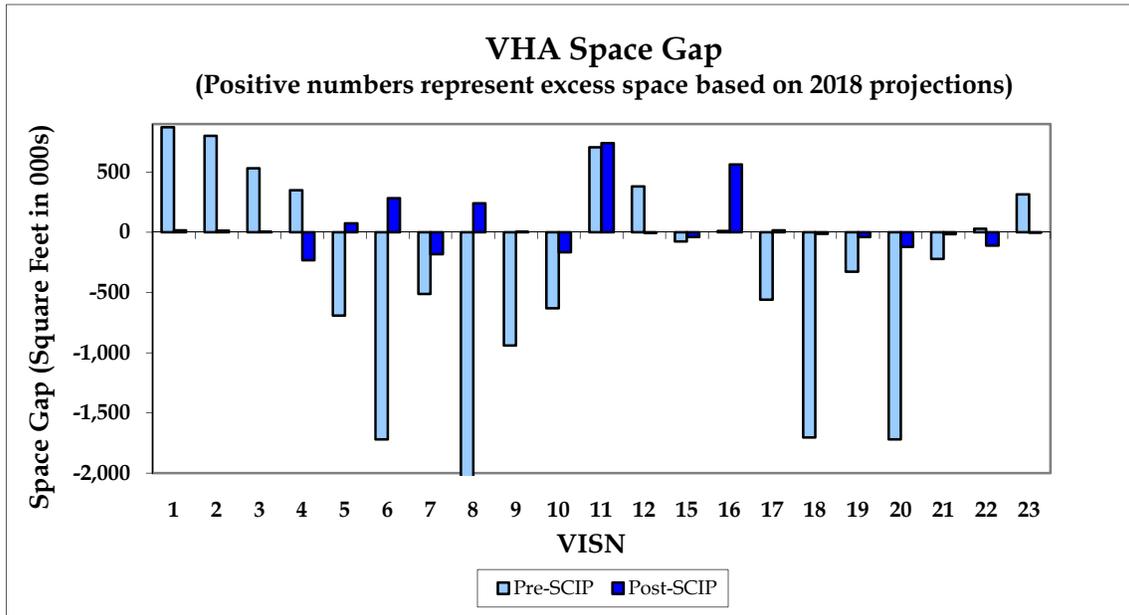

Space Gap: Defined as the difference between current available space, (includes adjustments for in-process and retiring space) and projected space 2018 needs, both positive and negative. Positive numbers indicate excess space, negative numbers indicated space deficit. As the following chart illustrates, there is excess space in the Northeast (VISNs 1 through 4) and upper Midwest (VISNs 11, 12 and 23) and space deficits in the Mid-Atlantic and Southeast (VISNs 5 through 10) and the West (VISNs 17 through 21). Further data is provided in the individual VISN sections in this chapter.

Figure 3-7: VHA Space Inventory

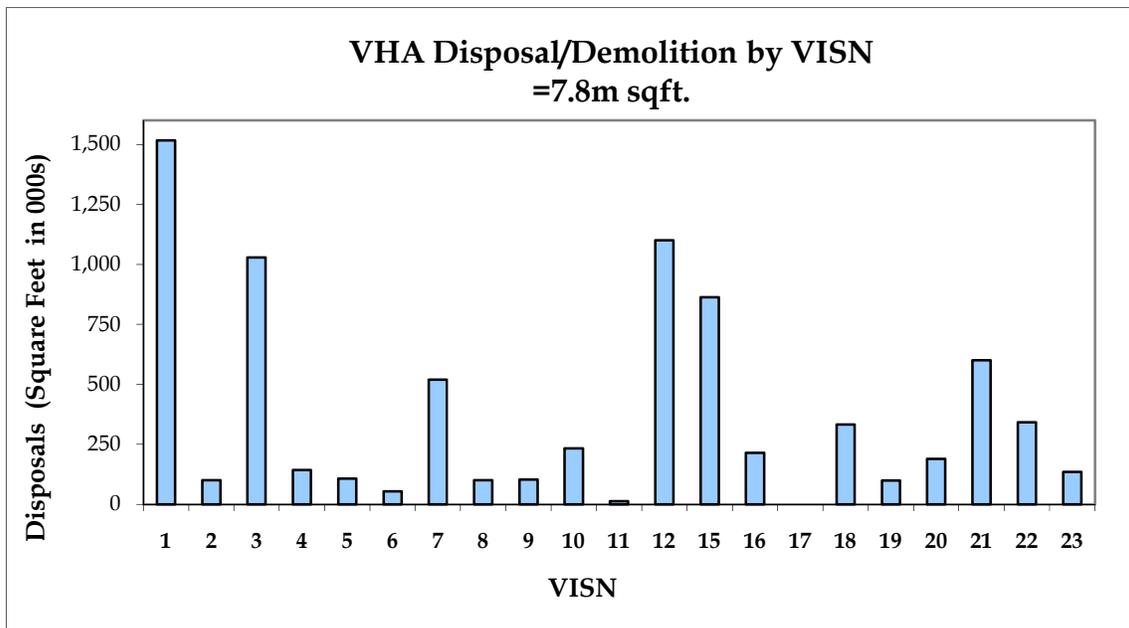

The following chart illustrates the correction of both positive and negative space gaps that would occur following implementation of all projects identified by the SCIP process in the 10-Year Action Plan.

Figure 3-8: VHA Space Gap

Disposal Goals: The ability to efficiently use space and remove obsolete space through outlease, demolition and disposal is critical to the capital planning process. VISN action plans incorporate demolition and disposal of space as a means of right-sizing excess inventory. Illustrated below is the total reduction in square footage due to disposal or demolition projects identified in each VISN's 10-Year Action Plan is

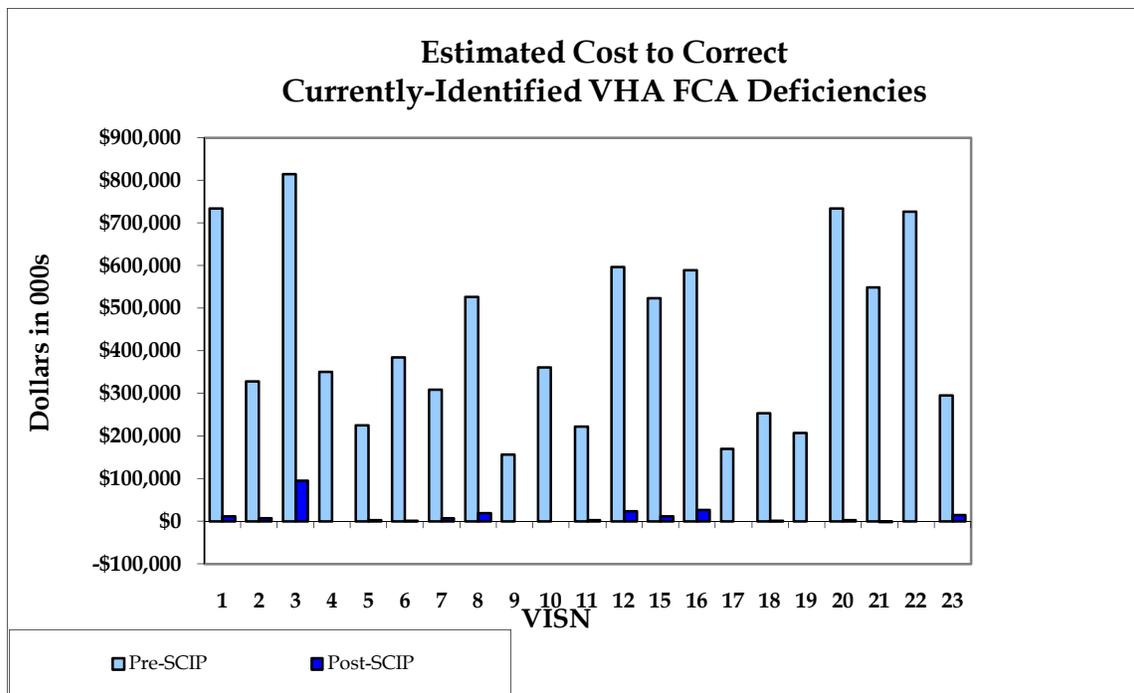

Figure 3-9: VHA Disposal/Demolition by VISN

Condition Gap: The condition gap is an estimate of dollars needed to correct currently-identified deficiencies in VHA facilities. Deficiencies were identified through on-site Facility Condition Assessments (FCA) and included those facility or infrastructure systems that were rated with either a D or F by the assessments.

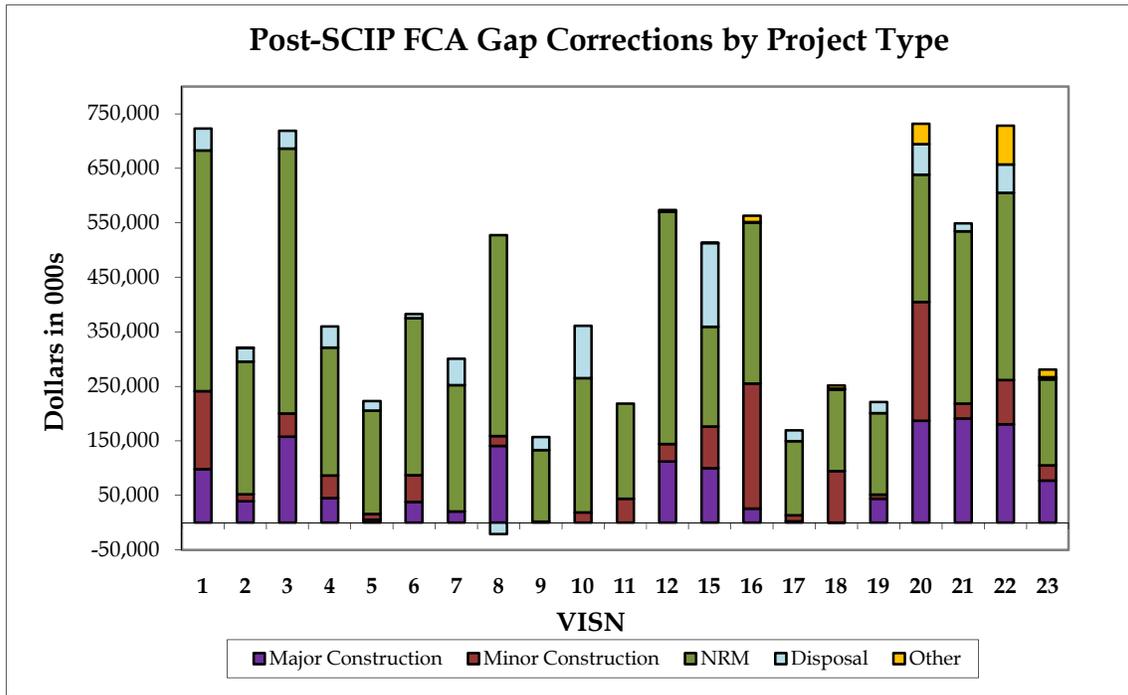

The following chart illustrates the existence of substantial condition deficiencies across all VISNs; however, those with the greatest number of identified FCA deficiencies are in the Northeast (VISN's 1 and 3) and the West (VISNs 20 and 22). Those VISNs with the fewest identified deficiencies are VISN 9, and the Texas and Rocky Mountain area (VISNs 17, 18 and 19). Further data is provided in the individual VISN sections in this chapter.

Figure 3-10: VHA Condition Gap

The following chart illustrates the breakdown of how the 10-Year Action Plan proposes to correct these identified FCA deficiencies by type of capital investment.

Figure 3-11: VHA Post-SCIP FCA Corrections by Project Type

SCIP Estimated 10-Year Magnitude Costs

Each VISN developed and submitted a separate action plan detailing its capital asset investment strategy to address identified gaps. Improving the condition of facilities and meeting increased outpatient demand were the predominate drivers of the VISN plans, comprising a large portion of the proposed capital projects and associated funding. Of these projects, maintaining and improving the condition of VA’s facilities through major construction (133 projects) accounted for the largest resource need, followed by medical facilities (NRM) projects (3,470 projects), and minor construction (569 projects), respectively. It is important to note that the magnitude estimates are based on a snap shot in time, using current market conditions, baseline capital portfolio, demographic data and projected needs. The costs provided will likely change as projects move through the investment process and as cost estimating and project requirements become more refined. For example, estimates are fine tuned from action plan to business case to project prospectus (for major construction) to final design and construction documents. The magnitude estimates do not include activation (start up) costs; however, VA is planning to develop a methodology to allow the Department to incorporate activation costs in future SCIP plans. Additionally, the SCIP action plan projects do not include life cycle costs in their estimates.

The cost to fully implement the 10-Year Action Plan and correct all currently-identified gaps for VHA is estimated to be between \$49 and \$60 billion. For VISN specific action plans, gap corrections, and complete project listings, see the individual VISN sections in this chapter.

Table 3-1: VHA 2012-2021 Capital Investment Projects by Type

VHA	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction ²	3	1467	130	15,042
Leases	61	703	153	1,935
Minor Construction	62	511	506	3,924
NRM	190	689	3,281	6,879
Other ³	-	-	169	590
Project Specific Subtotal		\$3,370		\$28,370
Out Year Planning (Minors and NRM) ⁴	N/A	N/A	-	15,482
Below Threshold/ Emergent Needs ⁵	TBD	229	-	2,597
Partially Funded Major Construction ⁶	7	450	16	4,403
Total	323	\$4,049	4,255	\$50,853

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²2012 cost reflects the TEC to complete major projects in Reno, West Los Angeles and San Francisco. The 2012 Budget requests \$94.7M to initiate these projects.

³Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

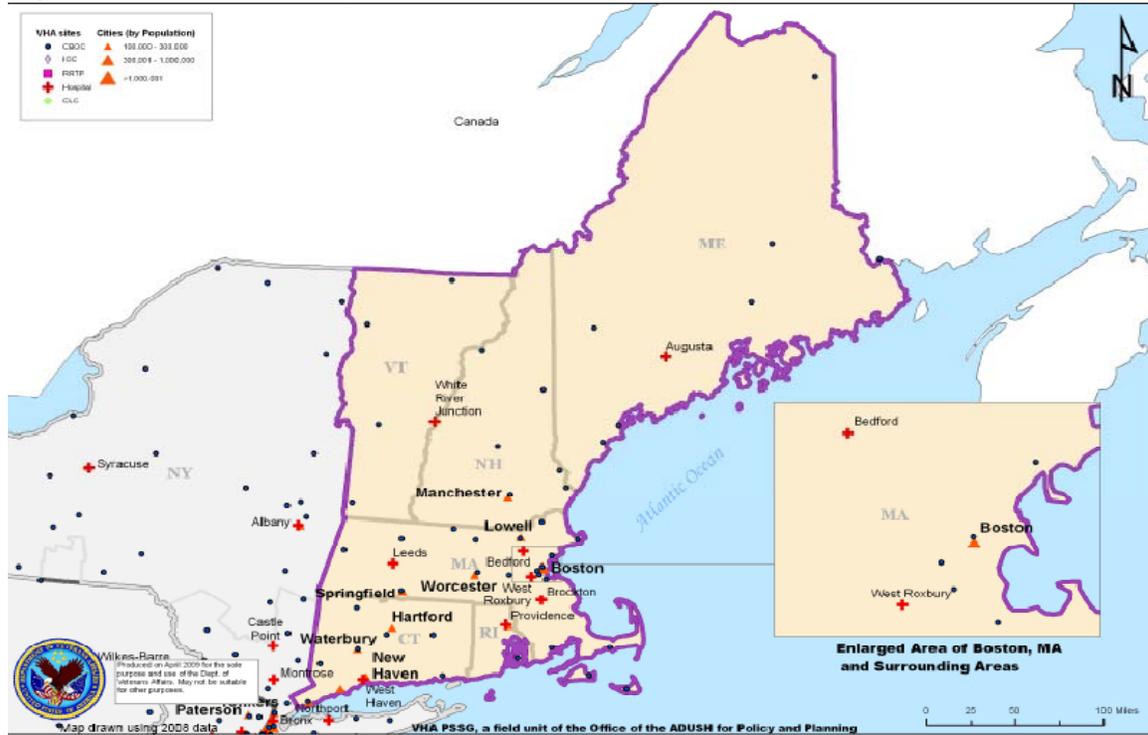

⁴Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁵The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRMs and that will be allocated during the year.

⁶This line reflects the 2012 Budget request to move forward on the seven partially-funded major construction projects. Any additional resources necessary to complete these projects are included in the 2013-2021 TEC total. Additional information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

Strategic Capital Investment Plan for VISN 1

Figure 3-12: VISN 1 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 1, are provided in the table below.

Table 3-2: VISN 1 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	8,339,790
Plus Active New Construction	178,853
Less Retired Space	(3,056,709)
Less Future Need	(4,589,207)
Equals Space Gap**	872,727 (excess square feet)

* "Retired Space" refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed.

Current Infrastructure Challenges Identified by VISN 1

- Aging buildings
- Antiquated building design
- Demographically inappropriate facility locations
- Misdistribution of space among medical centers
- Energy inefficiency

Table 3-3: VISN 1 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	87.8%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	2,389	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	582,136	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	872,727	Amount of excess square feet (2018)
Condition (current status)	\$734,395,062	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 1 is above the 70% outpatient primary care access guideline overall, but falls below 70% in its North market (66.8%). By 2021, VISN 1 will need to increase its inpatient capacity by 2,389 bed days of care (for select inpatient services), increase outpatient clinic stops by 582,136, reduce excess space by 872,727 square feet, and invest \$734,395,062 in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 1's 10-year action plan utilizes a mix of capital and non-capital solutions to close currently-identified access, utilization, space, condition, and parking gaps, and to address energy requirements.

VISN 1 has four markets with distinct needs and justifications for capital enhancements as well as a number of non-capital initiatives that should alleviate some of the projected gaps, especially the impending outpatient utilization gap, including telehealth, expansion of hours, home-based primary care and the adoption of new electronic and social networking technologies.

East Market

The East Market has substantial utilization, space and FCA deficiency gaps, but has no outpatient primary care access gap. VISN 1 plans on addressing these utilization, space, and FCA needs through several Major Construction projects and a number of follow-up Minor Construction projects.

Minor Construction and Non-recurring Maintenance (NRM) projects will be the primary method for addressing FCA deficiencies at all of the facilities across the East market. Minor Construction projects will also correct parking deficiencies at the West Roxbury and Brockton campuses. In 2012, the Providence VAMC will take possession of the Harwood US Army Reserve Center. This facility was made available to VA through the Department of Defense BRAC process. Providence VAMC has proposed that this new property be dedicated to providing a homeless facility to veterans, in response to the Secretary's call to eliminate homelessness among veterans. Minor Construction of new space and renovation of existing space will convert the existing US Army Reserve Center to a domiciliary care facility for homeless Veterans.

West Market

The West Market addresses utilization gaps by planning for services to be located in close proximity to the Veteran population and will focus on correcting current space, FCA, and utilization deficiencies.

North Market

The North Market addresses outpatient primary care access and FCA deficiency gaps. The access gap will be addressed by activation of community based outpatient clinics (CBOC) which will bring an additional 4,850 enrollees within the drive-time access guidelines for outpatient primary care; thereby increasing the percent of enrollees within access guidelines to 75%.

The Far North Market projects a gap in many outpatient primary care, mental health, and specialty services through 2018. VISN 1 plans to meet the gap challenges by increasing those various identified services at Togus as well as at the various CBOCs.

Energy

VISN 1 addresses Departmental energy goals through a \$186.3 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 1's plan proposes to further increase outpatient primary care access from its pre-SCIP state (87.8%) to 89.2% overall and bring all markets up to the 70% access threshold; increase its inpatient and outpatient care capacities to reflect the 2018 projected demand; reduce excess space by 98%; and eliminate 98% of its facility condition deficiencies.

Table 3-4: VISN 1 SCIP Implementation Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access*	87.8%	89.2%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization	2,389	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization	582,136	0	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	872,727	15,338	Amount of excess square feet (2018)
Condition	\$734,395,062	\$11,619,277	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 1 is estimated to be between \$3.7 and \$4.6 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-5: VISN 1 Capital Investment Projects by Type

VISN 1	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	10	1,845
Leases	2	5	2	29
Minor Construction	4	33	32	276
NRM	33	101	279	734
Other ²	-	-	3	1
Project Specific Subtotal		\$140		\$2,885
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	812
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	131
Partially Funded Major Construction ⁵	-	-	1	181
Total	39	\$140	327	\$4,009

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects that will be identified during execution of the 2012 program.

⁵Information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

VISN 1 2012 Total						\$134,785

* For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

*Non-recurring Maintenance projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-7 VISN 1 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	1	West Roxbury	MA	Lease	Lease New Worcester Outpatient Clinic	1,060
VHA	1	Boston	MA	Lease	Lease New Lowell Outpatient Clinic	4,051
					VISN 1 2012 Total Leases	5,111

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration’s and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as provided in the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 1 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 2

Figure 3-13: VISN 2 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and ideal

space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 2, are provided in the table below.

Table 3-9: VISN 2 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	4,800,381
Plus Active New Construction	263,385
Less Retired Space	(1,332,260)
Less Future Need	(2,928,863)
Equals Space Gap**	802,643 (excess square feet)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed.

Current Infrastructure Challenges Identified by VISN 2

- Increase in Veteran enrollees in the VISN
- Three VAMCs are eligible for inclusion on the National Registry of Historic Properties

Table 3-10: VISN 2 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	82.4%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	440,213	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	802,643	Amount of excess square feet (2018)
Condition (current status)	\$328,578,837	Estimated total cost to eliminate Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 2 is above the 70% outpatient primary care access guideline in all markets. By 2021, VISN 2 will need to increase outpatient clinic stops by 440,213, reduce excess space by 802,643 square feet, and invest \$328,578,837 in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 2's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space, and condition gaps, and to address energy requirements.

Outpatient primary care access guidelines are currently being exceeded in all market areas of VISN 2. The small pockets of access gaps that do exist are primarily in remote rural areas where workload would not support or justify establishment of a new community based outpatient clinic (CBOC). VISN 2 plans to address these localized access gaps using a variety of non-capital initiatives. These initiatives include an expansion of telehealth services, especially tele-mental health, at existing CBOCs, along with contracting for more fee basis services in remote areas. VISN 2 also plans to expand the Home Based Primary Care Program and Mental Health Outreach to additional rural areas, basing the teams at existing CBOC locations.

As the demand for most acute inpatient services is projected to decline in the next ten years, other functional gaps, such as privacy, will be addressed by reducing the number of inpatient beds and converting four bed patient rooms into one or two-bed rooms with private or semi-private baths. Some space freed up by the decline in the inpatient workload will also be converted to meet the increased demands for space for outpatient services.

Gaps in medical and other non-surgical specialties will be addressed through approved renovation and expansion of space for diverse services such as prosthetics, rehabilitation medicine, and women's health services. Renovations will expand clinic capacities in order to meet demand projections.

In order to meet the increasing demands for outpatient specialty services, clinic hours will be extended by using existing clinic space that was used during normal hours of operation. Additionally, use of clinic space will be monitored to reduce underutilization during the day.

Virtually all condition gaps would be addressed by pursuit of the construction projects identified in the 10-Year Action Plan.

Surplus space will be addressed through renovations that will consolidate functions and generate usable parcels of space that can be retrofitted for enhanced use leases or emerging needs.

Energy

VISN 2 addresses Departmental energy goals through a \$75.3 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 2's plan proposes to increase outpatient primary care access from its pre-SCIP state (82.4%) to 96.7% through the implementation of non-capital solutions; to increase outpatient care capacity to support the 2018 projected demand; to reduce excess space by 98%; and to eliminate 98% of FCA deficiencies.

Table 3-11: VISN 2 SCIP Implementation Gap Results

SCIP Gap Type	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access*	82.4%	96.7%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization	0	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization	440,213	8,203	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	802,643	13,107	Amount of excess square feet (2018)
Condition	\$328,578,837	\$7,311,030	Estimated total cost to eliminate Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 2 is approximately estimated to be between \$982 million and \$1.2 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-12: VISN 2 Capital Investment Projects by Type

VISN 2	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	1	94
Leases	1	39	0	0
Minor Construction	1	10	1	7
NRM	5	19	70	146
Other ²	-	-	12	7
Project Specific Subtotal		\$68		\$253
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	346
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	91
Partially Funded Major Construction ⁵	-	-	1	334
Total	7	\$68	85	\$1,024

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects that will be identified during execution of the 2012 program.

⁵Information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

**Table 3-13: VISN 2 2012 Above-Threshold* Potential Construction Projects
(Sorted by State, by City, by Investment Type)**

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	2	Albany	NY	NRM	Ward Renovations for Patient Privacy	4,405
VHA	2	Bath	NY	NRM	Renovate Building 34 for Accessibility and Privacy	2,681
VHA	2	Buffalo	NY	Minor Construction	Consolidate Surgical Program	9,944
VHA	2	Buffalo	NY	NRM	Renovate Ward 9C	7,678
VHA	2	Canandaigua	NY	NRM	Replace Piping in Crawl Space B37	1,030
VHA	2	Syracuse	NY	NRM	Renovate 7 West for Patient Ward	2,986
					VISN 2 2012 Total	\$28,723

* For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-14: VISN 2 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	2	Rochester ¹	NY	Lease	Replacement Community Based Outpatient Clinic - Rochester, NY	38,932
					VISN 2 2012 Total Leases	\$38,932

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserved rent for the loan period as provided in the SCIP Action Plan.

¹This Lease requires Congressional authorization; see Budget Chapter 6 VA Lease Notifications, Major Medical Facility Project & Lease Authorizations for a more detailed description

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 2 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Table 3-15: VISN 2 2013-2021 Above-Threshold Potential Projects (Sorted by State, by City, by Investment Type)

Strategic Capital Investment Plan for VISN 3

Figure 3-14: VISN 3 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and ideal

space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 3, are provided in the table below.

Table 3-16: VISN 3 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	9,282,270
Plus Active New Construction	145,181
Less Retired Space	(4,476,069)
Less Future Need	(4,419,828)
Equals Space Gap**	531,554 (excess square feet)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed.

Current Infrastructure Challenges Identified by VISN 3

- Several campuses are landlocked or face other space constraints
- Outdated and poor condition facilities
- Lack of adequate parking at many facilities

Table 3-17: VISN 3 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	97.9%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	1,052	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	206,271	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	531,556	Amount of excess square feet (2018)
Condition (current status)	\$814,304,636	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 3 is above the 70% outpatient primary care access guideline in all three markets. By 2021, VISN 3 will need to increase its inpatient capacity by 1,052 bed days of care, increase outpatient clinic stops by 206,271, reduce excess space by 531,556 square feet, and invest \$814,304,636 in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 3's 10-year Action Plan utilizes a mix capital and non-capital solutions to close the currently-identified utilization, space, and condition gaps, and to address energy requirements.

The Major Construction projects submitted in VISN 3's plan will create new, modern facilities needed to address outpatient primary care access, utilization, condition, and reduce maintenance and energy costs over the next 10 years. As the approval and development process for these projects is anticipated to take several years, the remainder of the plan is designed to allow facilities to remain fully functional and improve functional efficiencies within the existing buildings until the results of the Major Construction projects can be fully realized. The Department is also considering a no cost enhanced use lease (EUL) at St. Albans, New York which would include a Community Living Center, Outpatient Clinic, Laundry, Chapel, Domiciliary as well as other services in the years 2013 through 2021.

VISN 3 also seeks non-capital solutions to address the gaps identified by incorporating innovative measures to address the changing needs of the Veteran population. Through outreach efforts, community partnerships have been established to increase access to primary care services for homeless Veterans and those applying for benefits. Increased workload will be absorbed through expanded business hours and staffing, and tele-health technology is being incorporated into VAMCs and CBOCs to provide services to those who otherwise would not be able to access outpatient primary care services.

Energy

VISN 3 addresses Departmental energy goals through a \$180 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results:

VISN 3's plan proposes to maintain outpatient primary care at its pre-SCIP state (97.9%); increase inpatient care capacity to reflect 2018 projected demand; eliminate 44% of its outpatient care gap; eliminate excess inventory; and eliminate 88% of its facility condition deficiencies.

Table 3-18: VISN 3 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access*	97.9%	97.9%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization	1,052	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization	206,271	114,858	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	531,556	0	Amount of excess square feet (2018)
Condition	\$814,304,636	\$95,680,014	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 3 is estimated to be between \$2.4 and \$2.9 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-19: VISN 3 Capital Investment Projects by Type

VISN 3	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	10	1,021
Leases	1	1	0	0
Minor Construction	0	-	9	83
NRM	6	23	194	537
Other ²	-	-	7	8
Project Specific Subtotal		\$24		\$1,650
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	631
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	159
Partially Funded Major Construction ⁵	-	-	1	218
Total	7	\$24	221	\$2,657

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects that will be identified during execution of the 2012 program.

⁵Information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

Table 3-20: VISN 3 2012 Above-Threshold* Potential Construction Projects (Sorted by State, by City, by Investment Type)

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	3	East Orange	NJ	NRM	Improve Outpatient Environment	1,980
VHA	3	Brooklyn	NY	NRM	Correct Space Deficiencies in GI-RME	2,722
VHA	3	Manhattan	NY	NRM	Patient Ward Renovation Phases 1,2, & 3	7,201
VHA	3	Northport	NY	NRM	Update Exterior Lighting	2,365
VHA	3	Brooklyn	NY	NRM	Women Health Clinic Renovation	1,320
VHA	3	Manhattan	NY	NRM	Renovation of Patient Wards	6,978
VISN 3 2012 Total						\$22,566

* For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-21: VISN 3 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	3	East Orange	NJ	Lease	Replace Brick Clinic Space	1,410
VISN 3 2012 Lease Total						\$1,410

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as provided in the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 3 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 4

Figure 3-15: VISN 4 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA

Enrollee Health Care Projection Model. The comparison of available and ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 4, are provided in the table below.

Table 3-23: VISN 4 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	8,418,665
Plus Active New Construction	589,883
Less Retired Space	(3,013,743)
Less Future Need	(5,645,839)
Equals Space Gap**	348,966 (excess square feet)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed.

Current Infrastructure Challenges Identified by VISN 4

- Issues with space functionality and proximity to related services
- Aging and outdated infrastructure
- Significant retro-commissioning needed to meet current energy standards

Table 3-24: VISN 4 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	90.3%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,204,111	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	348,969	Amount of excess square feet (2018)
Condition (current status)	\$349,901,378	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 4 is above the 70% outpatient primary care access guideline in both markets. By 2021, VISN 4 will need to increase outpatient clinic stops by 1,204,111, reduce excess space by 348,969 square feet, and invest \$349,901,378 in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 4's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space, and condition gaps, and to address energy requirements.

VISN 4's outpatient primary care access enhancements focus on increasing market penetration to serve more Veterans and to expand the spectrum of services offered in all locations through capital solutions at the VAMCs and community based outpatient clinics (CBOC). In the western market, which has the lower percentage of Veterans meeting primary care drive-time standards, the strategy will include an effort to find geographic "pockets" of underserved Veterans and implement non-capital solutions to add primary care access points to areas with more than 1,000 Veterans living beyond 30 minutes from existing facilities and CBOCs.

Utilization gaps will be closed through capital and non-capital solutions to increase outpatient services. Capital solutions for decreasing the inpatient capability in existing infrastructure will focus on re-purposing vacated areas for outpatient services and ancillary services as well as selective demolition. Some areas will also be renovated to improve privacy and safety, which will mean that units can accommodate fewer beds.

Additionally, use of non-traditional hours of care will be explored to reduce the need for additional infrastructure while allowing for more episodes of care to be accomplished. This initiative will also provide a needed venue for those like many Operating Enduring Freedom/Operation Iraqi Freedom (OEF/OIF) Veterans who prefer services during times outside of normal administrative hours.

Some infrastructure issues relate less to the amount of space required and more to the appropriateness of space for its function and the adjacency of needed services. VISN 4's space gaps are resolved with the completion of this plan.

Significant resources have been expended on existing infrastructure systems in VISN 4 over the past decade and little space is identified as below threshold or "poor space." The challenge going forward will be to sustain this level of maintenance as the buildings continue to age and requirements for modern healthcare continue to change.

Energy

VISN 4 addresses Departmental energy goals through a \$134 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 4's plan proposes to further increase outpatient primary care access from its pre-SCIP state (90.3%) to 95%, primarily through adoption of non-capital solutions; increase its outpatient care capacity to reflect the 2018 projected demand; reduce excess space by 166%, which is made possible through innovative solutions to reduce infrastructure while still maintaining necessary workload capacity; and eliminate its facility condition deficiencies.

Table 3-25: VISN 4 SCIP Implemental Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access*	90.3%	91.6%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization	0	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization	1,204,111	0	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	348,969	(231,221)	Amount of excess square feet (2018)
Condition	\$359,918,875	\$0	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 4 is between \$3 and \$3.6 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-26: VISN 4 Capital Investment Projects by Type

VISN 4	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	4	1,070
Leases	1	0.47	2	72
Minor Construction	8	59	28	224
NRM	15	54	235	458
Other ²	-	-	20	29
Project Specific Subtotal		\$114		\$1,853

Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	109
Partially Funded Major Construction ⁵	-	-	-	0
Total	24	\$114	289	\$3,201

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects that will be identified during execution of the 2012 program.

⁵Information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

**Table 3-27: VISN 4 2012 Above-Threshold* Potential Construction Projects
(Sorted by State, by City, by Investment Type)**

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	4	Wilmington	DE	Minor Construction	Construct New Medical Center Entrances (Community Living Center AND SW7)	5,992
VHA	4	Wilmington	DE	Minor Construction	Domiciliary and Behavioral Health Building - Demolish Outbuildings	9,800
VHA	4	Wilmington	DE	NRM	Renovate 5 West	6,543
VHA	4	Wilmington	DE	NRM	Renovate 8 West	6,050
VHA	4	Altoona	PA	Minor Construction	Expand and Improve Behavioral Health clinic	9,794
VHA	4	Altoona	PA	NRM	Repair Asphalt Paving and Concrete	2,639
VHA	4	Altoona	PA	NRM	Install Emergency Power	3,300
VHA	4	Altoona	PA	NRM	Add/Replace Mechanical Systems in Operating Room Suites	2,750
VHA	4	Coatesville	PA	NRM	Imaging Suite Building #3	4,400
VHA	4	Coatesville	PA	NRM	Construct Lab & Med Suites Building #3	4,470
VHA	4	Erie	PA	Minor Construction	Community Living Center Improvements Phase 1	9,557
VHA	4	Erie	PA	Minor Construction	Construct Parking Garage	8,500
VHA	4	Lebanon	PA	Minor Construction	Construct New Transitional Rehab House	1,778
VHA	4	Lebanon	PA	NRM	Water Tower Upgrades	1,001
VHA	4	Philadelphia	PA	Minor Construction	Reconstruct Main Entrance Building 1	3,668
VHA	4	Philadelphia	PA	NRM	Boiler Conversion	2,750
VHA	4	Philadelphia	PA	NRM	Women's Imaging Center	1,628
VHA	4	Philadelphia	PA	NRM	Rekey Medical Center	2,200
VHA	4	Wilkes-Barre	PA	Minor Construction	Replace Community Living Center Phase I	9,722
VHA	4	Wilkes-Barre	PA	NRM	Replace Water Tank	2,508
VHA	4	Wilkes-Barre	PA	NRM	Emergency Room Expansion	3,098
VHA	4	Wilkes-Barre	PA	NRM	Expand existing Oncology for SPU/GI/Pain Management	4,445
VHA	4	Clarksburg	WV	NRM	4A Mental Health	6,600
					VISN 4 2012 Total	\$113,193

* For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

*Non-recurring Maintenance projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-28: VISN 4 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	4	Pittsburg	PA	Lease	Community Based Care Office Space	470
VISN 2 2012 Lease Total						\$470

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as provided in the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 4 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Table 3-29: VISN 4 2013-2021 Above-Threshold Potential Projects (Sorted by State, by City, by Investment Type)

Strategic Capital Investment Plan for VISN 5

Figure 3-16: VISN 5 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 5, are provided in the table below.

Table 3-30: VISN 5 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	3,933,372
Plus Active New Construction	297,081
Less Retired Space	(1,235,978)
Less Future Need	(3,685,451)
Equals Space Gap**	(690,976) (square feet needed)

* "Retired Space" refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed

Current Infrastructure Challenges Identified by VISN 5

- Aging and outdated infrastructure
- Compact campuses provide little swing-space for larger construction projects
- Historic properties

Table 3-31: VISN 5 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	83.9%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	18,713	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	786,611	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(690,978)	Amount of needed square feet (2018)
Condition (current status)	\$225,313,997	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction facilities.

** The space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 5 is above the 70% access guideline for outpatient primary care guidelines in all three markets. By 2021, VISN 5 needs to increase its inpatient capacity by 18,713 bed days of care, increase outpatient clinic stops by 786,611, increase its space inventory by 690,978 square feet, and invest \$225,313,997 in its facilities to correct the FCA deficiencies.

Action Plan Strategy

VISN 5's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space and condition gaps, and to address energy requirements.

VISN 5's 10-Year Action Plan includes a range of capital projects designed to address space gaps to account for projected workload growth and provide more Veteran-centered care. The Plan also addresses a shortage of over 337,000 square feet in non-clinical space, which includes Research space at several large VAMCs. Functional and condition deficiencies will be addressed through Minor Construction and the Non-recurring Maintenance (NRM) program for inpatient, outpatient specialty care, and support programs.

Additionally, the VISN is pursuing efficiencies through systems redesign, process re-engineering, creative scheduling of staff and patients, and sharing options with the Department of Defense for clinical services. VISN 5 is expanding capacity in several areas located in rural areas using new telemedicine approaches for physical therapy, mental health, retinal exams and dermatology.

Energy

VISN 5 addresses Departmental energy goals through a \$44.4 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 5's plan proposes to maintain outpatient primary care access at its pre-SCIP state of 83.9%; increase its inpatient and outpatient care capacities to reflect the 2018 projected demand; eliminate its space deficit; and eliminate 99% of its FCA deficiencies.

Table 3-32: VISN 5 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access*	83.9%	83.9%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization	18,713	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization	786,611	10	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(690,978)	0	Amount of needed square feet (2018)
Condition	\$225,313,997	\$2,369,301	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) access data plus the addition of approved and active new construction.

**Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 5 is estimated to be between \$1.4 and \$1.8 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-33: VISN 5 Capital Investment Projects by Type

VISN 5	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	2	111
Leases	4	25	5	300
Minor Construction	1	7	28	229
NRM	6	18	158	232
Other ²	-	-	8	48
Project Specific Subtotal		\$51		\$920
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	447
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	95
Partially Funded Major Construction ⁵	-	-	1	81
Total	11	\$51	202	\$1,544

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects and that will be identified during execution of the 2012 program.

⁵Information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

Table 3-34: VISN 5 2012 Above-Threshold* Potential Construction Projects (Sorted by State, by City, by Investment Type)

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	5	Washington	DC	NRM	Renovate Public Restrooms-Phase I	2,749
VHA	5	Washington	DC	NRM	Research Building - Heating, Ventilation and Air Conditioning Upgrades	1,650
VHA	5	Martinsburg	WV	Minor Construction	Women's Wellness Center	7,498

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	5	Martinsburg	WV	NRM	Mental Health Domiciliary Building 502 Interior Renovations Ph.1	3,685
VHA	5	Martinsburg	WV	NRM	Heating, Ventilation, and Air Condition & Window Renovations (ph. 2)	4,607
VHA	5	Martinsburg	WV	NRM	Building Access System	1,100
VHA	5	Martinsburg	WV	NRM	Community Living Center Cultural Transformation to Renovate 5A Phase 2	4,307
VISN 5 2012 Total						\$25,596

*For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance (NRM) projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-35: VISN 5 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	5	Washington	DC	Lease	Community Resource Center	8.4
VHA	5	Washington	DC	Lease	Community Based Outpatient Clinic-Relocate Charlotte Hall	6,260
VHA	5	Washington	DC	Lease	Community Based Outpatient Clinic-St. Mary's County, MD	5,600
VHA	5	Martinsburg	WV	Lease	Establish Harrisonburg Community-Based Outpatient Clinic	4,752
VISN 5 2012 Total Leases						\$25,012

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as given the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 5 2013 - 2021 Cost Estimate Range

does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 6

Figure 3-17: VISN 6 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and

ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 6, are provided in the table below.

Table 3-37: VISN 6 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	6,768,054
Plus Active New Construction	1,012,584
Less Retired Space	(2,604,199)
Less Future Need	(6,895,094)
Equals Space Gap**	(1,718,655) (square feet needed)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed

Current Infrastructure Challenges Identified by VISN 6

- Frequent risk of water related natural disasters at the Hampton medical center
- Aging and outdated facilities
- Several campuses are landlocked or face other space constraints

Table 3-38: VISN 6 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	73.1%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	33,012	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	2,295,849	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(1,718,656)	Amount of needed square feet (2018)
Condition (current status)	\$384,652,272	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access is calculated using the current (2008) primary care access data plus the addition of approved and active new construction facilities.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 6 is above the 70% access guideline for outpatient primary care overall but below 70% in its Southeast market (65.7%). By 2021, VISN 6 needs to increase its inpatient capacity by 33,012 bed days of care, increase outpatient clinic stops by 2,295,849, increase space inventory by 1,718,656 square feet, and invest \$384,652,272 million in its facilities to correct the FCA deficiencies.

Action Plan Strategy

VISN 6's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space, and condition gaps, and to address energy requirements.

Some acute inpatient services are projected to decline by 2018. These negative gaps are reflected in the Space gap as square feet needed and will be addressed by converting inpatient beds into outpatient space. The rest of the space need will be alleviated by making some 4-bed rooms into private rooms.

Capital projects encompass a combination of Major Construction, Minor Construction, and Non-recurring Maintenance projects. Within these capital programs, the projects entail new construction, renovation of existing space, leases, structural improvements to shore up existing sites against natural disasters, and demolition of properties no longer usable. Solutions also include leases to address multiple access, utilization and space gaps on a large scale and several VA staffed community based outpatient clinics (CBOC) to address outpatient primary care access gaps throughout the network.

Non-capital initiatives comprise a significant component of the gap solutions. These include the Home Based Primary Care (HBPC) program in all new CBOCs, telehealth programs, and rural health program along with increased efficiencies and utilization of current facilities.

Energy

VISN 6 addresses Departmental energy goals through a \$98.6 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 6's plan proposes to increase access to outpatient primary care from its pre-SCIP state (73.1%) to 81.3%, bringing all markets above the 70% access target; increase its inpatient and outpatient care capacities to reflect the 2018 projected demand; eliminate its space deficit; and eliminate 99.5% of its condition backlog.

Table 3-39: VISN 6 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access*	73.1%	81.3%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization	33,012	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization	2,295,849	24,029	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(1,718,655)	0	Amount of needed square feet (2018)
Condition	\$384,652,272	\$1,872,000	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access is calculated using the current (2008) access data plus the addition of approved and active new construction facilities.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 6 is estimated to be between \$1.8 and \$2.2 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-40: VISN 6 Capital Investment Projects by Type

VISN 6	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	7	501
Leases	-	-	2	33
Minor Construction	-	-	45	308
NRM	13	51	261	459
Other ²	-	-	0	0
Project Specific Subtotal		\$51		\$1,300
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	556
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	60
Partially Funded Major Construction ⁵	-	-	-	0
Total	13	\$51	315	\$1,917

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects and that will be identified during execution of the 2012 program.

⁵Information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

Table 3-41: VISN 6 2012 Above-Threshold* Potential Construction Projects (Sorted by State, by City, by Investment Type)

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	6	Asheville	NC	NRM	Add Water Tower	1,100

VHA	6	Salem	VA	NRM	Upgrade Water Dist.	3,190
VHA	6	Beckley	WV	NRM	Renovate Imaging and MRI Addition	3,250
VISN 6 2012 Total						\$51,141

*For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance (NRM) projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 6 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 7

Figure 3-18: VISN 7 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and

ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 7, are provided in the table below.

Table 3-43: VISN 7 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	8,681,953
Plus Active New Construction	617,529
Less Retired Space	(2,619,294)
Less Future Need	(7,193,206)
Equals Space Gap**	(513,018) (square feet needed)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed

Current Infrastructure Challenges Identified by VISN 7

- Rapidly rising demand for services
- Need for increased research space
- Several campuses face space constraints or are landlocked

Table 3-44: VISN 7 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	92.8%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	16,211	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	2,360,672	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(513,017)	Amount of needed square feet (2018)
Condition (current status)	\$308,337,985	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access is calculated using the current (2008) primary care access data plus the addition of approved and active new construction facilities.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 7 is above the 70% access guideline for outpatient primary care in all three markets. By 2021, VISN 7 will need to increase its inpatient capacity by 16,211 bed days of care, increase outpatient clinic stops by 2,360,672, increase space inventory by 513,017 square feet, and invest \$308,337,985 in its facilities to correct the FCA deficiencies.

Action Plan Strategy

VISN 7's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space, and condition gaps, and to address energy requirements.

The space gap is partially addressed by repurposing space in bed towers – moving non-inpatient functions out and renovating the space with the Non-recurring Maintenance (NRM) program.

Projected 2018 ambulatory care growth in all three markets exceeds 50% in most planning categories. This growth results in large space deficits and the need to decompress most tertiary care facilities along with opening new and expanded community based outpatient clinics (CBOC). Expansion of existing CBOCs, planned new CBOCs, and decompression of existing facilities with annex space will be managed through the leasing program concurrent with expansions to the footprint at the parent facilities via Minor and Major Construction projects. As the ambulatory care solutions are accomplished, opportunities to address non-clinical space gaps will be managed with the use of backfill space and off-site leases.

The condition gap is closed through planned corrections with NRM solutions. Strategies will include combining various deficiencies into larger projects to address the critical deficiencies in a more timely fashion with an added contracting efficiency benefit. Energy goals and targets will also be met through the NRM program. Safety, Security, and information technology needs are components of most projects regardless of the gap. Projected Research space needs were identified at Charleston and Atlanta and will be addressed with Major Construction projects. Research condition deficiencies are assumed to be part of the overall FCA correction gaps mitigated in the Action Plan.

Energy

VISN 7 addresses Departmental energy goals through a \$141.6 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 7's plan proposes to slightly increase outpatient primary care access from its pre-SCIP state (92.8%) to 94.1%; increase its inpatient care capacity to meet the projected 2018 demand; correct 98% of its outpatient cap; reduce its space deficit by 64.7%; and eliminate 97.5% of its FCA deficiencies.

Table 3-45: VISN 7 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access (current status)*	92.8%	94.1%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	16,211	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	2,360,672	48,440	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(513,017)	(181,017)	Amount of needed square feet (2018)
Condition (current status)	\$303,872,466	\$7,628,806	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access is calculated using the current (2008) access data plus the addition of approved and active new construction facilities.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 7 is estimated to be between \$1.8 and \$2.2 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-46: VISN 7 Capital Investment Projects by Type

VISN 7	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	5	220
Leases	3	25	6	167
Minor Construction	-	-	19	140
NRM	16	70	276	587
Other ²	-	-	4	11
Project Specific Subtotal		\$95		\$1,124
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	734
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	87
Partially Funded Major Construction ⁵	-	-	-	-
Total	19	\$95	310	\$1,945

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects and that will be identified during execution of the 2012 program.

⁵Information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

Table 3-47: VISN 7 2012 Above-Threshold* Potential Construction Projects (Sorted by State, by City, by Investment Type)

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	7	Birmingham	AL	NRM	ER Urgent Care Improvements	1,238
VHA	7	Montgomery	AL	NRM	Renovate Urgent Care/Radiology/Nuclear Med/Prosthetics	3,001
VHA	7	Montgomery	AL	NRM	Renovate B3A-4	3,000
VHA	7	Tuscaloosa	AL	NRM	Correct Deficiencies, B39	6,160
VHA	7	Tuscaloosa	AL	NRM	Correct Deficiencies, B33	7,864

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	7	Atlanta	GA	NRM	Renovate Fort McPherson Phase II	8,527
VHA	7	Augusta	GA	NRM	Renovate Mental Health Wards A2	6,000
VHA	7	Augusta	GA	NRM	Security Enhancements	4,000
VHA	7	Augusta	GA	NRM	Renovate Laboratory Area	4,000
VHA	7	Dublin	GA	NRM	Renovate 11B for Surgery Suite	4,155
VHA	7	Dublin	GA	NRM	Renovate B34 to Outpatient Mental Health	7,964
VHA	7	Charleston	SC	NRM	Add Operating Room #6	4,399
VHA	7	Charleston	SC	NRM	Renovate Front Lobby	1,001
VHA	7	Charleston	SC	NRM	Install 1000 Ton Chiller	3,960
VHA	7	Charleston	SC	NRM	Replace Fire & Alarm System	1,324
VHA	7	Charleston	SC	NRM	Correct Induction Unit 5BS	3,301
					VISN 7 2012 Total	\$69,894

*For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance (NRM) projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-48: VISN 7 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	7	Birmingham	AL	Lease	Acute Inpatient Mental Health Lease	5,390
VHA	7	Columbus	AL	Lease	Expand Community-Based Outpatient Clinic	18,800
VHA	7	Augusta	GA	Lease	Establish Off-Site Clinic for Women Veterans	900
					VISN 7 2012 Lease Total	25,090

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as given the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 7 2013 - 2021 Cost Estimate Range

does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Table 3-49: VISN 7 2013-2021 Above-Threshold Potential Projects (Sorted by State, by City, by Investment Type)

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost (\$000s)

Strategic Capital Investment Plan for VISN 8

Figure 3-18: VISN 8 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and

ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 8, are provided in the table below.

Table 3-50: VISN 8 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	8,575,178
Plus Active New Construction	2,555,192
Less Retired Space	(2,965,793)
Less Future Need	(11,406,018)
Equals Space Gap**	(3,241,441) (square feet needed)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed

Current Infrastructure Challenges Identified by VISN 8

- Several campuses face space constraints or are landlocked
- Changing Veteran demographics require shifts from inpatient to outpatient care facilities
- Located in a geographic area prone to hurricane, flood, and seismic activity
- Historic properties

Table 3-51: VISN 8 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	93.4%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	68,325	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	3,807,773	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(3,241,441)	Amount of needed square feet (2018)
Condition (current status)	\$526,004,892	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access is calculated using the current (2008) primary care access data plus the addition of approved and active new construction facilities.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 8 is above the 70% access guideline for outpatient primary care in all 7 markets. By 2021, VISN 8 needs to increase its inpatient capacity by 68,325 bed days of care, increase outpatient clinic stops by 3,807,773, increase space inventory by 3,241,441 square feet, and invest \$526,004,892 in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 8's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space, and condition gaps, and to address energy requirements.

Through decompression plans, care will be provided closer to Veterans by effectively utilizing leases, construction and renovation. Currently, VISN 8 has active Major Construction at all but one of its facilities and has Major Leases planned or approved in the Central, North, Miami, and Puerto Rico markets. Minor Construction projects addressing access, space and condition gaps will be initiated in six of the VISN's seven markets.

Energy goals will be met with a mix of Non-recurring Maintenance (NRM) projects and Energy Saving Performance Contracts (ESPC). Additionally, through the Site Review Initiative (SRI), the VISN has identified acreage for homeless Enhanced-Use Leasing projects at vacant/underutilized locations.

The VISN is utilizing non-capital solutions, such as expansion of clinic hours, reduction in missed opportunities, improvement in process efficiencies, implementation of Medical Home Model, telehealth and the use of emerging technologies.

Energy

VISN 8 addresses Departmental energy goals through a \$133.3 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 8's plan proposes to further increase access to outpatient primary care from its pre-SCIP state (93.4%) to 93.5% through the implementation of non-capital solutions; increase its inpatient and outpatient care capacities to reflect the 2018 projected demand; eliminate its space deficit; and eliminate 96.3% of its condition FCA deficiencies.

Table 3-52: VISN 8 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access (current status)*	93.4%	93.5%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	68,325	406	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	3,807,773	65,155	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(3,241,441)	0	Amount of needed square feet (2018)
Condition (current status)	\$526,004,892	\$19,037,985	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access is calculated using the current (2008) access data plus the addition of approved and active new construction facilities.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 8 is estimated to be between \$2.5 and \$3.0 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-53: VISN 8 Capital Investment Projects by Type

VISN 8	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	13	1,042
Leases	1	12	13	449
Minor Construction	2	11	24	208
NRM	5	26	94	198
Other ²	-	-	12	57
Project Specific Subtotal		\$49		\$1,954
Out Year Planning (Minors and NRM) ³	N/A	N/A		384
Below Threshold/ Emergent Needs ⁴	TBD	TBD		167
Partially Funded Major Construction ⁵	2	145	-	22
Total	10	\$193	156	\$2,527

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects and that will be identified during execution of the 2012 program.

⁵This line reflects the 2012 Budget request to move forward on two partially-funded major construction projects. Any additional resources necessary to complete these projects are included in the 2013-2021 TEC total. Additional information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

Table 3-54: VISN 8 2012 Above-Threshold* Potential Construction Projects (Sorted by State, by City, by Investment Type)

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	8	Bay Pines	FL	NRM	Renovate Patient Wards B-100, 3C & 4A	8,806
VHA	8	Bay Pines	FL	NRM	Renovate Community Living Center Phase II (Eden Concept)	5,445
VHA	8	Gainesville	FL	Minor Construction	Additional Psychiatric Ward	2,100

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	8	Gainesville	FL	NRM	Replace Exterior Windows B-1, Ph 2	1,455
VHA	8	Orlando	FL	Minor Construction	Research Phase I	9,088
VHA	8	San Juan	PR	NRM	Integrated Waste Management Center	3,520
VHA	8	San Juan	PR	NRM	Emergency Expansion and Chest Pain Center	6,654
VISN 8 2012 Total						37,068

*For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance (NRM) projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-55: VISN 8 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	8	Tampa	FL	Lease	New Residential Rehabilitation Treatment Program Facility	11,529
VISN 8 2012 Total Leases						\$11,529

* Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

** Lease costs represent build out costs plus the annual unserviced rent for the loan period as given the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 8 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 9

Figure 3-20: VISN 9 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and

ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 9, are provided in the table below.

Table 3-57: VISN 9 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	6,366,391
Plus Active New Construction	961,185
Less Retired Space	(2,573,293)
Less Future Need	(5,694,856)
Equals Space Gap**	(940,573) (square feet needed)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed

Current Infrastructure Challenges Identified by VISN 9

- Lack of available swing space at several facilities
- Several VMAC campuses are landlocked
- Historic properties
- Several clinics lie on a major seismic fault zone

Table 3-58: VISN 9 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	65.8%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	10,214	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,620,639	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(940,573)	Amount of needed square feet (2018)
Condition (current status)	\$156,476,702	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access is calculated using the current (2008) primary care access data plus the addition of approved and active new construction facilities.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 9 is below the 70% access guideline for outpatient primary care overall and in three out of its four markets. By 2021, VISN 9 needs to increase its inpatient capacity by 10,214 bed days of care, increase outpatient clinic stops by 1,620,639, increase space inventory by 940,573 square feet, and invest \$156,476,702 in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 9's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space, and condition gaps, and to address energy requirements.

A large portion of the veteran population within VISN 9 resides in rural areas, many miles from the nearest VA facility. To properly serve these patients, solutions for contracting with local Primary Care providers and expanding or establishing Community Based Outpatient Clinics (CBOC) have been included for rural areas.

Much of the current capital assets within VISN 9 are not capable of absorbing the workload growth projected for 2018. Virtually, all of VISN 9's facilities are deficient in space. Major and Minor Construction solutions are included to add space to accommodate workload growth as well as improve privacy and comfort within the existing environment of care. Many of the existing buildings are 1920's and/or 1930's vintage and have significant infrastructure issues. Numerous Non-recurring Maintenance (NRM) solutions are planned for elimination of FCA deficiencies, as well as to improve the energy efficiency of the buildings and systems.

Energy

VISN 9 addresses Departmental energy goals through a \$103.8 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 9's plan proposes to increase access to outpatient primary care from its pre-SCIP state (65.9%) to 73.3% and bring all markets above the 70% access threshold; increase its inpatient and outpatient care capacities to reflect the 2018 projected demand; reduce its space deficit by 100%; and eliminate 100% of its FCA deficiencies.

Table 3-59: VISN 9 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access (current status)*	65.8%	73.3%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	10,214	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,620,639	0	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(940,573)	0	Amount of needed square feet (2018)
Condition (current status)	\$156,476,702	0	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access is calculated using the current (2008) access data plus the addition of approved and active new construction facilities.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 9 is estimated to be between \$2.1 and \$2.6 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-60: VISN 9 Capital Investment Projects by Type

VISN 9	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	12	1,300
Leases	3	50	5	41
Minor Construction	-	-	6	49
NRM	10	30	142	312
Other ²	-	-	4	1
Project Specific Subtotal		\$81		\$1,703
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	540
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	80
Partially Funded Major Construction ⁵	-	-	1	TBD
Total	13	\$81	170	\$2,323

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$183 million for NRM that will be allocated during the year.

⁵Information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

**Table 3-61: VISN 9 2012 Above-Threshold* Potential Construction Projects
(Sorted by State, by City, by Investment Type)**

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	9	Lexington	KY	NRM	Renovate Portions of Buildings 12 and 17 for Supply, Processing, and Distribution	3,850
VHA	9	Louisville	KY	NRM	Renovate Research, Building 19	2,821
VHA	9	Memphis	TN	NRM	Upgrade Controls and Energy Management System	5,192
VHA	9	Memphis	TN	NRM	Renovate Ground Fl Research	2,090
VHA	9	Memphis	TN	NRM	Upgrade Fire Sprinkler Protection	1,607
VHA	9	Memphis	TN	NRM	Mitigate Security Risks	2,531
VHA	9	Murfreesboro	TN	NRM	Pave Parking Lot and Accessibility Improvements	1,500
VHA	9	Murfreesboro	TN	NRM	Abate Asbestos PH 1	1,600
VHA	9	Huntington	WV	NRM	Replace Centrifugal Chillers	2,750
VHA	9	Huntington	WV	NRM	Renovate BRAC Property	6,336
VISN 9 2012 Total						\$30,277

*For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance (NRM) projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-62: VISN 9 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	9	Louisville	KY	Lease	Administrative Lease	3,756
VHA	9	Louisville	KY	Lease	Expand DuPont Community-Based Outpatient Clinic	44,531
VHA	9	Memphis	TN	Lease	Community Resource and Referral Center	2,078
VISN 9 2012 Total						\$50,365

* Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

** Lease costs represent build out costs plus the annual unserviced rent for the loan period as given the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 9 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 10

Figure 3-21: VISN 10 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and

ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 10, are provided in the table below.

Table 3-64: VISN 10 Space Needs

Space Analysis	Gross Square Feet
Total Current Available Space	4,989,710
Plus Active New Construction	495,973
Less Retired Space	(1,533,296)
Less Future Need	(4,583,055)
Equals Space Gap**	(630,668) (square feed needed)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed.

Current Infrastructure Challenges Identified by VISN 10

- Several facilities are landlocked
- Historic properties

Table 3-65: VISN 10 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	87.8%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	383	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,147,108	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(630,667)	Amount of needed square feet (2018)
Condition (current status)	\$361,193,237	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 10 is above the 70% access to outpatient primary care guideline in all three markets. By 2021, VISN 10 will need to increase its inpatient capacity by 383 bed days of care, increase outpatient clinic stops by 1,147,108, increase space inventory by 630,667 square feet, and invest \$361,193,237 in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 10's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space, and condition gaps, and to address energy requirements.

Strategies will be deployed that maintain and increase outpatient primary care access and market penetration to target enrollees outside the travel guidelines by assessing the need for more access points particularly in the rural counties of Ohio and increasing use of mobile health clinics.

VISN 10 has a small utilization gap for inpatient Residential Rehabilitation Mental Health Programs that will be addressed by the Central Market (Chillicothe). There has been much stakeholder attention given to local inpatient access in the Central market (Columbus). This is currently being addressed through inter-facility transfer, fee-based, and/or contract services. VISN 10's plan proposes moving towards a full-service Ambulatory Care model with construction of a 23-hour short stay/observation bed addition at the Columbus VA Ambulatory Care Center.

Key capital solutions to address utilization gaps include the expansion of selected existing community based outpatient clinic (CBOC) leases, which will increase capacity for Primary Care, some Medical Specialty Care (Optometry, Podiatry), Mental Health, and Laboratory/Pathology services (ancillary testing expansion at CBOCs). This will also increase space for Primary Care Medical Home (PCMH) model implementation.

VISN 10 has an overall space need of 630,668 square feet. This space shortage is concentrated at three facilities with two facilities having a combined surplus of space totaling 329,450 square feet. Currently, the Cleveland VAMC is working towards consolidation of operations at the Wade Park Division and the disposal of the Brecksville campus through an Enhanced Use Lease (EUL). This project includes a significant expansion at Wade Park and a new Outpatient Clinic in Parma, Ohio. The VISN 10 SCIP plan proposes to close approximately 70% of the space gap, with a re-evaluation of space needs to be done after the consolidation is complete. Cleveland, Cincinnati, and Columbus have proposed capital solutions to meet the identified space needs through a combination of new construction and leasing.

Chillicothe and Dayton present unique challenges in managing the surplus space with both sites being older campus style facilities with historic significance as well as functional layouts not conducive to modern medical care models. Both facilities plan to manage this surplus space through consolidation of functions, and EUL.

VISN 10 facilities, with the exception of Columbus have reached or exceeded the expected lifecycle and are in need of significant infrastructure corrections and improvements. With seventy-five percent of the costs related to architectural and mechanical systems, VISN 10 has proposed an aggressive approach to corrections through the use of Non-recurring Maintenance (NRM) projects.

VISN 10 has been forward-looking in approaches to meet the VA energy goals of improving operational efficiencies, reducing energy usage, and complying with all energy requirements. This approach has included a combination of methods such as projects to replace old and outdated technology, monitoring usage, installation of energy management systems, negotiating reduced utility rates, and retro-commissioning. These projects, in combination with previously funded and/or approved NRM projects, along with the disposal of the Brecksville campus are projected to close the energy efficiency gap for VISN 10. Upon activation of the current on-going efforts, VISN 10 will review and adjust the Energy Plan accordingly.

Energy

VISN 10 addresses Departmental energy goals through a \$51.7 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 10's plans to maintain outpatient primary care access at its pre-SCIP state of 87.8%; increase its inpatient and outpatient care capacities to reflect the 2018 projected demand (98% and 95%, respectively); reduce its space deficit by 74%; and eliminate 100% of its FCA deficiencies.

Table 3-66: VISN 10 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access (current status)*	87.8%	87.8%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	383	8	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,147,108	58,148	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(630,667)	(165,987)	Amount of needed square feet (2018)
Condition (current status)	\$361,193,237	\$0	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 10 is estimated to be between \$1.2 and \$1.5 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-67: VISN 10 Capital Investment Projects by Type

VISN 10	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	1	120
Leases	4	21	12	42
Minor Construction	5	45	14	114
NRM	6	13	80	205
Other ²	-	-	1	0
Project Specific Subtotal		\$79		\$481
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	615
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	138
Partially Funded Major Construction ⁵	-	-	-	0
Total	15	\$79	108	\$1,234

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects and that will be identified during execution of the 2012 program.

⁵Information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

Table 3-68: VISN 10 2012 Above-Threshold* Potential Construction Projects (Sorted by State, by City, by Investment Type)

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	10	Chillicothe	OH	Minor Construction	Consolidate Supply Processing and Distribution & Material Management ,Building 31	9,445
VHA	10	Chillicothe	OH	Minor Construction	Relocate Laboratory & Prosthetics to Building 31	9,405
VHA	10	Cincinnati	OH	Minor Construction	Relocate Community Living Center Phase IV	8,534

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	10	Cincinnati	OH	Minor Construction	Replace Animal Research Facility PH III	8,908
VHA	10	Columbus	OH	Minor Construction	Construct Specialty Care Addition	9,000
VHA	10	Chillicothe	OH	NRM	Replace/Add Emergency Generators	1,869
VHA	10	Cincinnati	OH	NRM	Install Additional Chiller and Replace Cooling Towers	2,901
VHA	10	Cleveland	OH	NRM	Renovate Mental Health Clinic	1,699
VHA	10	Cleveland	OH	NRM	Renovate Research North	3,119
VHA	10	Cleveland	OH	NRM	Medical Administration File Room Renovation/Conversion	1,899
VHA	10	Columbus	OH	NRM	Expand Clinical Space, 4th Floor	1,606
					VISN 10 2012 Total	\$58,387

*For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance (NRM) projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-69: VISN 10 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost (\$000s)**
VHA	10	Columbus	OH	Lease	Lease of Admin Space	6,040
VHA	10	Cincinnati	OH	Lease	Establish Georgetown Community Based Outpatient Clinic	276
VHA	10	Painesville	OH	Lease	Expand Community Based Outpatient Clinic - Painesville	9,420
VHA	10	Sandusky	OH	Lease	Expand Sandusky Community-Based Outpatient Clinic	5,336
					VISN 10 2012 Total Leases	\$21,072

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as provided in the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 10 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 11

Figure 3-22: VISN 11 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and

ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 11, are provided in the table below.

Table 3-71: VISN 11 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	7,781,561
Plus Active New Construction	247,907
Less Retired Space	(2,636,815)
Less Future Need	(4,687,059)
Equals Space Gap**	705,594 (excess square feet)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed.

Current Infrastructure Challenges Identified by VISN 11

- Many facilities are landlocked
- Historic properties
- At some facilities, a dispersed campus layouts make continuation of care difficult

Table 3-72: VISN 11 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	85.8%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	2,987	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,150,365	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	705,594	Amount of excess square feet (2018)
Condition (current status)	\$221,952,669	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 11 is above the 70% access to outpatient primary care guideline in all three markets. By 2021, VISN 11 needs to increase its inpatient capacity by 2,987 bed days of care, increase outpatient clinic stops by 1,150,365, and invest \$221,952,669 in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 11's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space, and condition gaps, and to address energy requirements.

VISN 11's plan expands the VISN community based outpatient clinic (CBOC) system which focuses on the expansion of outpatient primary care services to Veterans in rural areas. In addition to expansion of access to outpatient primary care, the VISN 11 SCIP plan also addresses access to acute care, specifically in the Central Illinois market where access measures 53%, the lowest in the VISN. The plan also addresses female veterans in the form of capital improvements to enhance privacy and gender specific clinics and expertise. Homeless Veterans in the VISN are also part of this plan and included are projects for the expansion of VISN 11 domiciliary facilities.

VISN 11 recognizes that the physical plant must be expanded in order to accomplish the major elements in this plan and also that the existing plant must be maintained and repaired to provide a safe and secure environment for patients, visitors, employees, and volunteers. The VISN is committed to closing the condition gap through the elimination of D and F deficiencies identified on the facility condition assessment (FCA) review. Additionally, through a mix of Major and Minor Construction, VISN 11 plans to expand the ambulatory care and surgery suite to meet the increasing workload being experienced now and projected for VAMC Indianapolis

Energy

VISN 11 addresses Departmental energy goals through a \$64.4 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 11's plan proposes to increase outpatient primary care access from its pre-SCIP state (85.8%) to 88.6% through a combination of capital and non-capital solutions; increase its inpatient and outpatient care capacities to reflect the 2018 projected demand (100% and 99% gap reduction, respectively); and eliminate 98.5% of its FCA deficiencies.

Table 3-73: VISN 11 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access (current status)*	85.8%	88.6%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	2,987	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,150,365	9,410	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	705,594	741,131 ¹	Amount of excess square feet (2018)
Condition (current status)	\$221,952,669	\$3,338,409	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

¹ Detroit campus consists of a single building that is larger than necessary for projected workload. Due to layout, there are no readily available reuse or disposal opportunities, resulting in "excess" space in SCIP.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 11 is estimated to be between \$885 and \$723 million. This range is an estimate only; costs may change as projects are further refined.

Table 3-74: VISN 11 Capital Investment Projects by Type

VISN 11	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	2	40
Leases	3	170	27	87
Minor Construction	-	-	17	99
NRM	5	16	111	123
Other ²	-	-	11	12
Project Specific Subtotal		\$186		\$360
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	315
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	129
Partially Funded Major Construction ⁵	-	-	-	0
Total	8	\$186	168	\$804

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects and that will be identified during execution of the 2012 program.

⁵Information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

**Table 3-75: VISN 11 2012 Above-Threshold* Potential Construction Projects
(Sorted by State, by City, by Investment Type)**

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	11	Marion	IN	NRM	Replace Boiler	7,500
VHA	11	Saginaw	MI	NRM	Domestic Water Replacement and Sanitary Building 1	2,050
VHA	11	Saginaw	MI	NRM	Renovate Toilet Rooms for Handicap Access Building 1,2,3,4	2,740
VHA	11	Saginaw	MI	NRM	Sprinkler and Standpipes	1,106
VHA	11	Saginaw	MI	NRM	Upgrade Surgery Heating, Ventilation and Air Conditioning System	2,241
					VISN 11 2012 Total	\$15,636

*For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance (NRM) projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-76: VISN 11 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	11	South Bend ¹	IN	Lease	Lease Health Care Center - South Bend, IN	82,038
VHA	11	Fort Wayne ¹	IN	Lease	Lease Health Care Center - Fort Wayne, IN	80,845
VHA	11	Traverse City	MI	Lease	Traverse City, MI Community Based Outpatient Clinic Lease	7,296
					VISN 11 2012 Total Leases	\$170,179

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as provided in the SCIP Action Plan.

¹This Lease requires Congressional authorization; see Budget Chapter 6 VA Lease Notifications, Major Medical Facility Project & Lease Authorizations for a more detailed description.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 11 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 12

Figure 3-23: VISN 12 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and

ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 12, are provided in the table below.

Table 3-78: VISN 12 Space Needs

Space Analysis	Gross Square Feet
Total Current Available Space	8,546,511
Plus Active New Construction	325,041
Less Retired Space	(2,784,756)
Less Future Need	(5,704,390)
Equals Space Gap**	382,406 (excess square feet)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed.

Current Infrastructure Challenges Identified by VISN 12

- Several facilities are landlocked
- Large proportion of properties are designated historic
- Expansions to IT infrastructure needed to fully implement telehealth initiatives

Table 3-79: VISN 12 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	81.3%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	288	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	979,142	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	382,406	Amount of excess square feet (2018)
Condition (current status)	\$569,353,173	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 12 is above the 70% access to outpatient primary care guideline overall, but falls below 70% in its Northern market (48.2% access). By 2021, VISN 12 needs to increase its inpatient capacity by 288 bed days of care, increase outpatient clinic stops by 979,142, reduce excess space by 382,406 square feet, and invest \$569,353,173 in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 12's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space, and condition gaps, and to address energy requirements.

VISN 12's 10-Year Action Plan addresses the gaps existing for the seven medical centers that are located within the three healthcare markets that comprise the VISN. Of the three markets, the Northern market is projected to have a gap in access to outpatient primary care services going forward.

The outpatient primary care access gap in the Northern market will be addressed through an ambulatory care expansion project at Iron Mountain. Although there is no geographical access gap in the central and southern markets, access to care will be enhanced through non-capital alternatives to include purchased care and expansion of tele-health modalities.

Ambulatory care gaps in utilization exist across all three healthcare markets in VISN 12. Through the use of new construction, renovation projects and leasing, VISN 12 will eliminate the projected gaps by 2018. Strategic initiatives are expected to improve market penetration and may shift workload between markets.

The space and condition gaps identified in VISN 12 will be addressed through targeted use of Minor Construction, NRM and Leasing. Disposal of buildings that are beyond their architectural and functional life is also an essential component of reducing the gap in VISN 12. VISN 12 will take advantage of the Building Utilization Review and Reuse (BURR) program by being one of first VISNs to undergo this process and by using the information derived from this assessment to guide the efforts in considering the extent to which aging and vacant buildings will be reused for clinical or administrative purposes. These deficiencies will be addressed through capital initiatives with less reliance on Major Construction projects to enhance flexibility and funding opportunities.

VISN 12 capital plan development is greatly influenced by the fact that of the 248 buildings in its Capital Asset Inventory, 66 buildings are considered to be historic and are located on four of the largest campuses in the VISN. As a result, any modernization or new construction activities to be undertaken at these sites are

subject to the Section 106 process as required by the National Historic Preservation Act of 1966. This requirement places significant restrictions on what capital improvements can be accomplished economically and timely.

Energy

VISN 12 addresses Departmental energy goals through a \$76.9 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 12's plan proposes to increase outpatient primary care access from its pre-SCIP state (81.3%) to 93.5% and bring all markets above the 70% guideline, primarily through the implementation of non-capital solutions; increase its inpatient and outpatient care capacities to reflect the 2018 projected demand (99% of each gap corrected); eliminate excess space; and eliminate 96% of its FCA deficiencies.

Table 3-80: VISN 12 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access (current status)*	81.3%	93.5%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	288	3	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	979,142	10,364	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	382,406	0	Amount of excess square feet (2018)
Condition (current status)	\$569,353,173	\$22,853,176	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 12 is estimated to be between \$2.4 and \$2.9 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-81: VISN 12 Capital Investment Projects by Type

VISN 12	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	6	810
Leases	3	12	11	17
Minor Construction	-	-	23	161
NRM	17	83	124	402
Other ²	-	-	16	304
Project Specific Subtotal		\$95		\$1,694
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	750
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	128
Partially Funded Major Construction ⁵	-	-	-	0
Total	20	\$95	180	\$2,572

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects and that will be identified during execution of the 2012 program.

⁵Information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

**Table 3-82: VISN 12 2012 Above-Threshold* Potential Construction Projects
(Sorted by State, by City, by Investment Type)**

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	12	Chicago	IL	NRM	Relocate IRM Offices & Computer Equip to 7N	6,600
VHA	12	Chicago	IL	NRM	Replace Electrical Panels	1,671
VHA	12	Chicago	IL	NRM	Replace Clothwire in Building.1,11A,11B-Phase 1 &2	1,320
VHA	12	Chicago	IL	NRM	Relocate Cardiology and Waiting Area-5th floor	4,659
VHA	12	Hines	IL	NRM	Install Standby Power for Animal Research, Building 1	6,050
VHA	12	North Chicago	IL	NRM	Renovate Kitchen - Building 6	5,500
VHA	12	North Chicago	IL	NRM	Renovate Building 4 for Education and Caregiver Center	5,775
VHA	12	Iron Mountain	MI	NRM	Expand Mental Health 3-Center	1,604

VHA	12	Madison	WI	NRM	Renovate Radiology	1,517
VHA	12	Milwaukee	WI	NRM	Renovate Research, Phase 1	9,918
VHA	12	Milwaukee	WI	NRM	Correct Fire Safety & Emergency System in Building 41	8,131
VHA	12	Milwaukee	WI	NRM	DVA Van and South Entrance Canopy	2,559
VHA	12	Tomah	WI	NRM	Renovate 2nd and 3rd Floors of Building 402	9,504
VHA	12	Tomah	WI	NRM	Renovate 2nd and 3rd Floors of Building 406	8,712
					VISN 12 2012 Total	\$83,471

*For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance (NRM) projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-83: VISN 12 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	12	North Chicago	IL	Lease	Expand McHenry Community-Based Outpatient Clinic	5,415
VHA	12	Iron Mountain	MI	Lease	Establish Rural Outreach Clinic	736
VHA	12	Madison	WI	Lease	Women Veterans Center Lease	5,724
VISN 12 2012 Total Leases						\$11,875

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as provided in the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 12 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 15

Figure 3-24: VISN 15 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and

ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 15, are provided in the table below.

Table 3-85: VISN 15 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	5,905,943
Plus Active New Construction	824,128
Less Retired Space	(2,304,921)
Less Future Need	(4,501,978)
Equals Space Gap**	(76,828) (square feet needed)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed.

Current Infrastructure Challenges Identified by VISN 15

- Several facilities are landlocked
- Historical properties
- Lack of swing space limits number of construction projects that can be undertaken in a given year
- Portions of the Network lie in flood plains or seismic zones

Table 3-86: VISN 15 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	70.3%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	88,409	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,114,554	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(76,825)	Amount of needed square feet (2018)
Condition (current status)	\$523,739,677	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 15 is above the 70% access to outpatient primary care guidelines overall but below 70% in its West market (63.0%). By 2021, VISN 15 needs to increase its inpatient capacity by 88,409 bed days of care, increase outpatient clinic stops by 1,114,554, increase space inventory by 76,825 square feet, and invest \$523,739,677 in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 15's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space, and condition gaps, and to address energy requirements.

The defined gaps are addressed primarily through the use of Leases, Minor Construction, and Non-recurring Maintenance (NRM) projects. Through a combination of these solutions, new space will be created to address space, utilization, and access gaps, and by shifting functions within existing space, the optimum functional adjacencies can be obtained.

To close the outpatient primary care access gap, construction and leasing projects are planned allowing coordination of care, and installation of the Patient Centered Medical Home model. The VISN will use a combination of NRM projects, new leases, telemedicine, and telework to make progress toward closing the defined gaps.

New construction, leasing and remodeling/augmenting the existing space will allow facilities to expand and contract according to the demand, thereby closing the utilization gap. There is a push for more outpatient care, but facilities need to provide inpatient care and will therefore need to be flexible with capital assets. Multiple projects over time provide that flexibility.

VISN 15 continues to have space shortages and plans to build and remodel, demolish and replace, lease space, or fee to address the space gap. Several buildings throughout the VISN have been identified for disposal, due to the degradation of the facility condition. Expansion of current/additional clinics will not eliminate the space gaps completely but will require additional space to ensure meeting future workload demands.

The majority of medical centers in VISN 15 have multiple facility condition assessment (FCA) deficiencies. Options include demolition, construction of new buildings, or correction projects. The Network currently has FCA deficiencies in inpatient care, outpatient care and non-clinical areas. The VISN's 10 year plan proposes two Major Construction projects for VA/DoD joint ventures in Wichita and Leavenworth, multiple Minor Construction projects, and numerous NRM projects. NRM projects are also planned to improve facility security and sustainability.

Information Technology and Security corrections will be made across the VISN to address IT closet deficiencies, upgrade data/phone cabling to meet Facility Infrastructure Standards and Improvement (FISI) compliance and replacement of server rooms at three locations in the network.

There are numerous NRM projects identified in the Action Plan to address the energy requirements. Projects identified include reductions through use of solar and wind power, as well as replacement of HVAC units and closing a steam generation plant. Minor Construction projects have been included to address gaps in parking and patient privacy.

Energy

VISN 15 addresses Departmental energy goals through a \$108.5 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 15's plan proposes to further increase outpatient primary care access from its pre-SCIP state (70.3%) to 71.1%, bringing all markets above the 70% guideline; increase its inpatient and outpatient care capacities to reflect the 2018 projected demand; reduce its space deficit by 48%; and eliminate 97.8% of its FCA deficiencies.

Table 3-87: VISN 15 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access (current status)*	70.3%	71.1%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	88,409	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,114,554	0	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(76,825)	(39,992)	Amount of needed square feet (2018)
Condition (current status)	\$523,739,677	\$11,216,911	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 15 is estimated to be between \$3.6 and \$4.4 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-88: VISN 15 Capital Investment Projects by Type

VISN 15	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	5	1,044
Leases	5	19	11	70
Minor Construction	1	10	21	170
NRM	3	7	117	261
Other ²	-	-	14	6
Project Specific Subtotal		\$36		\$1,552
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	1,507
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	83
Partially Funded Major Construction ⁵	1	80	1	703
Total	10	\$116	169	\$3,845

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects and that will be identified during execution of the 2012 program.

⁵This line reflects the 2012 Budget request to move forward on one partially-funded major construction project. Any additional resources necessary to complete this project is included in the 2013-2021 TEC total. Additional information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

Table 3-89: VISN 15 2012 Above-Threshold* Potential Construction Projects (Sorted by State, by City, by Investment Type)

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	15	Leavenworth	KS	NRM	Replace Sanitary Risers/ Laterals Building, 90	1,437
VHA	15	Columbia	MO	NRM	Relocate Cardiology	3,606
VHA	15	Columbia	MO	NRM	Upgrade Electrical Ph.9	2,200
VHA	15	Kansas City	MO	Minor Construction	Expand Nuclear Medicine and Outpatient Services	9,792
					VISN 15 2012 Total	\$17,035

*For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance (NRM) projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-90: VISN 15 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	15	Marion	IL	Lease	Chester, IL Community-Based Outpatient Clinic	3,836
VHA	15	Marion	IL	Lease	Marion, IL - Paducah, KY Annex	7,137
VHA	15	Leavenworth	KS	Lease	Platte City, MO Community-Based Outpatient Clinic	3,644
VHA	15	Wichita	KS	Lease	El Dorado, KS Community Based Outpatient Clinic	2,830
VHA	15	Poplar Bluff	MO	Lease	Pocahontas, AR Community Based Outpatient Clinic	1,359
					VISN 15 2012 Total Leases	\$18,806

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as provided in the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 15 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates

Strategic Capital Investment Plan for VISN 16

Figure 3-25: VISN 16 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the

VHA Enrollee Health Care Projection Model. The comparison of available and ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 16, are provided in the table below.

Table 3-92: VISN 16 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	10,628,111
Plus Active New Construction	2,019,317
Less Retired Space	(3,559,805)
Less Future Need	(9,076,185)
Equals Space Gap**	11,438 (excess square feet)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed.

Current Infrastructure Challenges Identified by VISN 16

- None identified

Table 3-93: VISN 16 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	66.5%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	28,468	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	2,835,283	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	11,438 ¹	Amount of excess square feet (2018)
Condition (current status)	\$589,703,498	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

¹ New Orleans space need was projected based off of workload impacted by Hurricane Katrina, resulting in lower space needed in projections. This appears as “excess” space in SCIP until workload levels are re-established.

Currently, VISN 16 is below the 70% access to outpatient primary care guideline overall and in three out of its four markets. By 2021, VISN 16 needs to increase its inpatient capacity by 28,468 bed days of care, increase outpatient clinic stops by 2,835,283, reduce excess space by 11,438 square feet, and invest \$589,703,498 in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 16's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space, and condition gaps, and to address energy requirements.

Upon activation of all approved community based outpatient clinics (CBOC), all markets except the Upper Western market will meet the 70% outpatient primary care access guidelines. VISN 16's 10-Year Action Plan includes multiple additional access points (a combination of CBOCs, Outreach Clinics and Annexes) for the Upper Western market.

The difficulty in addressing the VISN's utilization gaps is compounded by its space gaps. Seven of the 10 medical centers have significant space needs. See footnote 1 from the table above. Utilization and space gaps are closed through new construction, (Major and Minor projects) as well as leases for new CBOCs and replacement leases to expand capacity at several of our existing CBOCs.

The condition gap is closed via Non-recurring Maintenance (NRM) projects at each site. The condition gap listed for Southeast Louisiana Veterans HCS, New Orleans, LA is for the old facility damaged by Hurricane Katrina. An approved Major Construction project will replace the entire medical center; therefore, no capital investment is planned to correct existing condition gaps.

VISN 16 will address its energy requirements through a number of measures to reduce energy and water use and construct renewable energy sources across our VISN. The greatest savings are expected in the areas of steam production and improvement of heating, ventilation, and air conditioning (HVAC) systems including chilled water production. The VISN will install solar thermal and photo voltaic renewable energy sources where feasible. The VISN 16 plan includes biomass Combined Heating and Power (CHP) for Houston and Little Rock. VISN 16 will be continuing water conservation efforts initiated from a previously completed energy savings performance contract (ESPC) project. The VISN will continue to install low flow toilets, low flow faucets, steam sterilizer ejector modifications, and steam sterilizer water misters. Water conserving design approaches have been used in three Major Construction projects.

VISN 16 will implement non-capital solutions in the areas of systems redesign, a robust tele-health program, expanded clinic hours, and VA/DoD sharing.

Energy

VISN 16 addresses Departmental energy goals through a \$211.4 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 16's plan proposes to increase outpatient primary care access from its pre-SCIP state (66.5%) to 70.7% and bring all markets above the 70% guideline; increase its inpatient and outpatient care capacities to reflect the 2018 projected demand (98% of each gap corrected); and eliminate its FCA deficiencies.

Table 3-94: VISN 16 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access (current status)*	66.5%	70.7%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	28,468	570	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	2,835,283	49,325	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	11,438	564,083 ¹	Amount of excess square feet (2018)
Condition (current status)	\$589,703,498	0	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

¹ New Orleans space was projected based off of workload impacted by Hurricane Katrina, resulting in lower space needed in projections. This appears as "excess" space in SCIP until workload levels are re-established.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 16 is estimated to be between \$2.0 and \$2.5 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-95: VISN 16 Capital Investment Projects by Type

VISN 16	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	8	673
Leases	3	38	15	46
Minor Construction	1	3	17	110
NRM	4	11	193	490
Other ²	-	-	8	1
Project Specific Subtotal		\$51		\$1,320
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	635
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	201
Partially Funded Major Construction ⁵	1	60	-	-
Total	9	\$111	241	\$2,157

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects and that will be identified during execution of the 2012 program.

⁵This line reflects the 2012 Budget request to move forward on one partially-funded major construction project. Any additional resources necessary to complete this project is included in the 2013-2021 TEC total. Additional information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

**Table 3-96: VISN 16 2012 Above-Threshold* Potential Construction Projects
(Sorted by State, by City, by Investment Type)**

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	16	Little Rock	AR	NRM	Install Combined Heating and Power Steam Generator Unit	5,500
VHA	16	Little Rock	AR	NRM	IT Closet/Security POAM Issues	1,900
VHA	16	Pineville	LA	NRM	Replace Heating, Ventilation and Air Conditioning Controls w/ Direct Digital Control	1,797
VHA	16	Muskogee	OK	NRM	Replace 1E9 Generator	1,540
VHA	16	Oklahoma City	OK	Minor Construction	Expand Lawton Outpatient Clinic	2,677
					VISN 16 2012 Total	\$13,413

*For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance (NRM) projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-97: VISN 16 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	16	Mobile ¹	AL	Lease	Construct New Panama City CBOC	6,565
VHA	16	Little Rock	AR	Lease	Expand and Consolidate Homeless Program via New Lease	9,901
VHA	16	Springfield ¹	MI	Lease	Replace Mt. Vernon Community Based Outpatient Clinic	21,438
					VISN 16 2012 Total Leases	\$37,904

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as provided in the SCIP Action Plan.

¹This Lease requires Congressional authorization; see Budget Chapter 6 VA Lease Notifications, Major Medical Facility Project & Lease Authorizations for a more detailed description.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 16 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 17

Figure 3-26: VISN 17 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and

ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 17, are provided in the table below.

Table 3-99: VISN 17 Space Needs

Space Analysis	Gross Square Feet
Total Current Available Space	6,531,335
Plus Active New Construction	1,595,027
Less Retired Space	(2,006,933)
Less Future Need	(6,679,774)
Equals Space Gap**	(560,345) (square feed needed)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not add due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed.

Current Infrastructure Challenges Identified by VISN 17

- Several facilities are landlocked
- North Texas market is prone to tornados, wind, and extreme heat
- Dallas VAMC is located in a high crime area requiring elevated security measures

Table 3-100: VISN 17 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	77.2%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	55,368	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	2,159,164	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(560,334)	Amount of needed square feet (2018)
Condition (current status)	\$169,707,566	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 17 is above the 70% access to outpatient primary care guidelines in all four markets. By 2021, VISN 17 needs to increase its inpatient capacity by 55,368 bed days of care, increase outpatient clinic stops by 2,159,164, increase space inventory by 560,334 square feet, and invest \$169,707,566 in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 17's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space, and condition gaps, and to address energy requirements.

Utilization gaps that have over a 50% increase in workload growth include Primary Care, Medical and Surgical specialties, Pathology and Laboratory, Mental Health, and Radiology and Nuclear Medicine. These are being addressed through expansion of five existing clinics (South Bexar, Frank Tejada, Round Rock, Tyler and North Central Federal Clinic), one new clinic (Copperas Cove); and expansion and renovation of space VISN-wide. Some gaps will be addressed through previously approved projects including the expansion of the Fort Worth Outpatient Clinic, the Austin Outpatient Clinic, the Ambulatory Surgery and Specialty Care Center in Harlingen and the LaGrange Outreach Clinics.

In 2018, VISN 17 will have a significant space deficiency. An ambitious program of Major and Minor Construction projects, combined with new leases, will serve to address this issue.

As of 2009, VISN 17 had \$169.7M in FCA deficiencies that were rated D or F during the triennial review. The majority of these deficiencies (62%) is in the various utility systems (electrical, mechanical, etc) and will also impact on energy consumption. The condition gap will be closed and all deficiencies corrected through the Non-recurring Maintenance (NRM) program.

Non-capital solutions include enhancing telehealth in outpatient clinics, providing extended clinic hours, utilizing mobile medical units for rural populations, and hiring additional staff. VISN 17's plan also identifies strategies for meeting the Secretary's priorities of ending Veteran homelessness in five years, and expanding access to primary care for all Veterans with an emphasis on women Veterans and Veterans in rural markets

Energy

VISN 17 addresses Departmental energy goals through a \$123 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 17's plan proposes to increase outpatient primary care access from its pre-SCIP state (77.2%) to 78%; increase its inpatient and outpatient care capacities to reflect the 2018 projected demand; correct its space deficit; and eliminate 100% of its FCA deficiencies.

Table 3-101: VISN 17 SCIP Implemental Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access (current status)*	77.2%	78.0%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	55,368	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	2,159,164	0	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(560,334)	0	Amount of needed square feet (2018)
Condition (current status)	\$169,707,566	0	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 17 is estimated to be between \$2.0 and \$2.4 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-102: VISN 17 Capital Investment Projects by Type

VISN 17	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	1	123
Leases	5	24	2	7
Minor Construction	-	-	18	174
NRM	8	18	67	195
Other ²	-	-	-	-
Project Specific Subtotal		\$42		\$500
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	1,208
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	150
Partially Funded Major Construction ⁵	-	-	2	301
Total	13	\$42	90	\$2,158

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects and that will be identified during execution of the 2012 program.

⁵Information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

**Table 3-103: VISN 17 2012 Above-Threshold* Potential Construction Projects
(Sorted by State, by City, by Investment Type)**

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	17	Bonham	TX	NRM	Roof Replacement	1,650
VHA	17	Bonham	TX	NRM	Upgrade IT systems	1,100
VHA	17	Dallas	TX	NRM	Roof Replacement	1,650
VHA	17	Dallas	TX	NRM	B.1 Renovation for Administration Space	2,248
VHA	17	Dallas	TX	NRM	Patient Center Medical Home	1,100
VHA	17	Dallas	TX	NRM	Exterior and Building Physical Security	1,100
VHA	17	Dallas	TX	NRM	Renovate Medical Inpatient Nursing Unit for Privacy 5th Floor	2,456
VHA	17	Waco	TX	NRM	Waco Energy Plant	6,696
					VISN 17 2012 Total	\$18,000

*For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance (NRM) projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-104: VISN 17 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	17	Dallas	TX	Lease	Homeless Community Domiciliary	7,478
VHA	17	Round Rock	TX	Lease	Round Rock Community-Based Outpatient Clinic	5,928
VHA	17	San Antonio	TX	Lease	North Central Federal Clinic Expansion	4,142
VHA	17	San Antonio	TX	Lease	South Bexar Clinic Expansion (Brooks City Base)	4,560
VHA	17	Tyler	TX	Lease	Tyler Community Based Outpatient Clinic	2,050
					VISN 17 2012 Total Leases	\$24,158

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as provided in the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 17 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 18

Figure 3-27: VISN 18 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and

ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 18, are provided in the table below.

Table 3-106: VISN 18 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	4,638,495
Plus Active New Construction	239,311
Less Retired Space	(1,526,016)
Less Future Need	(5,054,550)
Equals Space Gap**	(1,702,760) (square feet needed)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not add due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed.

Current Infrastructure Challenges Identified by VISN 18

- Several facilities are landlocked
- Historic properties

Table 3-107: VISN 18 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	82.2%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	19,360	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,478,151	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(1,702,757)	Amount of needed square feet (2018)
Condition (current status)	\$253,440,419	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 18 is above the 70% access to outpatient primary care guideline in both markets. By 2021, VISN 18 needs to increase its inpatient capacity by 19,360 bed days of care, increase outpatient clinic stops by 1,478,151, increase space inventory by 1,702,757 square feet, and invest \$253,440,419 in its facilities to correct FCA deficiencies.

Action Plan Strategy:

VISN 18's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space, and condition gaps, and to address energy requirements.

Growth in VISN 18's Veteran population coupled with a wide geographical area demands a number of different strategies to address identified gaps. The strategies incorporate expansion, construction, leasing, and non-capital approaches. Generally, the acute inpatient care gaps for VISN 18 are projected to decline or experience single-digit growth. The gaps will be closed by making existing inpatient spaces more efficient while providing modern bedrooms and restrooms. The outpatient primary care access gap will be addressed through a combination of development of new or expanded primary care space including the continued use of community bases outpatient clinics (CBOC) and a variety of rural health initiatives that include home health care, telehealth, community partnerships, and other non-capital solutions.

Condition gaps will be addressed through the Major and Minor Construction programs. Energy gaps involve both capital and non-capital approaches. VISN 18 will leverage its geographic location to capture renewable energy opportunities, most notably solar power. Given the age of many of the facilities, a strategy to re-commission existing mechanical systems, as well as enhance existing building control systems to function in a more efficient fashion as begun.

Energy

VISN 18 addresses Departmental energy goals through a \$120.4 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 18's plan proposes to maintain access to outpatient primary care at its pre-SCIP state of 82.2%; increase its inpatient and outpatient care capacities to reflect the 2018 projected demand; reduce its space deficit by 99% and eliminate 99.3% of its FCA deficiencies.

Table 3-108: VISN 18 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access (current status)*	82.2%	82.2%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	19,360	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,478,151	9,316	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(1,702,757)	(13,187)	Amount of needed square feet (2018)
Condition (current status)	\$253,440,419	\$1,617,299	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 18 is estimated to be between \$2.5 and \$3.1 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-109: VISN 18 Capital Investment Projects by Type

VISN 18	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	7	934
Leases	6	138	19	219
Minor Construction	9	85	38	308
NRM	1	1	161	172
Other ²	-	-	0	0
Project Specific Subtotal		\$224		\$1,633
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	804
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	136
Partially Funded Major Construction ⁵	-	-	-	-
Total	16	\$224	225	\$2,573

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects and that will be identified during execution of the 2012 program.

⁵Information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

Table 3-110: VISN 18 2012 Above-Threshold* Potential Construction Projects (Sorted by State, by City, by Investment Type)

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	18	Phoenix	AZ	Minor Construction	Clinical Expansion	9,945

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	18	Phoenix	AZ	Minor Construction	Community Living Center Cultural Transformation, Phase 2	9,896
VHA	18	Phoenix	AZ	Minor Construction	Construction Parking Garage Phase 2	9,799
VHA	18	Prescott	AZ	Minor Construction	Expand Rehab Medicine & Supply Processing and Distribution	9,187
VHA	18	Tucson	AZ	Minor Construction	Mental Health Beds	9,846
VHA	18	Albuquerque	NM	Minor Construction	New 30 Bed Community Living Center Phase 1	9,597
VHA	18	Albuquerque	NM	Minor Construction	Construct New Acute Geriatric Psychiatry Unit	9,714
VHA	18	Amarillo	TX	Minor Construction	Rehabilitation/Prosthetic Addition	8,759
VHA	18	Amarillo	TX	NRM	Upgrade Elevators Buildings 1 and 29	1,180
VHA	18	Big Spring	TX	Minor Construction	New Community Living Center	8,253
					VISN 18 2012 Total	\$86,177

*For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance (NRM) projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-111: VISN 18 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	18	Albuquerque	NM	Lease	Lease Clinic Annex	3,100
VHA	18	Albuquerque	NM	Lease	Research Cooperative Studies	124,000
VHA	18	Farmington	NM	Lease	Farmington, NM, Vet Center	2,770
VHA	18	Gallup	NM	Lease	Gallup Community-Based Outpatient Clinic	2,452
VHA	18	Santé Fe	NM	Lease	Santé Fe Community-Based Outpatient Clinic	2,475
VHA	18	Santé Fe	NM	Lease	Santé Fe Vet Center	3,405
					VISN 18 2012 Total Leases	\$138,202

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as provided in the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 18 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 19

Figure 3-28: VISN 19 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the

VHA Enrollee Health Care Projection Model. The comparison of available and ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 19, are provided in the table below.

Table 3-113: VISN 19 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	3,763,054
Plus Active New Construction	904,987
Less Retired Space	(1,793,132)
Less Future Need	(3,201,526)
Equals Space Gap**	(326,617) (square feet needed)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed

Current Infrastructure Challenges Identified by VISN 19

- Historic properties
- Floor plans of existing buildings make modernization difficult

Table 3-114: VISN 19 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	91.5%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	10,703	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	998,833	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(326,617)	Amount of additional square feet needed (2018)
Condition (current status)	\$206,577,659	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 19 is above the 70% access to outpatient primary care guideline in all five markets. By 2021, VISN 19 needs to increase its inpatient capacity by 10,703 bed days of care, increase outpatient clinic stops by 998,833, increase space inventory by 326,617 square feet, and invest \$206,577,659 million in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 19's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space and condition gaps, and to address energy requirements.

Mental health and residential rehabilitation mental health gaps will be addressed through Minor Construction projects, as well as patient privacy gaps that require the addition of space to existing community living centers.

Minor Construction will also be utilized to address the lack of data server rooms and secured information technology (IT) space. The space gap will be mitigated through Minor Construction projects that will replace leased space, numerous Non-recurring Maintenance (NRM) projects, and reconfiguring administrative space using the hotel system.

Energy

VISN 19 addresses Departmental energy goals through a \$196.9 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 19's plan proposes to maintain its primary care access at its pre-SCIP state of 91.5%; increase inpatient and outpatient care capacities to reflect the 2018 projected demand; reduce its space deficit by 88%; and eliminate its FCA deficiencies.

Table 3-115: VISN 19 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access (current status)*	91.5%	91.5%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	10,703	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	998,833	4,707	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(326,617)	(38,572)	Amount of additional square feet needed (2018)
Condition (current status)	\$206,577,659	\$0	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) access data plus the addition of approved and active new construction.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 19 is estimated to be between \$1.1 and \$1.4 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-116: VISN 19 Capital Investment Projects by Type

VISN 19	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	4	154
Leases	2	8	4	8
Minor Construction	8	61	25	195
NRM	4	15	168	315
Other ²	-	-	19	39
Project Specific Subtotal		\$84		\$711
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	289
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	126
Partially Funded Major Construction ⁵	1	42	-	-
Total	15	\$126	220	\$1,126

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects and that will be identified during execution of the 2012 program.

⁵This line reflects the 2012 Budget request to move forward on one partially-funded major construction project. Any additional resources necessary to complete this project is included in the 2013-2021 TEC total. Additional information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

**Table 3-117: VISN 19 2012 Above-Threshold* Potential Construction Projects
(Sorted by State, by City, by Investment Type)**

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	19	Grand Junction	CO	Minor Construction	New Rehabilitation/Prosthetics Building	9,087
VHA	19	Grand Junction	CO	Minor Construction	Parking Structure	9,620
VHA	19	Salt Lake City	UT	Minor Construction	New Specialty Clinic Building	9,897
VHA	19	Salt Lake City	UT	Minor Construction	Prosthetics/Orthopedics/Neurology/Holistic Medicine Expansion	9,964

VHA	19	Port Angeles	WY	Minor Construction	Domiciliary Expansion & Compensated Worth Therapy Transitional Residence	9,105
VHA	19	Sheridan	WY	NRM	Boiler Replacement	9,500
VHA	19	Sheridan	WY	NRM	Renovate Admin Space to Convert to Expanded Dental Clinic	891
VHA	19	Sheridan	WY	NRM	Renovate Building 6	2,225
VHA	19	Sheridan	WY	NRM	Renovate Building 3	2,747
					VISN 19 2012 Total	\$76,089

* For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

*Non-recurring Maintenance projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-118: VISN 19 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	19	Fort Harrison	MT	Lease	Helena Sleep Lab Relocation	7,287
VHA	19	Casper	WY	Lease	Casper CBOC Relocation	740
					VISN 19 2012 Total Leases	\$8,027

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as provided in the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 19 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 20

Figure 3-29: VISN 20 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and

ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 20, are provided in the table below.

Table 3-120: VISN 20 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	5,939,221
Plus Active New Construction	727,914
Less Retired Space	(3,205,384)
Less Future Need	(5,182,161)
Equals Space Gap**	(1,720,410) (square feet needed)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed

Current Infrastructure Challenges Identified by VISN 20

- Historic properties
- Unfavorable market conditions increase the costs of leasing

Table 3-121: VISN 20 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	74.5%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	9,888	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,474,639	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(1,720,411)	Amount of additional square feet needed (2018)
Condition (current status)	\$734,856,500	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 20 is above the 70% access to outpatient primary care guideline overall, but falls below 70% access in the Inland North market (65.9%). By 2021, VISN 20 needs to increase its inpatient capacity by 9,888 bed days of care, increase outpatient clinic stops by 1,474,639, increase space inventory by 1,720,411 square feet, and invest \$734,856,500 in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 20's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space and condition gaps, and to address energy requirements.

Major and Minor Construction projects that upgrade buildings seismically will also renovate interior spaces to install energy efficient building service equipment, upgrade finishes and improve functional layouts to mitigate space gaps and improve program adjacencies. Major and Minor Construction projects will also address patient privacy concerns, such as accommodating inpatients in single occupancy bedrooms. Major and Minor Construction projects that construct new space will primarily mitigate the need for space and enable consolidation and functional adjacencies of inpatient, outpatient or ancillary functions and services. Veteran-centered care models require alterations to existing capital assets to accommodate improved patient and staff interactions.

Non-recurring Maintenance (NRM) projects are planned to address non-seismic FCA deficiencies and installation of energy saving building service equipment. Numerous existing Community Based Outpatient Clinic (CBOC)/Vet Center leases expire during the plan years. For a majority of them, new expansion leases will be established, shifting services provided to the population centers in need.

VISN 20 plans to leverage underutilized land and building assets by offering them for re-use. Enhanced Use Leases (EUL) will be used to develop assets to mitigate homelessness among Veterans and their families at selected medical centers. Other gaps being addressed in VISN 20's capital plan include additional parking, mitigating Research space and condition deficiencies and emergency preparedness projects.

VISN 20 will employ non-capital solutions to mitigate access and utilization demands for care via flexible contract methods for rural health when it is more cost effective than investing in capital resources. VISN 20 will also improve maintenance and operational procedures to ensure optimum performance of building service equipment by training staff and raising awareness of employees and patients as it relates to electrical usage and lighting spaces only when occupied.

Energy

VISN 20 addresses Departmental energy goals through a \$220.2 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 20's plan proposes to increase outpatient primary care access from its pre-SCIP state (74.5%) to 75.4% through a combination of capital and non-capital solutions; increase its inpatient and outpatient care capacities to reflect the 2018 projected demand; reduce its space deficit by 93%; and eliminate 99.6% of its FCA deficiencies.

Table 3-122: VISN 20 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access (current status)*	74.5%	75.4%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	9,888	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,474,639	0	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(1,720,411)	(121,244)	Amount of additional square feet needed (2018)
Condition (current status)	\$734,856,500	\$3,081,890	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction facilities.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 20 is estimated to be between \$2.2 and \$2.7 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-123: VISN 20 Capital Investment Projects by Type

VISN 20	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	8	1,240
Leases	4	30	4	13
Minor Construction	2	14	31	233
NRM	2	5	85	156
Other ²	-	-	9	11
Project Specific Subtotal		\$48		\$1,653
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	307
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	136
Partially Funded Major Construction ⁵	1	48	2	258
Total	9	\$96	139	\$2,355

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects and that will be identified during execution of the 2012 program.

⁵This line reflects the 2012 Budget request to move forward on one partially-funded major construction project. Any additional resources necessary to complete this project is included in the 2013-2021 TEC total. Additional information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

Table 3-124: VISN 20 2012 Potential* Construction Projects (Sorted by State, by City, by Investment Type)

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	20	Boise	ID	Minor Construction	Residential Mental Health Facility	4,486
VHA	20	Boise	ID	NRM	Renovate Basement B.67 for Offices	2,122
VHA	20	Portland	OR	NRM	Building 100 Ward 9D Remodel	2,475
VHA	20	Vancouver	OR	Minor Construction	Construct New Primary Care Building	9,300
					VISN 20 2012 Total	18,383

* For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-125: VISN 20 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	20	Portland	OR	Lease	Portland Metro East Community-Based Outpatient Clinic Expansion	7,030
VHA	20	Salem ¹	OR	Lease	Salem Community-Based Outpatient Clinic Expansion	20,240
VHA	20	White City	OR	Lease	Grants Pass West - Community Based Outpatient Clinic	1,000
VHA	20	Walla Walla	WA	Lease	Expand Lewiston Community Based Outpatient Clinic	1,766
					VISN 20 2012 Total Leases	30,036

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as provided in the SCIP Action Plan.

¹This Lease requires Congressional authorization; see Budget Chapter 6 VA Lease Notifications, Major Medical Facility Project & Lease Authorizations for a more detailed description.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 20 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 21

Figure 3-30: VISN 21 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the

VHA Enrollee Health Care Projection Model. The comparison of available and ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 21, are provided in the table below.

Table 3-127: VISN 21 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	5,801,802
Plus Active New Construction	1,726,481
Less Retired Space	(2,944,439)
Less Future Need	(4,804,391)
Equals Space Gap**	(220,547) (square feet needed)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed

Current Infrastructure Challenges Identified by VISN 21

- Network is on a major seismic fault zone and multiple buildings are seismically deficient.
- Several landlocked facilities
- Historic properties
- Lack of adequate parking facilities

Table 3-128: VISN 21 Current SCIP Gap Status

SCIP Gap Type	Projected Gap	Gap Description
Outpatient Primary Care Access (current status)*	87.5%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	10,366	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	995,522	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(220,548)	Amount of additional square feet needed (2018)
Condition (current status)	\$549,048,580	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) access data plus the addition of approved and active new construction.

** The space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 21 is above the 70% access to outpatient primary care guideline in all six markets. By 2021, VISN 21 needs to increase its inpatient capacity by 10,366 bed days of care, increase outpatient clinic stops by 995,522, increase space inventory by 220,548 square feet, and invest \$549,048,580 in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 21's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space and condition gaps, and to address energy requirements.

The most significant gaps facing VISN 21 result from a combination of increasing utilization, particularly in the outpatient arena, with a capital inventory characterized by deficiencies in: facility condition, building and land seismic stability, energy management, physical security, emergency sustainable operations, information technology infrastructure, and overall space and parking deficits.

VISN 21's SCIP plan includes Major Construction projects to seismically retrofit, replace and demolish buildings, eliminating all known seismic deficiencies

Solutions to address access, space, utilization and parking gaps include Major Construction, Minor Construction, Non-recurring Maintenance (NRM), leased facilities, VA/DoD and VA/IHS collaborations, Enhanced Use Lease, (EUL), BRAC acquisitions, shared space with VBA, NCA, Vet Centers, and/or State entities; as well as broad use of tele-health technologies and other non-institutional care strategies. New construction will serve to decompress campuses and replace and enhance clinical and research capacity, establish state-of-the-art research facilities, and provide additional wet laboratory capacity.

VISN 21's strategy supports an array of diverse markets utilizing common approaches to closing gaps and supporting VA's guiding principles. Non-capital solutions include:

- Expanding part-time/low volume sites of care, and mobile tele-health/outreach clinics
- Eliminating Veteran-homelessness through support of the VISN concept of "no wrong door", including an extensive array of ambulatory and day outpatient treatment, as well as residential treatment programs available for homeless and at-risk Veterans
- Implementing improvements in clinical intake areas, number of providers per exam room

- Enhancing congregate patient spaces (pharmacy, emergency departments, etc.)
- Supporting information technology enhancements in scheduling, bed boards, records management, telephone care, etc
- Expanding sharing agreements, service contracts, and identify shared space and/or service opportunities with DoD, IHS, and Tribal clinics, as well as the State Department of Veteran Affairs/State Veteran Homes

Energy

VISN 21 addresses Departmental energy goals through a \$140.5 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 21's plan proposes to further increase outpatient primary care access from its pre-SCIP state (87.5%) to 89.7% through the implementation of non-capital solutions; increase inpatient and outpatient care capacities to reflect the 2018 projected demand (corrects 99% of each gap); reduce its space deficit by 93%; and eliminate 100% of its condition backlog.

Table 3-129: VISN 21 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access (current status)*	87.5%	89.7%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	10,366	95	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,474,639	13,279	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	(220,548)	(15,574)	Amount of additional square feet needed (2018)
Condition (current status)	\$549,048,580	0	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction facilities.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 21 is estimated to be between \$4.5 and \$5.5 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-130: VISN 21 Capital Investment Projects by Type

VISN 21	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction ²	2	439	13	1,461
Leases	3	51	5	230
Minor Construction	11	97	44	340
NRM	1	2	123	251
Other ³	-	-	8	11
Project Specific Subtotal		\$589		\$2,293
Out Year Planning (Minors and NRM) ⁴	N/A	N/A	-	920
Below Threshold/ Emergent Needs ⁵	TBD	TBD	-	142
Partially Funded Major Construction ⁶	1	76	3	936
Total	18	\$665	196	\$4,292

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²2012 costs reflect the TEC to complete major projects in Reno & San Francisco. The 2012 Budget requests \$43.8M to initiate these projects.

³Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

⁴Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁵The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRMs and that will be allocated during the year.

⁶This line reflects the 2012 Budget request to move forward on one partially-funded major construction project. Any additional resources necessary to complete this project is included in the 2013-2021 TEC total. Additional information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

**Table 3-131: VISN 21 2012 Above-Threshold* Potential Construction Projects
(Sorted by State, by City, by Investment Type)**

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	21	Fresno	CA	Minor Construction	Expand and relocate Imaging Services to 1st Floor, Building 1	9,464
VHA	21	Fresno	CA	Minor Construction	Expand the Community Living Center	9,735
VHA	21	Martinez	CA	Minor Construction	Construct Parking Structure with Purchased Parking Lot	2,400
VHA	21	Menlo Park	CA	Minor Construction	Seismic Correction of Building 323 and Infrastructure Enhancements	9,800
VHA	21	Menlo Park	CA	Minor Construction	Expand Homeless Domiciliary Outpatient and Therapy facilities	9,800
VHA	21	Menlo Park	CA	NRM	Replace Site Lighting and Infrastructure Upgrades	2,001
VHA	21	Palo Alto	CA	Minor Construction	Construct a Patient Simulation Center for the National SimLEARN Initiative	9,800
VHA	21	Sacramento	CA	Minor Construction	Construct Medical Specialties Building	9,310
VHA	21	Sacramento	CA	Minor Construction	Purchase Land for Medical Center Expansion and Parking	8,715
VHA	21	San Francisco	CA	Major Construction	Correct Seismic Deficiencies in Buildings 1, 6, 8, and 12	224,800
VHA	21	San Francisco	CA	Minor Construction	Seismic Retrofit Building #8	9,994
VHA	21	Reno	NV	Major Construction	Correct Seismic Deficiencies and Expand Clinical Services - Building 1	213,800
VHA	21	Reno	NV	Minor Construction	Relocate/Upgrade/Expand Intensive Care Unit	9,500
VHA	21	Reno	NV	Minor Construction	Purchase Land for Medical Center Expansion and Parking	8,800
					VISN 21 2012 Total	\$537,919

* For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-132: VISN 21 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	21	Redwood City	CA	Lease	Redwood City Community-Based Outpatient Clinic Lease	3,800
VHA	21	Sacramento	CA	Lease	Leased Warehouse Space	2,130
VHA	21	San Jose ¹	CA	Lease	San Jose Community-Based Outpatient Clinic Lease Replacement	45,546
VISN 21 2012 total Leases						\$51,476

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as given the SCIP Action Plan.

¹This Lease requires Congressional authorization; see Budget Chapter 6 VA Lease Notifications, Major Medical Facility Project & Lease Authorizations for a more detailed description.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 21 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 22

Figure 3-31: VISN 22 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the VHA Enrollee Health Care Projection Model. The comparison of available and

ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 22, are provided in the table below.

Table 3-134: VISN 22 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	7,455,635
Plus Active New Construction	1,738,583
Less Retired Space	(3,431,273)
Less Future Need	(5,733,179)
Equals Space Gap**	29,766 (excess square feet)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed

Current Infrastructure Challenges Identified by VISN 22

- Seismic activities in Southern California
- Historic properties

Table 3-135: VISN 22 Current SCIP Gap Status

SCIP Gap	Current Status	Description
Outpatient Primary Care Access (current status)*	94.0%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	12,385	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,191,683	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	29,766	Amount of additional square feet needed (2018)
Condition (current status)	\$726,185,898	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 22 is above the access to outpatient primary care guideline of 70% in both markets. By 2021, VISN 22 needs to increase its inpatient capacity by 12,385 bed days of care, increase outpatient clinic stops by 1,191,683, reduce excess space by 29,766 square feet, and invest \$726,185,898 million in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 22's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space and condition gaps, and to address energy requirements.

Capital projects are the primary source of narrowing the gaps identified by SCIP, but strong relationships with affiliates and significant medical expertise makes non-capital solutions an additional gap reducing option.

VISN 22's vulnerabilities are primarily due to aging infrastructure, limited usable space, functional deficiencies, and projected increases in utilization of services, all of which are most effectively addressed through capital endeavors. In addition to the gaps that must be resolved, a large geographical area of VISN 22 is located in a high seismic activity area. Thus, the plan includes multiple projects that address critical seismic deficiencies that are of extremely high priority for the VISN. The plan also includes projects that will resolve inpatient privacy issues by converting semi private inpatient space to fully private patient space, thus enhancing the "Veteran- Centric" care model. Additionally, VISN 22's plan includes projects that will meet special initiatives, such as comprehensive Women Veterans care, Operation Enduring Freedom & Operation Iraqi Freedom (OEF/OIF) initiatives in addition to the "No Homeless Veterans" initiative.

Energy

VISN 22 addresses Departmental energy goals through a \$259.7 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 22's plan proposes to maintain outpatient primary care access at its pre-SCIP state of 94%; increase its inpatient and outpatient care capacities to reflect the 2018 projected demand; eliminate excess space; and eliminate 100% of its condition.

Table 3-136: VISN 22 SCIP Implementation Gap Results

SCIP Gap	Current Status or Gap	Post-SCIP Status or Gap	Gap Description
Outpatient Primary Care Access (current status)*	94.0%	94.0%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	12,385	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,191,683	0	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	29,766	0	Amount of additional square feet needed (2018)
Condition (current status)	\$726,186,897	0	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction facilities.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 22 is estimated to be between \$5.2 and \$6.3 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-137: VISN 22 Capital Investment Projects by Type

VISN 22	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction ²	1	1028	8	992
Leases	1	5	5	98
Minor Construction	4	36	27	225
NRM	25	109	213	458
Other ³	-	-	2	30
Project Specific Subtotal		\$1,178		\$1,804
Out Year Planning (Minors and NRM) ⁴	N/A	N/A	-	1,798
Below Threshold/ Emergent Needs ⁵	TBD	TBD	-	238
Partially Funded Major Construction ⁶	-	-	3	748
Total	31	\$1,178	258	\$4,588

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²2012 costs reflect the TEC to complete major project in West Los Angeles. The 2012 Budget requests \$50.8M to initiate this project.

³Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

⁴Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁵The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRMs and that will be allocated during the year.

⁶Information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

**Table 3-138: VISN 22 2012 Above-Threshold* Potential Construction Projects

VHA	22	West Los Angeles	CA	NRM	Ambulatory Care Mental Health Medical Home	9,394
					VISN 22 2012 Total	\$1,172,693

* For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-139: VISN 22 2012 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	22	San Diego	CA	Lease	Research Lease	4,850
					VISN 22 2012 Total Leases	\$4,850

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as provided in the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 22 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Strategic Capital Investment Plan for VISN 23

Figure 3-32: VISN 23 Map

Space Analysis

VA conducted a Space Analysis to provide an overview of the space currently available, adding in any funded changes to that space, and comparing the resulting available inventory to the projected future space needed for 2018. The current space is baselined from 2009. The items considered as removing or retiring space from available inventory include planned disposals (included in the 5-Year Plan), vacant space without a planned disposal (vacant because it cannot be used to meet service needs and not planned for disposal due to historic, environmental, or other issues), poor condition space that will need to be replaced, expected lease terminations, and any tenant space that is not available for VA use. Items considered to increase available inventory include funded or partially funded Majors, Minors (2008 and 2009), leases, Enhanced Use Lease (EUL) Space, and planned Community Based Outpatient Clinic (CBOC) space. The resulting available inventory was compared to the projected future need for 2018. This space need was derived using the VHA Space Calculator planning tool using projected workload (Bed Days of Care and Clinic Stops) for 2018 from the

VHA Enrollee Health Care Projection Model. The comparison of available and ideal space results in a defined space “gap”, either positive meaning there is more space than is needed or negative meaning additional space is required to meet the projected demand. Space needs for VISN 23, are provided in the table below.

Table 3-141: VISN 23 Space Analysis

Space Analysis	Gross Square Feet
Total Current Available Space	8,176,554
Plus Active New Construction	956,933
Less Retired Space	(3,514,736)
Less Future Need	(5,303,491)
Equals Space Gap**	315,260 (excess square feet)

* “Retired Space” refers to planned disposals and other poor condition or otherwise unusable space.

** Number may not equal the numbers below due to rounding. Positive numbers indicate excess space, negative numbers indicate space needed

Current Infrastructure Challenges Identified by VISN 23

- Several landlocked facilities
- Historic properties
- Lack of adequate parking

Table 3-142: VISN 23 Current SCIP Gap Status

SCIP Gap	Current Status	Measure
Outpatient Primary Care Access (current status)*	56.1%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	10,744	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,178,970	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	315,260	Amount of additional square feet needed (2018)
Condition (current status)	\$295,089,061	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction facilities.

** Space gap is calculated in the table above. Positive numbers indicate excess space, negative numbers indicate space needed.

Currently, VISN 23 is below the 70% access to outpatient primary care guideline in all 5 markets. By 2021, VISN 23 needs to increase its inpatient capacity by 10,744 bed days of care, increase outpatient clinic stops by 1,178,970, reduce excess space by 315,260 square feet, and invest \$295,089,061 million in its facilities to correct FCA deficiencies.

Action Plan Strategy

VISN 23's 10-year Action Plan utilizes a mix of capital and non-capital solutions to close the currently-identified access, utilization, space and condition gaps, and to address energy requirements.

VISN 23 is the second most rural network in the VHA and 65% of its veterans are in the highly rural category. To reach out and serve rural veterans, the network has established numerous community based outpatient clinics (CBOC), which bring services closer to rural veterans and alleviate some of the Outpatient Primary Care workload from the main campuses. VISN 23 is moving forward with innovative approaches to improve access to outpatient primary care for rural veterans.

Non-recurring maintenance (NRM) projects will continue to address condition gaps. Future NRMs will continue to upgrade facilities but will also focus on renovations to improve functionality of space and to accommodate new healthcare technologies. Significant NRM investments have improved the patient environment through projects to upgrade patient wards, clinic areas, and public spaces (corridors, lobbies, etc). Planning at the network level includes multi-facility projects aimed at providing more efficient, effective, stress-free patient care, including new MRIs at several facilities which incorporate an "ambient experience" for patients. VISN projects are also underway for Clinical Information/Record Keeping, digital operating rooms, and a virtual ICU that will integrate and improve patient care.

A patient-centered approach will continue to be a priority as the VISN moves forward with its SCIP plans. A Major Construction project is planned for the Minneapolis VAMC to expand the Polytrauma Center and the community living center (CLC). This will correct space and functional deficiencies in rehabilitation medicine and relieve over-crowding and patient privacy issues. A Major Construction project planned at the Sioux Falls VAMC will move the CLC into a new building and provide space for therapy, thus allowing space in the existing facility to be utilized for other medical center needs. A Major Construction project for a new domiciliary is planned for the Black Hills in South Dakota (Rapid City, Replace Domiciliary).

Minor Construction projects in 2012 and beyond will continue to address gaps in the areas of Primary and Specialty Care, Mental Health, Dental, inpatient and critical ancillary services such as Lab, Pathology, Radiology and Surgery.

EULs are underway at Lincoln, NE, and Knoxville, IA, to divest the properties, allowing patient care to be delivered in modern, efficient CBOCs in those communities. Also, the Building Utilization Review and Reuse (BURR) initiative is assessing property at Fort Snelling, MN, as well as both campuses in the Black Hills. Energy conservation projects (geothermal, wind turbine and solar) are being constructed at St. Cloud, MN and Des Moines, IA. The VISN 23 Energy Plan meets reduction targets on a VISN level by 2015.

Energy

VISN 23 addresses Departmental energy goals through a \$117 million investment in NRM projects over the 10-year SCIP plan period.

SCIP Implementation Gap Results

VISN 23's plan increases outpatient primary care access from its pre-SCIP state (56.1%) to 69.9%; increases inpatient and outpatient care capacities to reflect the 2018 projected demand; reduces excess space by 100%; and eliminates 98% of its FCA deficiencies.

Table 3-143: VISN 23 SCIP Implementation Gap Results

SCIP Gap	Current Status	Post-SCIP Status	Description
Outpatient Primary Care Access (current status)*	56.1%	69.9%	Percent of enrollees within drive-time guidelines for outpatient primary care (Corporate Target = 70%)
Inpatient Utilization (# bed days of care)	10,744	0	Additional inpatient capacity needed to meet 2018 projected demand (BDOC)
Outpatient Utilization (# clinic stops)	1,178,967	3	Additional outpatient capacity needed to meet 2018 projected demand (Clinic Stops)
Space**	315,260	(357)	Amount of additional square feet needed (2018)
Condition (current status)	\$295,089,061	\$14,270,061	Estimated total cost to eliminate currently-identified Facility Condition Assessment (FCA) deficiencies

* Outpatient Primary Care Access gap is calculated using the current (2008) primary care access data plus the addition of approved and active new construction facilities.

** Positive numbers indicate excess space, negative numbers indicate space needed.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for VISN 23 is estimated to be between \$2.1 and \$2.6 billion. This range is an estimate only; costs may change as projects are further refined.

Table 3-144: VISN 23 Capital Investment Projects by Type

VISN 23	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	3	248
Leases	6	29	3	8
Minor Construction	6	43	38	266
NRM	4	13	131	191
Other ²	-	-	11	13
Project Specific Subtotal		\$85		\$726
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	643
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	242
Partially Funded Major Construction ⁵	-	-	1	621
Total	16	\$85	187	\$2,232

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VHA Action Plans include under threshold lump sums for NRMs below the established dollar threshold of \$500,000. For 2012, VHA has a lump sum, below threshold amount of \$228.9 million for emergent needs and below threshold NRM projects that will be identified during execution of the 2012 program.

⁵Information on partially funded projects can be found in Appendix I, History of VHA Major Construction Projects Update.

**Table 3-145: VISN 23 2012 Above-Threshold Potential* Construction Projects
(Sorted by State, by City, by Investment Type)**

Admin	VISN	City	State	Project Type**	Project Name	Total Estimated Cost (\$000s)
VHA	23	Des Moines	IA	Minor Construction	Supply Processing and Distribution Addition	9,082
VHA	23	Iowa City	IA	NRM	Renovate Inpatient Ward 5E for patient privacy	4,554
VHA	23	Iowa City	IA	Minor Construction	Primary Care Mental Health/ Ambulatory Care/ Radiology/Egress Stairwell Addition	9,970
VHA	23	Minneapolis	MN	NRM	Replace Transfer Switches	1,000
VHA	23	St. Cloud	MN	Minor Construction	Reconfigure/Expand Buildings 9 and 28 for Residential Rehabilitation Therapy Program	8,069
VHA	23	St. Cloud	MN	NRM	Reconfigure for Medical Home Model, Building 4, First Floor	5,257
VHA	23	Fort Meade	SD	Minor Construction	Surgical Tower Addition	9,266
VHA	23	Sioux Falls	SD	NRM	5th Floor Renovation	1,986
VHA	23	Sioux Falls	SD	Minor Construction	Emergency Department Expansion With Relocation Of Oncology Center	3,767
VHA	23	Sioux Falls	SD	Minor Construction	Expand Primary Care Space	3,149
					VISN 23 2012 Total	\$56,098

* For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VHA NRMs is \$500,000. All under-threshold projects were included in the overall VISN estimate as lump-sums.

**Non-recurring Maintenance projects are considered part of the construction programs budget request although they are funded from the VHA Medical Facilities operating account.

Table 3-146: VISN 23 Potential Leases*

Admin	VISN	City	State	Project Type	Project Name	Total Estimated Cost** (\$000s)
VHA	23	Iowa City	IA	Lease	Replacement Lease Bettendorf Community Based Outpatient Clinic	6,053
VHA	23	Iowa City	IA	Lease	Replacement Community-Based Outpatient Clinic Lease - Dubuque	6,883
VHA	23	Maplewood	MN	Lease	Maplewood, MN Community-Based Outpatient Clinic	1,801
VHA	23	Rapid City	SD	Lease	Replace Rapid City Community-Based Outpatient Clinic	11,000
VHA	23	Chippewa Falls	WI	Lease	Chippewa Falls, WI Community-Based Outpatient Clinic	1,426
VHA	23	Hayward	WI	Lease	Hayward, WI Community-Based Outpatient Clinic	1,536
					VISN 23 2012 Total Leases	28,699

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as given the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. Sharing, Enhanced Use Lease, and Disposal projects with a total estimated cost of \$0 are expected to have no capital investment costs to VA. The VISN 23 2013 - 2021 Cost Estimate Range does not include partially funded Major Construction projects, under-threshold estimates, or out-year planning estimates.

Chapter 8.4 National Cemetery Administration

Introduction

NCA provides services to Veterans and their families through five Memorial Service Networks (MSNs), administering burial benefit programs at 131 cemeteries and maintaining over 3 million gravesites. NCA also operates 800 buildings and maintains 19,000 acres. A map showing the five MSNs is provided below.

Figure 4-1: NCA MSN Map

Linkage to VA's Strategic Goals

The construction program is a critical element in NCA's strategy to achieve its performance objectives.

An important objective of the Department is to make it easier for Veterans and their families to receive the right benefits, meeting their expectations for quality, timeliness and responsiveness. One of the performance measures which is

impacted by NCA's construction program is measured by the percent of Veterans served by a burial option within a reasonable distance (75 miles) of their residence.

Construction projects to develop new national cemeteries will provide a burial option to Veterans and their families who are not currently served by a national, state or tribal government Veterans' cemetery within a reasonable distance of their residence. Projects to keep existing national cemeteries open by developing additional gravesites and columbaria, or by acquiring additional land, prevent the loss of a burial option for Veterans that are currently served by a national cemetery within a reasonable distance of their residence.

Another objective of VA is to educate and empower Veterans and their families through proactive outreach and effective advocacy. Two performance measures for this objective are impacted by NCA's construction programs. The first measure is the percent of survey respondents who rate national cemetery appearance as excellent. Construction projects such as irrigation improvements, renovation of historic structures, and road resurfacing are important to maintaining our cemeteries as national shrines. In most cases, these types of projects directly impact cemetery appearance and, thereby, client satisfaction. The second measure is the percent of respondents who rate the quality of service provided by the national cemeteries as excellent. Construction of committal shelters, public restrooms, and public information centers improves service to Veterans and their families.

Meeting Current and Future Burial Needs

Annual Veteran deaths are expected to be approximately 659,000 in 2011, and will continue to slowly decline. Interments in 2010 were approximately 112,000 and are expected to peak at about 120,000 in 2015. Interments will begin to decline gradually to approximately 113,000 in 2016. The total number of gravesites is expected to increase from approximately 3.1 million in 2010 to over 3.2 million in 2012. The number of gravesites maintained is expected to exceed 3.5 million in 2016.

The Veterans Millennium Health Care and Benefits Act, Public Law 106-117, directed VA to contract for an independent demographic study to identify those areas of the country where Veterans will not have reasonable access to a burial option in a national or state Veterans cemetery, and the number of additional cemeteries required through 2020. The National Cemetery Expansion Act of 2003, Public Law 108-109, directed VA to establish six new national cemeteries in the areas of Bakersfield, California; Birmingham, Alabama; Columbia/Greenville, South Carolina; Jacksonville, Florida; Sarasota County, Florida; and Southeastern Pennsylvania. These six areas were identified in the

demographic study. As of January 2010, all six of these VA cemeteries are open and conducting Veteran burials.

It is also critical for VA to continue to provide service at existing national cemeteries by completing phased development projects in order to make additional gravesites or columbaria available for interments. National cemeteries that will close due to depletion of grave space are identified to determine the feasibility of extending the service period of the cemetery by the acquisition of additional land or by the construction of columbaria. As public acceptance of cremation as a burial option continues to grow, and demand for this alternative increases, construction of columbaria is an option to maximize service delivery. VA will continue to develop columbaria, particularly in areas where land is scarce and the demand for cremation burials is high.

In addition to building, operating, and maintaining national cemeteries, NCA administers the Veterans' Cemetery Grant Program to provide grants to states or tribal governments to establish or expand Veterans cemeteries. Grants may fund up to 100 percent of the cost of establishing, expanding, or improving state or tribal government Veterans cemeteries, including the acquisition of initial operating equipment. These cemeteries may be located by the states in areas where there are no plans for NCA to operate and maintain a national cemetery.

New Burial Policies

The National Cemetery Administration (NCA) is committed to ensuring that Veterans and their families have convenient access to a burial option in a national, state, or tribal government Veterans cemetery, that the service they receive is dignified, respectful and courteous and that our system of cemeteries meets or exceeds the highest standards of appearance required by their status as national shrines.

NCA anticipates that by 2012, nearly 90 percent (89.8%) of Veterans will have access to a burial option in a national, state, or tribal government Veterans cemetery within 75 miles of their home.

Two new burial policies targeting increased access and availability of burial options for our Nation's Veterans were included in the President's 2011 budget request. The first policy revises how VA determines the need to establish a new national cemetery.

Policy for Establishing a New National Cemetery

- Previous policy was to establish new national cemeteries in areas of large unserved Veteran population – defined as 170,000.

- NCA evaluated recent state cemetery data which indicated a gap between the size of population centers served by a national cemetery ($\geq 170,000$) and state cemeteries ($\leq 82,000$). Under previous policy, Veterans in locations within that population gap would continue to be unserved.

The revised policy decreases the unserved Veteran population threshold to establish a new national cemetery from 170,000 to 80,000 within 75 miles of the potential location of a new national cemetery. Over 80 percent of those interred in national cemeteries resided within 75 miles of the cemetery at the time of their death. The 75-mile criterion is reasonable and will be maintained. The new policy will result in five new national cemeteries and provide a burial option to an additional 500,000 Veterans and their families in the areas of Central East, FL; Omaha, NE; Western NY; and Tallahassee, FL. A new national cemetery would also be established in southern Colorado to serve nearly 100,000 Veterans in advance of the closure of the existing cemetery in Fort Logan. (A replacement cemetery for Fort Logan would also be constructed in the Northern area of Colorado to serve over 200,000 Veterans.)

New Policy for Serving Urban Areas

The second policy establishes “Urban Initiative” locations to provide enhanced service in densely populated locales where existing cemeteries are far from the urban core. Distance from a national cemetery and travel time impact access to a burial option in a national cemetery. National cemeteries in some large urban centers show lower usage rates (selection of a national cemetery) and lower visitor satisfaction (post interment) when the cemetery is located at a distance from the urban core.

Under the initiative, VA would acquire relatively small tracts of land near or within the urban core and within the service area of established national cemeteries meeting the criteria for the establishment of columbaria, crypt and/or mausoleum satellite facilities.

In order to support the establishment of an urban satellite cemetery, the existing national cemetery must meet the following criteria:

- Serve a metropolitan area identified by the Census Bureau as one of the Top 50 Cities in the United States by Population.
- Be 50 miles or more from the urban core.
- Require travel time of one hour or greater from the urban core.
- Have documented Veteran utilization rates of less than 20 percent for at least two of the last three years.
- Have documented that clients cite travel time and/or distance as an access barrier on the Survey of Satisfaction with National Cemeteries at least five

percent above the national average for at least two of the last three survey administrations.

- Analyses of current usage rates and customer satisfaction results in large urban areas support the establishment of satellite cemeteries in New York City (Calverton National Cemetery), Los Angeles (Riverside National Cemetery), Chicago (Abraham Lincoln National Cemetery), and San Francisco/Oakland/ San Jose (Sacramento Valley and San Joaquin Valley National Cemeteries).
- Urban Satellites will be managed effectively by staff from the “parent” national cemetery and/or contracts.

The new policy seeks to improve travel time and access in urban areas currently served by a national cemetery.

National Shrine Commitment

Each national cemetery exists as a national shrine worthy of the sacrifice of our Nation’s Veterans and their families. National cemeteries carry expectations of appearance that set them apart from private cemeteries. VA will continue to maintain the appearance of national cemeteries as national shrines, dedicated to preserving our Nation’s history, nurturing patriotism, and honoring the service and sacrifice Veterans have made. Infrastructure projects such as irrigation improvements, renovation of historic structures, and road resurfacing are important to maintaining our cemeteries as national shrines.

Action Plan Strategy

NCA’s 10-year Action Plan strategy addresses its access, condition, space and energy gaps. NCA’s access gap is closed by major and minor construction projects that increase or provide new burial services through the establishment of new national cemeteries and prevent the closure of current cemeteries through expansion projects. The space gap is closed through new construction, including administration buildings, public restrooms and committal shelters. The condition gap is closed by projects that address deficiencies in buildings rated “D” or “F” in the Facility Condition Assessment as well as projects to decrease gaps in Visual/National Shrine assessments. NCA’s Action Plan also addresses the energy gap through a number of minor projects that will increase water and energy efficiency and meet VA’s goals in those areas.

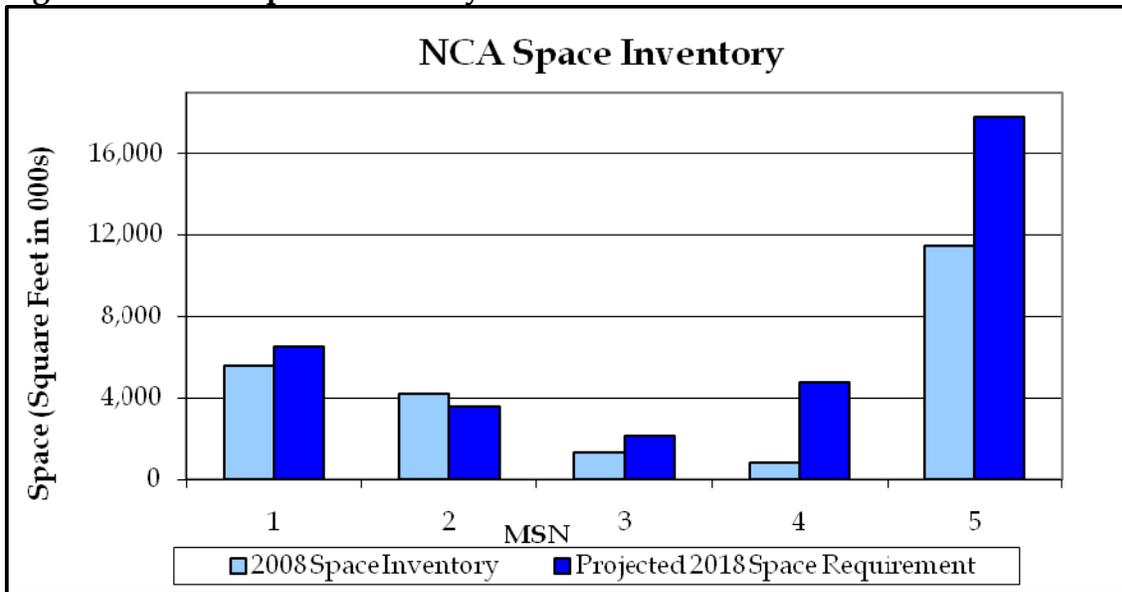

NCA Gaps

Access gap: Defined as the percentage of Veterans who have access to a burial option within 75 miles of their home. A corporate level goal that is expected to be addressed for each gap, as a result of implementing the 10-Year Action Plan, has been established. The Corporate and Strategic Target for NCA Access is 94%.

The percent of Veterans served by a burial option in a national, state or tribal government Veterans cemetery in 2010 was 88.1 percent. NCA expects to meet a target of 89.8% in 2012 by activating new state, and tribal government Veterans' cemeteries through the Veterans Cemetery Grants Program. NCA expects to meet the strategic target of 94% by activating five currently planned new national cemeteries, and using its grant program to encourage the establishment of additional state and tribal government Veterans' cemeteries. The planned new national cemeteries will address 2.4% of the gap between the percent of Veterans served by a burial option in a national, state or tribal government Veterans cemetery in 2010 and the strategic target. State and tribal government Veterans cemeteries will address the remaining 1.8% of the gap.

Space Gap: Defined as the need for administrative space or committal shelters due to an increase in demand at a given facility. As the following chart illustrates, NCA is facing a space deficit across all MSNs, with the greatest need found in MSN 5. Implementing all projects identified by SCIP in NCA's 10-Year Action Plan will address all space gaps. A corporate level goal that is expected to be addressed for each gap, as a result of implementing the 10-Year Action Plan, has been established. The Corporate Target for NCA space is to close 95% of all currently identified space gaps.

Figure 4-2: NCA Space Inventory

Condition Gap: There are two types of condition gaps for NCA: FCA and Visual/National Shrine Impact. Currently NCA estimates that the cost of remediating all currently-identified FCA deficiencies is \$29.3 million. According to the NCA 10-Year Action Plan, all of these deficiencies will be fully corrected through NRM and Minor construction projects by 2021.

Table 4-1: NCA Condition Gap by MSN

MSN	Estimated Cost of Remediating Identified FCA Deficiencies (dollars in 000s)	Percent of Gap Filled by 2021
1	\$6,400	100%
2	\$3,900	100%
3	\$3,400	100%
4	\$1,400	100%
5	\$14,200	100%
Total	\$29,300	100%

The Visual/National Shrine impact gap is based on client (Veterans family members or funeral homes) satisfaction with the appearance of National Cemeteries.

Table 4-2: NCA Visual/National Shrine Impact Gap by MSN

MSN	Cemetery Appearance-Percent Below Target	Estimated Cost of Remediating Identified Deficiencies (dollars in 000s)
1	25.65%	\$33,000
2	21.13%	\$45,000
3	21.23%	\$7,000
4	21.74%	\$57,000
5	31.83%	\$66,000
Average	24.32%	Total \$208,000

Energy

NCA plans to address Departmental energy goals through a \$2.9 million investment in Minor projects over the 10-year SCIP plan period.

SCIP Estimated 10-Year Magnitude Costs

The estimated 10-year estimated cost to correct all currently-identified gaps for NCA is approximately estimated to be between \$1.3 and \$1.6 billion. This range is an estimate only; costs may change as projects are further refined.

Table 4-3: NCA Capital Investment Projects by Type

NCA	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	1	24	21	715
Leases	-	-	-	-
Minor Construction	10	32	85	273
NRM	N/A	N/A	N/A	N/A
Other ²	-	-	0	0
Project Specific Subtotal		\$56		\$987
Out Year Planning (Minors and NRM) ³	N/A	N/A	-	312
Below Threshold/ Emergent Needs ⁴	TBD	18	-	93
Total	11	\$74	106	\$1,393

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for NRMs for years 2015-2021 and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴Below threshold refers to projects with costs below the established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for NCA minors is \$1 million. NCA has a lump sum below threshold amount of \$18.4M for emergent needs and Minor Construction that will be identified during execution of the 2012 program. NCA's NRM projects are below the dollar threshold for inclusion by project in the plan and are accounted for in the below threshold/emergent needs line.

Note: The funding requirements do not include the activation costs (funds needed to start up project –equipment, etc) nor do they include the recurring costs such as additional salaries or staff needed to operate facilities.

Table 4-4: NCA 2012 Above Threshold* Potential Construction Projects
(Sorted by State, by City, by Investment Type)**

Admin	City	State	Project Type	Project Name	Total Estimated Cost (\$000)
NCA	San Bruno	CA	Minor Construction	Repair road, curb, & storm drainage/replace signage	7,491
NCA	Honolulu	HI	Major Construction	Columbarium Expansion	23,700
NCA	Chicago	IL	Minor Construction	Urban Initiative	10,000

Admin	City	State	Project Type	Project Name	Total Estimated Cost (\$000)
NCA	Springfield	IL	Minor Construction	1,000-niche columbarium	1,366
NCA	Fort Scott	KS	Minor Construction	Renovate Maint Facility & Restore Rostrum	1,064
NCA	Leavenworth	KS	Minor Construction	Remodel/ Expand Admin & PIC Bldgs	1,013
NCA	Lebanon	KY	Minor Construction	Renovate Meigs Lodge	1,416
NCA	St. Louis	MO	Minor Construction	Renovate old Maintenance Bldg/ Honor Guard area	1,918
NCA	Dayton	OH	Minor Construction	2,000-niche columbarium	2,380
NCA	Willamette	OR	Minor Construction	Replace maintenance bldg #3003	1,124
NCA	Mountain Home	TN	Minor Construction	Construct Admin/ PIC/ Maintenance Bldg (replacement)	4,000
NCA 2012 Total					55,472

*For planning purposes, VA utilized an established dollar amount for 2012 below which Administrations were not required to submit a Business Case for scoring. All NCA NRMs and Minor Construction projects under \$1 million are considered below threshold. All under-threshold projects were included in NCA's overall estimate as lump-sums.

**The projects listed above may be modified during execution at management discretion and consistent with SCIP process.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. The NCA 2013 - 2021 Cost Estimate Range does not include under-threshold or out-year planning estimates.

Table 4-5: NCA 2013-2021 Above Threshold Potential Projects (Sorted by State, by City, by Investment Type)

Chapter 8.5

Veterans Benefits Administration

Introduction

VBA provides benefits and services to the Veteran population through four areas (Eastern, Southern, Central and Western) and 57 regional offices. Benefits and services provided by VBA to Veterans and their dependents include compensation and pension, education, loan guaranty, and insurance. A map showing the four VBA areas is provided below.

Figure 5-1: VBA Area Map

Action Plan Strategy

VBA's 10-year Action Plan strategy focuses on workload and condition gaps indentified in the SCIP process. VBA's plan will reduce those gaps through co-location projects with VHA medical centers that result in "one stop shopping" for Veterans. Current leases, primarily through GSA also allow VBA to relocate quickly with business process changes, or with the renovation of existing claims processing centers.

VBA Gaps

Space Gap: Defined as additional space needed to support new FTE requirements in order to address workload gaps. Space gaps will be addressed primarily by major construction collocations (Little Rock, AR and Waco, TX) and minor construction projects..

Condition Gap: VBA – Currently VBA is facing FCA deficiencies in electrical, mechanical and structural systems. If implemented, the SCIP 10-year Action Plan will correct these deficiencies through minor construction projects by 2021. For more details see the following chart.

Table 5-1: VBA Condition Gap by System

System	Estimated Cost to Correct Identified FCA Deficiencies (000s)	Percent of Gap Filled by 2021
Electrical	\$500	100%
Mechanical	\$1,170	100%
Structural	\$3,277	100%
Total	\$4,947	100%

Energy

VBA addresses Departmental energy goals through a \$29.7 million investment in energy projects over the 10-year SCIP plan period.

SCIP Estimated 10-Year Magnitude Costs

The estimated 10-year estimated cost to correct all currently-identified gaps for VBA is approximately estimated to be between \$556 and \$692 million. This range is an estimate only; costs may change as projects are further refined.

Table 5-2: VBA Capital Investment Projects by Type

VBA	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	2	134
Leases	1	10	-	-
Minor Construction	6	15	19	50
NRM	N/A	N/A	N/A	N/A
Other ²	-	-	0	0
Project Specific Subtotal		\$25		\$184
Out Year Planning (Minors) ³	N/A	N/A	-	254
Below Threshold/ Emergent Needs ⁴	TBD	11	-	156
Total	7	\$36	21	\$593

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴The VBA Action Plans include under threshold lump sums for Minors below the established dollar threshold of \$250,000. For 2012, VBA has a lump sum, below threshold amount of \$11.3 million for emergent needs and below threshold Minor Construction projects and that will be identified during execution of the 2012 program.

Note: The funding requirements do not include the activation costs (funds needed to start up project –equipment, etc) nor do they include the recurring costs such as additional salaries or staff needed to operate facilities.

Table 5-3: VBA 2012 Above-Threshold* Potential Projects (Sorted by State, by City, by Investment Type)

Admin	City	State	Project Type	Project Name	Total Estimated Cost (\$000)
VBA	Little Rock	AR	Minor Construction	HVAC Replacement	550
VBA	Jackson	MS	Minor Construction	Service Center Realignment	401
VBA	Jackson	MS	Minor Construction	HVAC Modifications	620
VBA	Cleveland	OH	Minor Construction	Cleveland VARO FOB Renovation	9,600
VBA	Providence	RI	Minor Construction	Providence VARO Relocation to New GSA Leased Space	3,400

Admin	City	State	Project Type	Project Name	Total Estimated Cost (\$000)
VBA	Sioux Falls	SD	Minor Construction	HVAC Replacement	500
VBA 2012 Total					\$15,071

*For planning purposes, VA utilized an established dollar amount for project specific inclusion in the Action Plans. For example, in the Action Plans, the dollar threshold for VBA Minors is \$250,000. All under-threshold projects were included in the overall VBA estimate as lump-sums.

Table 5-4: VBA 2012 Potential Leases*

Admin	City	State	Project Type	Project Name	Total Estimated Cost** (\$000)
VBA	Providence	RI	Lease	Providence VARO Relocation to New GSA Leased Space	9,690
VBA 2012 Total Leases					\$9,690

*Lease/GSA Space Assignment projects are not included in the construction programs budget request because they are funded from individual Administration's and Staff Office operating accounts. The leases listed in the table above are expected to be awarded in 2012.

**Lease costs represent build out costs plus the annual unserviced rent for the loan period as given the SCIP Action Plan.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. The VBA 2013 - 2021 Cost Estimate Range does not include under-threshold estimates, or out-year planning estimates.

Table 5-5: VBA 2013-2021 Above-Threshold (\$250k) Potential Projects (Sorted by State, by City, by Investment Type)

Chapter 8.6

Staff Offices

Introduction

The Staff Offices are central, Departmental organizations with small but critical building and infrastructure needs. For the 2012 SCIP process, the Office of Information and Technology (OIT), the Human Resources Administration (HRA), the Office of Acquisition, Logistics and Construction (OALC), and General Counsel (GC) submitted 10-year Action Plans.

OIT Action Plan Strategy

A key component of OIT's SCIP plan is the request for 4 major leases to house new data centers as a part of the OI&T National Data Processing Strategy. With these new centers, OIT plans to improve operating efficiencies, and reduce energy use, costs and overall space needs. Additional minor construction projects are included in the plan to correct functional gaps, and leased space is incorporated to accommodate anticipated OIT employee growth and movement across the VA system. These projects will provide adequate space and remedy current deficiencies in the existing OIT portfolio.

OIT Gaps

Space Gap: Defined as additional space needed to support anticipated new FTE requirements. Currently OIT is facing a space gap of 356,000 sq ft. This gap will be corrected through the leasing of new space.

Condition Gap: Currently OIT is facing an FCA backlog of \$3.2 million which, according to its Action Plan, will be corrected by 2021.

Table 6-1: OIT Condition Gap

Location	Estimated Cost to Correct Identified FCA Deficiencies	Percent Gap Corrected
Austin	\$18,000	100%
Fort Worth	\$9,000	100%
Hines	\$3,133,000	100%
Philadelphia	\$11,000	100%
Total	\$3,172,000	100%

Energy

OIT addresses Departmental energy goals through a \$5.16 million investment in Minor projects over the 10-year SCIP plan period.

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for OIT is estimated to be between \$1.9 and \$2.3 billion. This range is an estimate only; costs may change as projects are further refined.

Table 6-2: OIT Capital Investment Projects by Type

OIT	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	0	0
Leases	-	-	9	2,026
Minor Construction	-	-	69	51
NRM	N/A	N/A	N/A	N/A
Other ²	-	-	0	0
Project Specific Subtotal		\$0		\$2,077
Out Year Planning (Minors) ³	N/A	N/A	-	40
Below Threshold/ Emergent Needs ⁴	TBD	TBD	-	2
Total	0	TBD	78	\$2,120

¹Total estimated costs provided in the table are preliminary planning costs and are considered to be the mean cost in a range of plus or minus 10 percent.

²Other projects include disposals, sharing projects, and enhanced use leases (EULs), etc.

³Out-year planning includes estimates for and minor construction, non-major leases, disposals, sharing, and EUL projects for years 2017-2021.

⁴ The OIT and Staff Office Action Plans include under-threshold lump sums for Minors below the established dollar threshold of \$250,000. For 2012, Staff Offices (including OIT) has a lump sum, below threshold amount of \$22.9 million for emergent needs and below threshold Minor Construction that will be allocated during the year.

Note: The funding requirements do not include the activation costs (funds needed to start up project –equipment, etc) nor do they include the recurring costs such as additional salaries or staff needed to operate facilities.

Total estimated costs provided in the table below are preliminary planning costs and are subject to change as projects are further refined. The OIT 2013 – 2021 Cost Estimate Range does not include under-threshold or out-year planning estimates.

Table 6-3: OIT 2013-2021 Above-Threshold Potential Projects (Sorted by State, by City, by Investment Type)

OIT	Falling Waters	WV	Minor Construction	Photovoltaic (PVs) Solar Panels	1,500
OIT 2013-2021 Cost Estimate Range: \$1.9B-\$2.3B					

HRA Action Plan Strategy

HRA's Action Plan includes additional space required to accommodate anticipated new VA Central Office (VACO) FTEs over the 10-year planning horizon. HRA's plan identified a need of an additional 50,000 square feet in both 2012 and 2013, based on the strategic space plan information that was provided by all VACO organizations. Approximately \$31 million in funding will also be requested in 2014 and 2015 to support GSA's build-out and modernization of VACO-occupied space in the Lafayette Building in Washington, DC. Alternate strategies to obtaining additional space such as telecommuting will also be fully explored prior to entering into additional space agreements. Future action plans will fully incorporate and comply with the recently passed telecommuting law

Public Law 111-292. Funding requested for minor construction is based on prior year spending with the addition of proposed special projects.

OALC Action Plan Strategy

OALC’s Action Plan focuses on the VA Facilities Management (VAFM) transformation initiative that will design and implement systems to support the enterprise. As part of the VAFM transformation effort, Constuction and Facilities Management (CFM) regional offices will expand in size and number of locations. This initiative will provide leased spaces for new regional offices in the following areas: Dallas, TX; San Francisco, CA; Chicago, IL; Atlanta, GA; Phoenix, AZ; and Fort Monmouth, NJ.

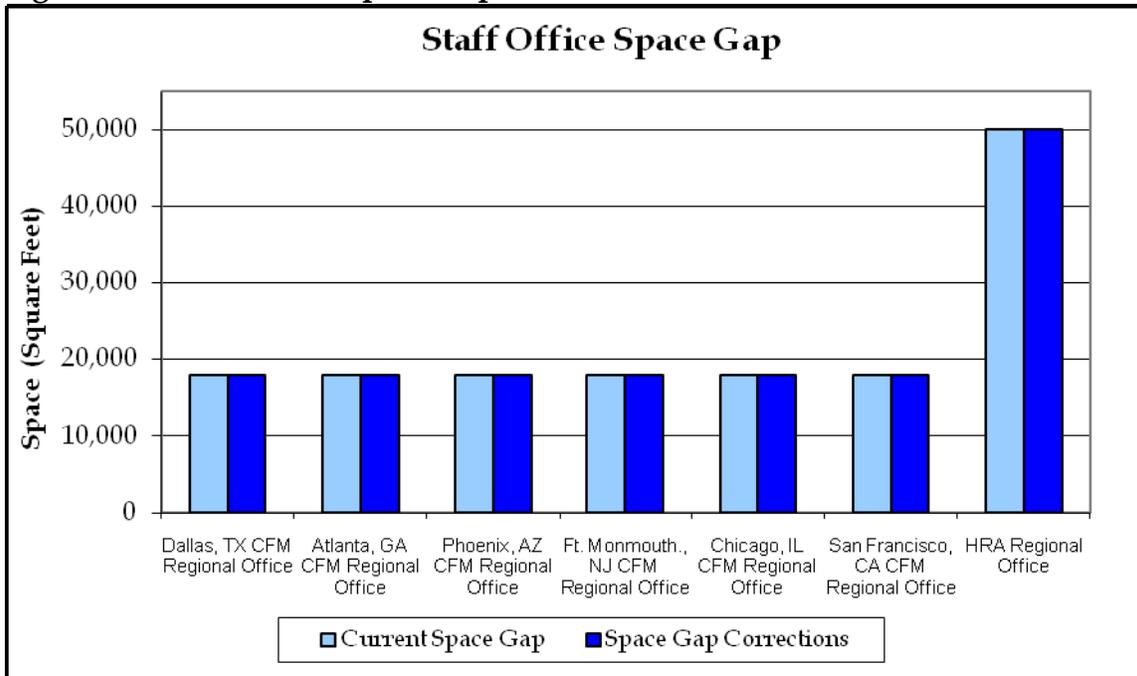

GC and Financial Services Center Action Plan Strategy

The GC and Financial Services Center’s Action Plan focus on minor construction projects that expand and upgrade computer rooms, administrative space and HVAC systems.

Staff Office Gaps

Space Gap: Defined as additional space needed to support anticipated FTE requirements.

Figure 6-1: Staff Office Space Gap

SCIP Estimated 10-Year Magnitude Costs

The cost to correct all currently-identified gaps for Staff Offices is estimated to be between \$80.6 and \$98.6 million. This range is an estimate only; costs may change as projects are further refined.

Table 6-4: Staff Office Capital Investment Projects by Type

Staff Offices	2012		2013-2021	
Project Type	# of Projects	2012 TEC (\$ in Millions)	# of Projects	2013-2021 TEC (\$ in Millions) ¹
Major Construction	-	-	1	31

Chapter 8.7

Other Capital Initiatives

Building Utilization Review and Reuse (BURR) Initiative

VA faces significant challenges in reducing its unneeded inventory because of building location, age, high repair costs, market conditions, and competing stakeholder interests. Despite these challenges, VA continues to make progress. Begun in 2010, BURR is an inter-departmental initiative designed to identify opportunities to reuse VA's vacant or underutilized buildings and land. The BURR process has identified 494 vacant or underutilized buildings in VA's inventory for potential repurposing. VA envisions the BURR process resulting in the development of housing options for Veterans and their families through public-private ventures and sharing agreements.

The BURR process is a key component of SCIP in that Action Plans are to consider repurposing of buildings and other development opportunities to prevent and reduce homelessness among Veterans and their families in order to reduce excess space. Action Plans can pursue these mutual objectives through partnerships with stakeholders, local communities, and public or private entities, including Enhanced-Use Lease (EUL). As SCIP moves forward, more candidates may be identified for reuse under EUL and other mechanisms as a result of the BURR process.

Potential BURR vacant and underutilized properties were included in the SCIP process and are included in SCIP action plans. Upon further analysis, properties that are found to be unsuitable for repurposing would most likely be disposed of.

Homelessness

As the eradication of homelessness among Veterans is one of the Secretary's key initiatives, the SCIP process calls for Action Plans to clearly indicate efforts undertaken to address the issue.

Energy/Greening VA

In order to move VA closer to meeting its energy and environmental objectives, SCIP identifies gaps in meeting energy efficiency, renewable energy, water conservation, and greenhouse gas (GHG) emissions reductions targets that are directly related to facility energy usage. Targets are based on executive orders

and legislation that mandates specific performance in these areas from Federal agencies. VA's key agency-level targets are to:

- Reduce energy consumption intensity by 3% annually through 2015
- Ensure that by 2013, 15% of electricity consumption is renewably generated
- Decrease water consumption intensity by 2% annually through 2016
- By 2020, reach a GHG emissions level (Scopes 1 and 2) that is 30% lower than 2008.

In addition to these targets, the Energy Policy Act of 2005, the Energy Independence and Security Act of 2007, and Executive Orders 13514 and 13423 require Federal agencies to achieve a variety of energy efficiency, renewable energy, alternative fueling, sustainable building and greenhouse gas emission reduction goals to protect the environment and reduce dependence on fossil fuels. Key mandates impacting construction projects are:

- Major construction must be 30% better than the relevant national standard for building energy efficiency and related cost savings¹. All Federal government construction projects must comply with sustainability, energy and water efficiency, and renewable energy requirements.
- Major construction projects must reduce fossil fuel-generated energy use 55% by 2010, 65% by 2015, 80% by 2020, 90% by 2025, and 100% 2030².
- Ensure all new construction/major renovation of all Federal buildings complies with the Federal High Performance and Sustainable Building (HPSB) guiding principles.
- Ensure at least 15% of the existing buildings (above 5,000 square foot) meet Federal HPSB guiding principles.
- Install at least one renewable fueling pump at each facility with a fleet fueling station by 2010.
- Annually, Increase 10% total fuel consumption that is non-petroleum-based from 2005 baseline.

VA/DoD Collaboration & Sharing

Since 1982, VA and the Department of Defense (DoD) have actively engaged in collaborative projects that have improved the delivery and reduced the cost of healthcare provided to Veterans and DoD beneficiaries. Further, In FY 2003, Public Law 107-314, Section 721 of the Defense Authorization Act required VA

¹ For VA, the relevant standard is ASHRAE 90.1-2007.

² Compared with Energy Star Target Finder.

and DoD to establish a joint incentive program to identify, evaluate and fund local, regional and national sharing initiatives. Partnerships continue to be developed to include joint ventures to construct or share medical facilities. For example, the joint venture between VA and DoD to provide Veterans with the full spectrum of healthcare services at Tripler Army Medical Center was largest joint venture at the time. In 2006, the VA-DoD Health Executive Council signed an agreement to integrate the North Chicago VA Medical Center and the Navy Health Clinic Great Lakes in to the new Federal Health Center. The \$118 million construction project includes a new federal ambulatory care clinic co-located with the North Chicago VAMC. This landmark agreement provides enhanced increased healthcare and access for Veteran and DoD populations and reduces federal health care costs through economies of scale.

To ensure improved management and performance across the Department, The SCIP process identifies capital projects that contribute to key major and supporting initiatives from the Department's strategic plan, including DoD collaboration. Additionally, all projects that clearly support enhanced/additional opportunities for DoD collaboration, were given appropriate weight in the SCIP scoring process using the Capital Investment Decision Model.

Page Intentionally Left Blank.

Chapter 8.8

Conclusion

Through its new and innovative Strategic Capital Investment Planning (SCIP) process, VA provides a comprehensive detailed plan to improve the delivery of services and benefits to Veterans, their families, and their survivors, with the safest and most secure infrastructure possible, by addressing VA's most critical needs first, investing wisely in VA's future, and significantly improving the efficiency of VA's far-reaching activities. SCIP also provides a plan to improve the quality, access, and cost-efficiency of the delivery of VA benefits and services through modern facilities that match the location and demands of Veterans, both present and future.

SCIP is an enhancement to VA's prior capital planning efforts and initiatives, and does not alter plans for existing projects that have previously received funding (in whole or part) from Congress. SCIP builds upon the solid foundation provided by VA's previous planning efforts, such as Capital Asset and Realignment for Enhances Services (CARES) process, by providing a true Department-wide approach to capital planning. SCIP integrates the Administrations' and Staff Offices' needs into VA's first-ever comprehensive and prioritized list of projects for budget consideration along with a 10-Year Capital Plan. SCIP addresses the Department's highest concern for Veteran/patient safety and security, and also aims to expand Veterans' access to services, to right-size VA's inventory, to mitigate environmental impacts, and to ensure the value of investments. All capital projects are considered in a uniform and consistent way which places emphasis on improving the delivery of services and benefits to Veterans, streamlining the efficiency of operations, and investing responsibly for the future. The SCIP action plan includes a rough estimate of the range in cost the Department will face to make all capital improvements identified in the 10-Year Action Plans to close existing gaps, and VA is looking to develop a methodology to incorporate activations (start up) and life cycle cost estimates in future plans.

A hallmark of the SCIP process is its data-driven approach, whereby the full extent of VA's infrastructure and its gaps in services (access, utilization, space, condition, energy, security and IT deficiencies) are captured, and a long-range Departmental strategy is developed to address and/or correct the identified gaps. In addition to adopting a more future-oriented view, SCIP is a more Veteran-

centric process approach because it places more emphasis on non-capital solutions to meet service delivery gaps.

Through the SCIP process, VA has formulated a rational and defensible plan to meet VA's capital investment needs. VA is committed to updating this plan each year, in order to capture changes in the environment, including evolving Veteran demographics, newly-emerging medical technology, advances in modern health care delivery, and in construction technology in a continuous effort to better serve Veterans, their families, and their survivors.

Chapter 9

VA Capital Program Initiatives

Capital Program Initiatives

VA has undertaken a number of capital program initiatives in order to improve and strengthen the capital asset management program. VA has integrated best practices into the fabric of the capital investment process, learning from the best planning and performance measurement found in government and private industry. One of the main achievements was the development of the Department's first long-term (5-Year) capital plan, which was submitted to Congress in the summer of 2004. Along with VA's vigorous capital investment process, the Department established various tools and programs as described below that support more effective capital asset management.

VA continues to develop tools and processes for managing its vast capital portfolio. Three key initiatives have served VA very well, and their promise is not yet exhausted. The first initiative is the Capital Asset Management System-Business Intelligence Tool (CAMS-BI), which continues to provide great assistance for all parts of the VA enterprise in monitoring their assets. Additional enhancements and functionality are constantly being tested and rolled out to leverage the investment VA has made in this enterprise system. The second major initiative is enhanced-use leasing, which fosters public-private partnerships while ensuring long-term revenue streams for the Department. Enhanced-use leasing supports community needs and job opportunities, and allows VA to transform underperforming or unutilized assets into revenue generators. The third initiative is the VA Energy Program which promotes and supports efficient energy management and increases energy and water conservation. Detailed descriptions of these tools follow.

Page Intentionally Left Blank.

Chapter 9.1

Enhanced-Use Leasing

Enhanced-Use Leasing Program

VA has a unique capital asset management tool called enhanced-use leasing (EUL).

Through VA's EUL program, partnerships are formed with private-sector developers to repurpose underutilized VA properties to meet a wide range of VA needs. These partnerships allow VA to offer expanded services to Veterans – for example, by creating supportive housing facilities for Veterans and their families; to generate substantial cost savings – for example, by facilitating campus realignment projects; and to help VA meet its sustainability goals – for example, by building on-site renewable energy facilities, thus enabling VA to reduce its greenhouse gas emissions.

The EUL program allows VA to support two major initiatives by matching supply (available buildings and land) and demand among Veterans for housing with third-party development, financing, and supportive services. This approach has the dual benefit of (1) supporting the Secretary's initiative to end homelessness among our Veterans while (2) leveraging an underutilized asset – which supports the President's federal real property initiatives.

The benefits of this program may include enhanced services to Veterans, operations and maintenance cost savings, attracting private investment, and new long-term sources of revenues as well as jobs and tax revenues for local, state and federal sectors.

Authority

Originally enacted in 1991, VA's authority to use this mechanism is codified in sections 8161 through 8169 of title 38, United States Code. In 2001, the authority was renewed for an additional ten years through 2011. This authority allows VA to lease land or buildings to public, private and/or non-profit sectors for up to 75 years, provided the use of the property is consistent with VA's mission. Leased property may be developed for non-VA uses, and/or VA uses that improve the property.

Although Congress chose to exempt VA's EUL authority from some federal property statutes to help provide flexibility in its application, VA must still abide by all federal environmental laws such as the National Environmental Policy Act, and the National Historic Preservation Act. VA is not required to follow standard federal acquisition rules when selecting an enhanced-use lessee, but VA must use procedures that ensure the integrity of the selection process and the fiduciary responsibilities of good stewardship.

Benefits to Veterans

Veterans enjoy access to an expanded range of services as a result of this program – services that would not otherwise be available on medical center campuses. One prominent example is Veteran housing. VA has utilized its EUL authority to develop housing projects that include both transitional and permanent supportive housing for Veterans who are homeless or at risk of homelessness, and independent and assisted living for senior Veterans. Other services available to Veterans as a result of EUL projects include hospice centers, mental health facilities, expanded parking, and child-care facilities, among others.

Benefits to VA

Use of this program has resulted in significant cost savings, repurposing underutilized capital assets and transferring the cost to construct and/or renovate, operate and maintain these properties to third-party partners. VA's EUL program is unlike those used by the rest of government, which offer little more than a revenue return in proportion to the depletion of the leased asset. VA's EUL program encourages innovative public/private partnerships. In return for the lease, VA must obtain fair consideration (monetary and/or in-kind) in various forms including but not limited to revenue, facilities, space, or services.

Generally, when an agency generates revenue connected to real property, proceeds must be deposited in the U.S. Treasury. Under VA's EUL program, funds received as consideration may be kept by VA. This return provides the incentive necessary to encourage VA property managers to be creative and aggressively pursue opportunities to partner with both private and non-profit entities.

Through this beneficial opportunity, enhanced-use leases provide VA partners with long-term access to underutilized VA building and/or land assets in exchange for consideration, which may take the form of a one-time payment, recurring revenue, and/or in-kind consideration, such as providing direct service to Veterans.

VA received the following revenues from 2005 to 2010, as a result of its enhanced-use leases:

- Recurring revenue with annual totals of:
 - \$1.1M 2010
 - \$1.4M 2009;
 - \$1.5M 2008;
 - \$1.1M 2007;
 - \$1.2M in 2006; and
 - Over \$900,000 in 2005.

- Additional one-time payments of:
 - \$2,000,000 in 2010
 - \$0 in 2009;
 - \$100,000 in 2008;
 - \$20,000 in 2007;
 - \$22.5M in 2006; and
 - \$28M in 2005.

Benefits to Developers and Local Community

An enhanced-use lease provides the developer (lessee) with the long-term property interest necessary to secure financing through the capital markets and amortize any capital investment made to the property or facility. Although the underlying land remains federal property, the facility is subject to state and local taxes, increasing the tax base for the local community. This increase to the tax base helps to support the local community's ability to provide needed services along with substantial private investment, new long-term sources of revenues for the local economy, jobs, and tax revenues for the local, state and federal sectors.

Transparency

A key component of the EUL program is close coordination with and involvement of the local government and community as full partners in the development process. As part of this partnership, VA holds public hearings at the location of any proposed enhanced-use lease to obtain input from local Veterans, as well as the general public. Through close collaboration with its stakeholders, community and local government partners, VA is able to address concerns early in the planning and development process of its projects. Additionally, VA provides notice to its Congressional oversight committees prior to entering into an enhanced-use lease.

Awarded Enhanced-Use Leases

VA has completed a variety of projects since the enactment of the EUL statute, including office buildings, parking facilities, low-cost senior housing, co-generation (heat and electricity) energy plants, single room occupancy housing (homeless shelters), and child care and mental health centers. A listing of enhanced-use leases that have been awarded since the inception of the program are included in appendix E.

Recent Enhanced-Use Lease Successes

Cleveland, Ohio - Campus Realignment/Mixed Use

VA's EUL program is providing VA with the means to consolidate and transform the two VA Cleveland campuses located 22 miles apart. The Wade Park (inner city) and Brecksville (suburban) campus realignment will improve access, quality of care and satisfaction to Northeast Ohio Veterans, and has already served to expand community partnerships and bring jobs and economic growth to Cleveland.

On October 1, 2009, VA executed an enhanced-use lease with the Veterans Development, LLC of the State of Ohio to finance, design and develop a parcel consisting of approximately 100 acres, which represents the entire Brecksville campus of the Louis Stokes Cleveland VA Medical Center (VAMC).

The redevelopment of the Brecksville campus will include more than 1.2 million square feet of private medical, higher education and business office space. In addition to the redevelopment of the Brecksville Campus, the redevelopment plan includes a transitional housing project for homeless Veterans, a parking structure and an administrative building adjacent to the Wade Park Campus.

Dayton, Ohio - Transitional Housing for Homeless Veterans

Volunteers of America partnered with VA through an enhanced-use lease to develop, renovate, construct, operate, and maintain Building 400 on the Dayton VA Medical Center campus. This transitional housing facility offers 50 units of transitional housing and supportive services for eligible Veterans and non-Veterans. Open for

operations in 2010, the facility is designed to provide safe, drug- and alcohol-free housing and supportive services to eligible Veterans and non-Veterans of the community. The lease will provide income consideration and result in utilities and maintenance cost savings and significant cost avoidance to VA by reducing reliance on inpatient and domiciliary resources.

Batavia, New York - Transitional Housing for Homeless Veterans

Anticipated to open for operations during the second quarter of 2011, this enhanced-use lease project is designed to provide safe, supportive, and affordable housing to homeless Veterans. The proximity to the Medical Center campus ensures easy access to treatment and services to support recovery and improved life opportunities. The 40-year enhanced-use lease with the Cazenovia Recovery Systems

Corporation provided for the development, construction, financing, design, operations, repair, and maintenance of a transitional housing facility consisting of 7 two-bedroom units and 4 one-bedroom units for a total of 18 beds in Ward A of Building 1 at the Batavia VA Medical Center (VAMC). The completion of this project will yield cost savings for the VA Western New York Healthcare System – Batavia Division for utilities, maintenance and cost avoidance from the reduction in the number of inpatient psychiatric and residential rehabilitation episodes of care.

Mission Homeless and Site Review

In 2008, VA launched a site review initiative with the objective of conducting a comprehensive review and assessment of VA's infrastructure and capital asset inventory to decrease the amount of underutilized real property, maximize its value, and address the ongoing problem of homelessness among Veterans through public/private partnerships and VA's EUL program. The outcome of this initial undertaking (Mission Homeless), evolved into a broader effort to repurpose unused VA properties to develop new housing opportunities for an expanded group of Veterans and their families.

The next generation initiative, Building Utilization Review and Repurposing (BURR), takes a step further by expanding the types of housing to include Veterans returning from modern warfare and elderly Veterans. The Department's EUL authority allows VA to match supply (available buildings and land) and demand among Veterans for housing with third-party development, financing and supportive services. This approach has the dual benefit of helping to reduce homelessness among Veterans while leveraging an underutilized asset and transferring the operations and maintenance costs to a housing developer.

Building Utilization Review and Repurposing (BURR)

As an expansion upon the Mission Homeless effort, VA began a review of all buildings and properties with the objective of finding all possible reuse opportunities. The major focus of BURR has been on identifying sites for permanent housing of Veterans. In identifying housing for Veterans, need has been captured in three major categories: housing for Veterans who are homeless or at risk of homelessness; senior Veterans capable of independent living and Veterans requiring assisted-living and supportive services, including polytrauma and traumatic brain injuries.

Phase I: The first phase of the process included a data-base systems review of all properties to identify campuses with buildings and land that were either vacant or underutilized. The list of campuses with potential properties was then validated through responses from the field to questionnaires. Phase I identified 48 medical center campuses for further analyses and potential site visits.

Phase II: The second phase of the BURR process included (a) site visits and (b) a market assessment of each site to match the supply of buildings and land with the demand for services and the availability of financing. This phase incorporated data from the 2009 VA CHALENG report, the Point-In-Time (PIT) report produced by the Department of Housing and Urban Development, and data from VA Medical Center admittance statistics to determine the demand for the three types of housing, measured against the existing supply of each housing type in the region. Additionally, research was conducted to assess the availability of financing for projects from both public and private sources to gauge the financial feasibility in each market for further development. At the conclusion of Phase II, the BURR initiative had identified 259 buildings and approximately 1,200 acres on 34 VA campuses for future potential development opportunities.

Phase III: The third phase of the BURR process is to move forward with the development of the identified campuses using VA's EUL authority. If no repurposing need is identified via BURR, VA will right-size its vacant capital asset inventory by demolishing or disposing of buildings that are unsuitable for reuse or beyond their useful life.

Enhanced-Use Leasing Authority Sunsets at the End of 2011

On December 31, 2011, VA's EUL authority will expire. VA remains committed to this important program and will continue to leverage the authority to effectively manage its inventory of underutilized properties, negotiate in good faith and enter into EUL projects beneficial to Veterans, VA, the federal government, state and local communities, and American taxpayers. A proposal to address the expiration will accompany the Department's legislative package submitted through the President's program.

Chapter 9.2

Green Management Program

Background

Executive Order (EO) 13423 - Strengthening Federal Environmental, Energy and Transportation Management, enacted January 2007, raised the bar on the energy requirements contained in the Energy Policy Act of 2005 and mandated environmental and fleet management improvements. The Energy Independence and Security Act (EISA) of 2007 translated many of the requirements of EO 13423 into law, and imposed significant new requirements in the areas of energy efficiency and sustainable buildings. EO 13514 - Federal Leadership in Environmental, Energy, and Economic Performance, signed in October 2009, built on previous requirements and mandated that federal departments inventory greenhouse gas (GHG) emissions and set reduction targets. In order to best address these new requirements and maintain its place as a federal sustainability leader, VA integrated its Department-level energy, environment, transportation and sustainable buildings policy and program offices in 2003 to form the Green Management Program office within the Office of Asset Enterprise Management (OAEM). OAEM continues to lead the program and policy office in all VA Department-level initiatives dealing with energy, environment, transportation management and sustainable building initiatives.

Roles and Responsibilities

OAEM chairs four Department-wide taskforces, each of which addresses our primary areas of sustainability: energy, environmental, transportation/fleet management, and sustainable buildings. Each taskforce has developed an action plan that serves as VA's blueprint for fulfilling federal mandates and meeting internal goals in their respective subject area. The action plans list activities that VA needs to accomplish in order to meet performance measures, and includes deliverables, responsible parties, deadlines, and resource requirements for each activity. Taskforce members actively coordinate and oversee implementation of their respective plans, and interact with members of the other taskforces on cross-cutting issues. An action featured in each plan is for the Department to update/create their task forces' programs, policies, directives, and handbooks to reflect current mandates and lessons learned from implementing existing programs. OAEM also leads a Greening VA Working Group to promote employee greening efforts in the workplace. OAEM also leads a Greenhouse Gas (GHG) Emissions Advisory Group to support VA's

participation in the federal road test of the Public Sector Protocol for measuring GHG emissions completed in 2010.

VA participates actively in federal inter-agency working groups and related subgroup meetings in all four areas, including: the Inter-Agency Energy Management Taskforce; the Interfuels Working Group; the Federal Energy Savings Performance Contracting (ESPC) Steering Committee; the Federal Electronics Stewardship Working Group; the Inter-Agency Sustainability Working Group; the Interagency Environmental Leadership Working Group; and others. Participation includes activities such as reviewing and commenting on proposed guidance documents; participating in initiatives by furnishing VA-specific data, experiences and viewpoints; and providing input on proposed legislation, executive orders and other documents. VA co-sponsors GovEnergy, the premier energy training workshop and tradeshow of federal agencies, and serves on the planning committee for the Federal Environmental Symposium, which hosted GreenGov in 2010.

Data and Reporting

The green management program within OAEM exists to support the VA administrations with achieving required environmental and energy measure through departmental policy, guidance, regulatory oversight, initiatives, and data reporting.

VA Required Reporting Measures

Table 9-1 lists the reporting measures and target decreases mandated by the Energy Policy Act of 2005; Executive Order 13423 - Strengthening Federal Environmental, Energy and Transportation Management; Energy Independence and Security Act of 2007; and Executive Order 13514 - Federal Leadership in Environmental, Energy, and Economic Performance.

Table 9-1: VA Required Reporting Measures

VA Green Management Program Measures	Target (%)	Baseline Year	Target Year
Renewable Electricity Consumption (mandate)	7.5	No Baseline	2013
Traditional Energy Consumption Decrease	30	2003	2015
Sustainable Design Practices in the Guiding Principles	15	2009	2015
Greenhouse Gas Emission Scope 1&2 Decrease	29.6	2008	2020
Greenhouse Gas Emission Scope 3 Decrease	10	2008	2020

The baseline year is the year that is the base for measurement and the target year is the year the VA is required to meet the target decrease. Renewable electricity consumption and renewable energy consumed do not have a baseline year because the measures are total Department percentages. Descriptions of each energy measure are listed below:

Renewable Electricity Consumption: Percent of total facility electricity consumption that is renewable

Traditional Energy Consumption Decrease: Cumulative percentage decrease in facility traditional energy consumption per gross square foot from the 2003 baseline

Sustainable Design Practices in the Guiding Principles: Percent of above-threshold buildings square footage in inventory that incorporate the sustainable design practices in the guiding principles

Greenhouse Gas Emissions Scope 1 & 2: Cumulative percent decrease in Scope 1 and Scope 2 greenhouse gas emissions

Greenhouse Gas Emissions Scope 3: Cumulative percent decrease in Scope 3 greenhouse gas emissions

The table below outlines the progress of the VA towards achieving the target percentage by the target year. Energy measures where the year listed is prior to the baseline year have “N/A.”

Table 9-2: VA Reporting Measure Results 2006-2010

VA Green Management Program Measures Results (% by Fiscal Year)	2006	2007	2008	2009	2010
Renewable Electricity Consumption (mandate)	3	3.4	4.1	5.3	7.0
Traditional Energy Consumption Decrease	4	7.6	11.4	12.3	12.7
Sustainable Design Practices in the Guiding Principles	N/A	N/A	N/A	13.6	13.6
Greenhouse Gas Emission Scope 1&2 Decrease	N/A	N/A	N/A	N/A	3.3
Greenhouse Gas Emission Scope 3 Decrease	N/A	N/A	N/A	N/A	15.4

Table 9-3 outlines the VA’s internal benchmarks towards achieving the target percent by the target year. During 2012 VA is expecting the renewable energy projects funded through the American Recovery and Reinvestment Act (ARRA) to begin generating renewable energy thus helping the VA to achieve the renewable energy percentage targets by 2013.

Table 9-3: VA Reporting Measure Planned Targets 2010-2015

VA Green Management Program Measures Planned Targets (% by Fiscal Year)	2010	2011	2012	2013	2014	2015
Renewable Electricity Consumption	5	5.5	6	7.5		
Renewable Energy Consumed	5	5.5	6	15		
Traditional Energy Consumption Decrease	15	18	21	24	27	30
Sustainable Design Practices in the Guiding Principles	13.5	13.8	14.1	14.4	14.7	15

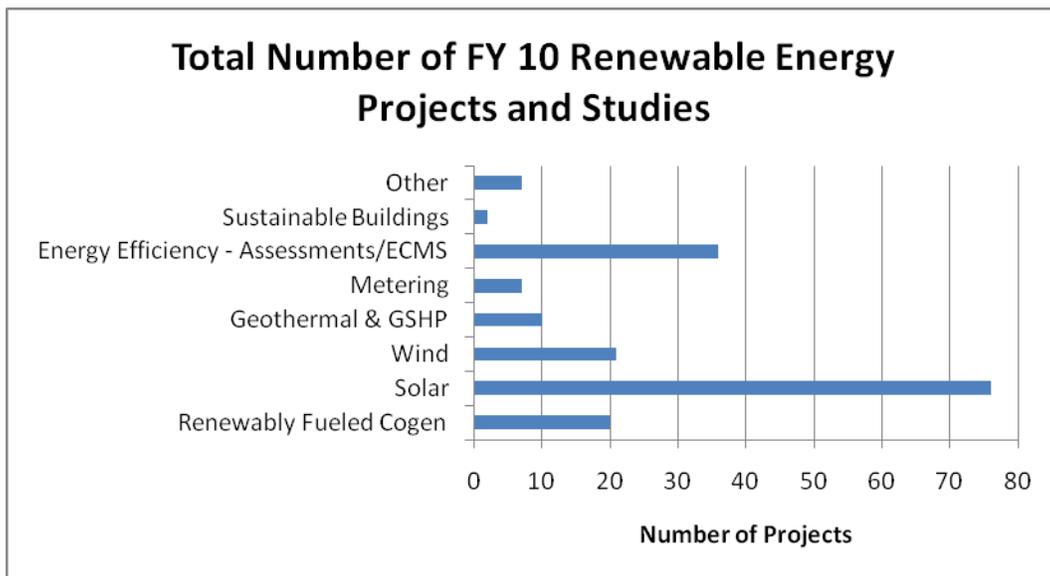

The most recent reporting measures are the greenhouse gas emissions. Executive Order 13514 – Federal Leadership in Environmental, Energy, and Economic Performance required federal agencies to inventory and decrease greenhouse gas emission department wide by 2020. The VA is a leader among federal agencies with one of the most aggressive target reductions for scopes 1 and 2 greenhouse gas emissions. Table 9-4 outlines the VA’s internal benchmarks towards achieving the target percent by the target year. The yearly benchmarks for greenhouse gas emission reduction are credited to increases in renewable energy consumption and decreases in traditional energy consumption.

Table 9-4: Greenhouse Gas Emission Planned Targets 2011-2020

Greenhouse Gas Emission Planned Targets (% by Fiscal Year)										
VA Green Management Program Measures	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020
Scope 1 & 2	1	2	5	7	11	19	22	25	27	29.6
Scope 3	0.5	0.5	1	4	5	6	7	8	9	10

VA is able to achieve mandated reporting measures through the implementation of renewable energy and energy efficiency projects. VA has implemented solar, wind, geothermal and renewably fueled cogeneration projects, and is concurrently conducting and reviewing a number of feasibility studies for on-site renewably fueled energy generation to evaluate and recommend renewable energy project options for inclusion in future construction projects. VA will continue its commitment to identify opportunities to increase renewable energy consumption.

Figure 9-1: Numbers of FY10 Renewable Energy Projects & Studies

Energy Data Collection and Reporting

Accurate data collection is essential to conducting a meaningful performance analysis. In 2010, the Department of Energy (DOE) consolidated the energy and greenhouse gas reporting requirements into the Annual GHG and Sustainability Data Report. The additional data request required the VA to expanded energy data collection to include elements specifically for greenhouse gas emission reporting. One element added to CAMS specifically for greenhouse gas data

reporting are Generation Resource and Integrated Database (eGrid) regions, the system in which the Agency's greenhouse gas emissions will be calculated. VA now has the capability to perform performance analysis by eGrid.

The VA is able to achieve the mandated energy target goals through data collection and continuous performance analyses. VA continues to provide energy information to DOE as required under the Energy Independence and Security Act of 2007 (EISA) and actively participates in a DOE working group that developed guidance for collection of data on the results of mandated facility energy assessments. VA is one of the few agencies to have all facilities online and active in the EPA Energy Star Portfolio Manager program and continues to implement the automated benchmarking process initiated in 2006. Using online tools and computer programming, VA in 2009 continued quarterly energy benchmarking of its hospitals and regional benefits office facilities via this process. VA includes renewable energy data in the Annual GHG and Sustainability Data Report. The data is collected directly from the medical facilities participating in renewable energy generation.

Sustainable Building Data Collection and Reporting

VA gathers assessment data on the level of sustainability of existing buildings via an annual in-house survey effort. Facilities use the survey results, along with any certifications they have earned (LEED or Green Globes), to report on sustainable building status in CAMS. Additionally, one element of the Federal Real Property Council Report is building sustainability.

Greenhouse Gas Data Collection and Reporting

VA currently working to meet its greenhouse gas reduction targets (see Table 9-1). The GHG reduction target is an informed estimate based largely on projected achievement of current statutory mandates, including the energy efficiency and renewable energy requirements of the Energy Independence and Security Act of 2007 (EISA) and the Energy Policy Act of 2005 (EPAct). VA will submit its first GHG inventory in January 2011.

Environment Program Data Collection and Reporting

VA enters data on its environmental management systems (EMS) into an inter-agency database located on the FedCenter website, which calculates a score for each EMS. VA supplies information annually to The White House Council on Environmental Quality (CEQ) related to environmental conflict resolution efforts. VA collects data for the annual "EO 13423 Sustainable Practices: Green Purchasing, Waste Management, and Chemicals Management" report via an in-house automated survey tool. As the report requirements change, VA edits the survey tool to reflect what is needed. Collecting and tracking green product purchasing and waste management data continues to present challenges for VA,

as for all federal agencies. VA reports quarterly to CEQ on the National Environmental Policy Act (NEPA) status of VA projects funded by the American Recovery and Reinvestment Act of 2009 (ARRA). As required by EO 13514, VA has established targets for greenhouse gas (GHG) emissions reduction (See Table 9-4), and submitted its Strategic Sustainability Performance Plan to CEQ and Office of Management and Budget (OMB).

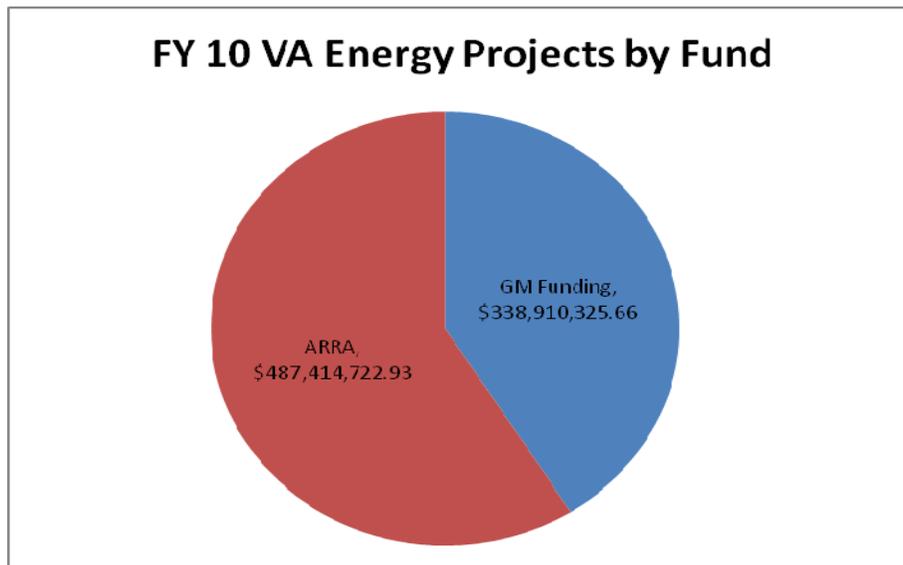

Transportation Data Collection and Reporting

VA enters key fleet vehicle data into an inter-agency database – the Federal Automotive Statistical Tool (FAST) database – and is able to view and report on the data using FAST analytical tools. This data forms the basis for VA’s annual fleet vehicle report to Congress. In addition, VA uses an internal database to track key information about VA fleet vehicles around the country. VA participated in the GSA Federal Fleet Management Program (FFMP) with the intention of adopting the FFMP software when it became available. GSA activated the first phase of FFMP software on November 1, 2009, and VA expects to mandate its use as the primary Departmental data collection system. VA was one of the first agencies to provide initial data for testing GSA’s comprehensive new Federal Motor Vehicle Registration System (FMVRS) in 2008, and continued in 2009 to work with GSA to finalize vehicle data and improve the database.

Budget

In 2010, VA obligated slightly more than \$826 million in renewable energy and energy related projects to expand its renewable energy portfolio, implement energy efficiency projects, and install energy and water meters to meet federal mandates through the Department-level Green Management Program (GM).

Figure 9-2: 2010 VA Energy Projects by Fund

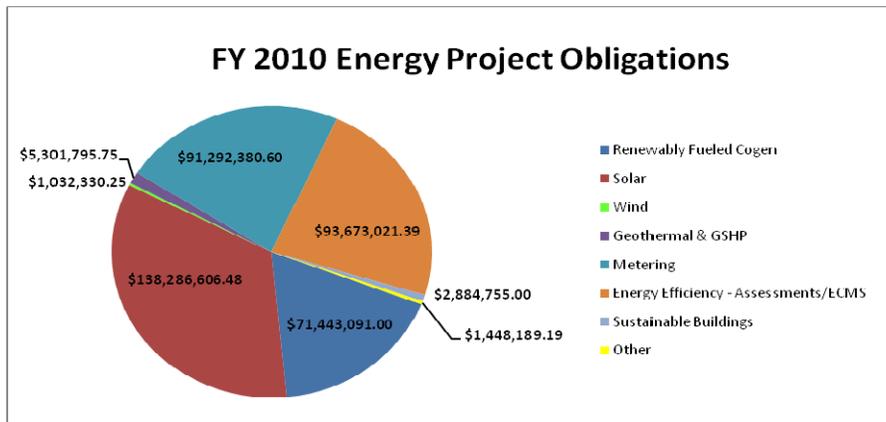

Utilizing ARRA and Green Management funding, VA obligated 718 projects. 179 (\$405 million) focus on renewable energy and 539 (\$421 million) focus on improving energy and water efficiency at VA facilities.

Table 9-5: 2010 VA Energy Project Awards

Energy Program	Actual	No. Projects/Studies
Renewably Fueled Cogeneration	\$71,443,091.00	20
Solar	\$138,286,606.48	76
Wind	\$1,032,330.25	21
Geothermal & Ground Source Heat Pumps	\$5,301,795.75	10
Metering	\$91,292,380.60	7
Energy Efficiency - Assessments/ECMS	\$93,673,021.39	36
Energy Efficiency Improvements	\$420,962,878.93	539
Sustainable Buildings	\$2,884,755.00	2
Other	\$1,448,189.19	7
Total	\$826,325,048.59	718

In 2010, VA obligated \$405 million in renewable energy, metering, energy efficiency, and sustainable building projects. The figure below details the obligations by energy technology.

Figure 9-3: 2010 Energy Obligations by Type

Renewable energy funding addresses all areas of project development, from conducting detailed technical and economic feasibility studies through construction and commissioning. Types of renewable energy projects include studies and/or implementation of solar photovoltaic, wind turbine, direct geothermal, ground source heat pump, and renewably fueled cogeneration systems. Energy and water conservation measures (ECMs) were implemented at

many of our facilities and select national cemeteries. These ECMs, identified in previously conducted facility energy assessments, will improve the performance and efficiency of heating, cooling, lighting and water-using systems to achieve savings that will go back into providing services for Veterans.

The 539 energy-related projects include window replacements; replacements of aging heating, ventilation and air conditioning systems and components; boiler system upgrades; installation of variable speed drive motors; water conservation measures; solar and wind energy projects; and others.

In 2011, VA is maintaining energy manager positions and adding energy and environmental expertise; undertaking to certify additional existing buildings as sustainable; implementing wind, solar, geothermal and cogeneration projects; conducting additional feasibility studies for renewably fueled on-site energy projects; and ensuring that all owned facilities are implementing metering for natural gas, steam, and water.

VA's 2012 budget includes \$144 million in Medical Care to continue the improvements of the Department's ability to better manage its energy, environmental and fleet assets, most of which is directed to renewable energy initiatives, energy efficiency improvements, and sustainable building improvements. Improvements will also be accomplished by making prudent investments in infrastructure, employing best practices in facility and fleet operations and maintenance, and improving data collection and analysis.

Table 9-6: VA Green Management Program Budget Summary 2010-2012

Activity	2010 (Actual)		2011	2012
	GM Funding	ARRA	Planned	Planned
Renewably Fueled Cogeneration	6,090,455	65,352,636	59,594,000	20,625,000
Solar	112,965,613	25,320,994	51,150,000	27,400,000
Wind	185,819	846,511	10,440,000	14,340,000
Ground Source Heat Pump/Geothermal	675,988	4,625,808	19,950,000	-
Renewable Energy Certificates			1,600,000	2,200,000
Renewable Energy Program Total	119,917,875	96,145,948	142,734,000	64,565,000
Metering	14,471,945	76,820,435	-	-
Energy Assessments & Measures	63,216,236	30,456,786	9,763,000	9,055,000
<i>Energy Efficiency Projects (NRM)*</i>	420,962,879	283,774,723	93,008,000	41,523,000
Sustainable Buildings	2,884,755		2,000,000	1,000,000
Environmental Studies & Projects	279,254		1,892,000	4,704,000
Fleet Projects and Studies			2,732,000	2,841,000
Other	231,959	216,831	-	-
Env, Fleet, and Sus Program Total	502,047,028	391,268,775	109,395,000	59,123,000
Environmental Managers			2,757,000	2,840,000
Energy Engineers			14,420,000	14,853,000
NEBC Operations	720,146	-	3,090,000	3,183,000
Staffing Total	720,146	-	20,267,000	20,876,000
Total Capital & Staff	622,685,049	487,414,723	272,396,000	144,564,000

* (NRM) Energy Efficiency Projects for the FY 10 Budget (\$ 420,962,879) and ARRA (\$ 283,774,723) are also shown in Volume 2

Highlights and Accomplishments

VA is making great strides in conserving resources at its facilities across the country by proactively managing its energy, environmental, fleet and sustainable building efforts. VA has been a leader in promoting energy conservation and reducing its environmental footprint by investing in renewable energy technologies such as solar panels, wind turbines, geothermal systems, and renewably-fueled central energy plants. VA recently established an ambitious goal of reducing our greenhouse gas emissions by 30 percent by 2020.

Energy

Energy assessments: VA continues to conduct facility energy assessments on a rotating regional basis, and is pursuing implementation of energy conservation measures (ECM) identified during the assessments. In 2009, VA completed region-wide facility energy assessments in VISNs 3, 4, 7, 8, 9, and 12

(approximately 25 percent of its building inventory), and continued procurement planning and implementation for ECMs identified previously in other VISNs. As of 2010, VA has completed the first round of energy assessments at all of its facilities. In 2011, VA plans to begin a second round of assessments to facilities to determine any needed energy upgrades.

Advanced metering: In 2009, VA awarded a contract to install 1,600 advanced electric metering at VA facilities nationwide through the VA National Energy Business Center (NEBC) in Cleveland, OH. Once the meters at a particular facility are functional, the VA energy engineer serving the facility will be able to monitor and analyze the data to help identify both problems in energy consumption and opportunities to control costs and become more energy efficient. In 2010, VA awarded a contract for metering steam, natural gas and water consumption, with implementation funding through ARRA. These 3,000 utility meters are currently being designed. Additionally, all metering data (electric and utility) will be sent to a centralized website for data analysis and monitoring.

Renewably fueled energy plants: VA awarded six contracts under the ARRA to design and install five renewably fueled energy plants and one fuel-cell energy system. VA is currently in the design phase for renewably fueled energy plants at: Togus (ME) VA Medical Center (VAMC), White River Junction (VT) VAMC, Chillicothe (OH) VAMC, Murfreesboro (TN) VAMC, and Canandaigua (NY) VAMC. Additionally, VA has awarded a contract for a fuel-cell powered energy plant at the Jerry L. Pettis Memorial VAMC in Loma Linda, CA. These sites were selected based on completed feasibility studies that evaluated the potential for renewably fueled energy plants at 38 VAMCs in 15 states and Puerto Rico. Renewable fuels under consideration include methane gas from landfills (biogas) and agricultural waste such as decaying trees and landscape waste, scrap wood, wheat or corn stalks (biomass). VA is continuing to assess the potential for updating existing energy plants to incorporate combined heat and power, or cogeneration, technologies, with 13 feasibility studies awarded in 2010. Cogeneration is an energy efficient system that simultaneously produces electricity and steam, hot water or chilled water. The findings will aid VA in determining the most ideal locations for spending funds wisely to build renewably fueled energy plants, while ensuring cost savings in the long run.

Solar generation: In 2010, VA awarded 21 solar photovoltaic (PV) design-install projects at 17 medical centers and four cemeteries based on the feasibility study performed in 2009-2010.

Prior to 2010, VA awarded contracts to install solar PV systems at 18 VA medical centers located in eight states and American Samoa. Some of these systems are

operational, and primarily located on rooftops, but in some cases they will be placed over parking lots or ground-mounted.

Solar projects implemented at VA facilities yield energy cost savings, reduce reliance on fossil fuels, and provide environmental benefits including reduction of greenhouse gas emissions. These projects have a direct impact on VA's mission by enhancing the Department's fiscal responsibility and environmental stewardship.

Wind Power: VA has awarded a total of four wind turbine systems. In 2009, VA awarded a contract to a small business for a 600 kilowatt wind turbine at St. Cloud (MN) VA Medical Center. The American-made turbine is expected to provide up to 16 percent of the facility's annual electricity use, and will be completed in spring 2011.

In 2010, VA award and completed a wind turbine project, awarded to a service-disabled Veteran-owned small business contractor, at the Massachusetts National Cemetery in Bourne, MA. The 50 kilowatt turbine is expected to produce up to 97 percent of this cemetery's annual electricity usage, and installation was completed in August 2010. Additionally, VA awarded a 10 kilowatt wind turbine for the Manhattan Campus of the NY Harbor VA Healthcare System and a 20 kilowatt turbine for the Salt Lake City Healthcare System. Both wind projects will be completed in 2011.

Geothermal: VA awarded a contract using ARRA funds for geothermal feasibility studies. The studies were performed at seven VA medical facilities and were used to help VA determine the most ideal locations for investments in on-site renewable energy projects, such as geothermal systems. Upon completion of the studies, VA selected the most beneficial project sites for implementation using funds from the ARRA and other sources. Based on the studies, VA plans to award up to 14 contracts for geothermal systems, and will continue exploration of this technology with 10 additional feasibility studies.

In 2009, VA used ARRA funds to award a ground-source heat pump system at St. Cloud (MN) VA Medical Center. This geothermal system will provide up to 19 percent of the facility's annual electricity use, and will be completed in spring 2011.

Geothermal technology captures energy from within the earth to provide heating, cooling and electricity to facilities. These energy efficient technologies can reduce energy consumption and decrease greenhouse gas emissions into the atmosphere.

Environment: VA continues to improve its approach to managing the multiple aspects of environmental stewardship, from purchasing more “green” products to enhancing recycling and waste reduction efforts. VA is identifying additional facilities for environmental management system (EMS) implementation, with supporting implementation of EMS at all National Cemetery Administration sites nationwide. The Green Management Program provided green purchasing and EMS training for VHA’s Green Environmental Management Systems (GEMS) basic training courses.

Transportation: To increase its use of alternative fuels, VA conducted a national study to select the best existing sites for installing alternative fueling capability and to develop concept-level fueling station design. About 90 stations will be built with funding already dedicated within VA’s minor construction program. VA continues to focus on training of all relevant staff to understand fleet management and data collection requirements. While improving use of its existing internal fleet vehicle database, VA is simultaneously participating in the Federal Fleet Management System pilot program with the intention of adopting the vehicle management information system (VMIS) software when it becomes available. This software will allow VA to better track its vehicle inventory.

Sustainable Buildings: VA proactively developed a Green Buildings Action Plan prior to the mandate for all federal agencies to develop a sustainable building implementation plan (SBIP), and has had a Sustainable Design and Energy Reduction Design Guide applicable to all new construction and major renovation projects in effect since 2007. With the SBIP in place, VA aggressively pursued sustainability in existing facilities via a nationally coordinated initiative to earn third-party sustainable building certification at 21 facilities around the country. VA accomplished this goal with 25 “green building” certifications and achieved 13 percent sustainable space. Of these 25 certifications, some cover campus-wide certification, and VA can confirm that it has over 250 individual buildings agency-wide certified as a “green” building. In 2010, VA awarded an additional contract for registration for third-party certification at all VA medical facilities. Currently, VA has 30 EnergyStar labeled medical facilities, which accounts for over 25 percent of the U.S. hospitals listed in the EnergyStar Portfolio Manager.

Outreach: VA launched a new employee green awareness campaign, the *Green Routine*, in October 2009. The Green Routine initiative, administered by the Greening VA Working Group, provides the necessary information and resources to educate all employees on how they can take advantage of the daily opportunities to create a healthier work place and help VA meet its energy and environmental mandates. The Greening VA Working Group created an informational video, a webpage, and an instructional guide to going green in the workplace.

In 2010, the Green Routine launched an awards program that provides Department-level recognition to VA employees and facilities who have developed, initiated, and/or significantly contributed to grassroots efforts, outside of their daily duties, to instill and encourage green, sustainable practices at their workplace. In its inaugural year, the awards program received 50 submissions from VA employees across the country, showcasing their grassroots efforts to “green” our Department.

Recognition: VA has won recognition in a variety of sustainability categories, which showcases our ability to excel in all our areas of green management for VA.

The Department of Energy (DOE) selected a VA project to receive a 2010 Federal Energy and Water Management Award in the individual’s category for implementation of an efficient energy, water, and fleet management program. DOE recognized Paul Morgan’s accomplishment as the energy manager for VISN 7 for his comprehensive VISN 7 Energy Management Policy; the Network Reduction Plan, which utilizes tools for performing energy audits and assessments; the development of a VISN 7 Energy Dashboard; and attained 3 *Green Globes* certification of three medical centers in his region.

The Federal Environmental Executive recognized the Department of Veterans Affairs for its electronics stewardship efforts at the 2010 Federal Electronics Challenge (FEC) Awards ceremony. FEC Bronze-level awards went to the Oscar G. Johnson VA Medical Center (Iron Mountain, MI) and the Illiana Health Care System (Danville, IL). Both facilities received the awards for their efforts in environmentally sound management of electronic assets at end-of-life. They are helping VA to meet electronics stewardship goals established in Executive Order 13514: Federal Leadership in Environmental, Energy, and Economic Performance and addressed in VA’s Strategic Sustainability Performance Plan. The FEC is a partnership program that encourages Federal agencies to purchase greener electronic products, reduce the impacts of electronic products during use, and manage used and obsolete electronics in an environmentally safe way.

The White House recognized the Martinsburg (WV) VA Medical Center as a recipient of the 2010 GreenGov Presidential Awards for its *Green Kitchen* project, which focuses on waste tracking, composting, and improving business operations. The medical center received the Good Neighbor Award, which recognizes a Federal agency facility for its exemplary application of engagement with local and regional communities to promote the sustainability goals of EO 13514. Winners of this award have actively pursued and established collaborative sustainability goals and successfully aligned practices with community partners to achieve these goals.

Future Plans

Through VA's Green Management Program, VA is planning and executing the following projects through 2012:

Renewably Fueled Energy Systems: Design and construct renewably fueled energy systems (combined heat and power systems that can use biogas or biomass fuels) at five previously identified VAMC; design and construct a fuel cell energy system at one medical center; and complete feasibility assessments at 13 sites for potential implementation of additional renewably fueled energy systems.

Solar Photovoltaic: Design and install solar photovoltaic projects at 17 medical centers and 4 national cemetery sites.

Wind: Install a wind turbine at one medical center; and design and install wind turbines at two medical centers..

Geothermal: Install a ground source heat pump at a previously identified site; design and install geothermal systems at 14 sites previously identified through feasibility studies; evaluate ten facilities for feasibility of direct geothermal projects; and install direct geothermal systems at selected sites.

Metering: Install building-level meters for natural gas, steam, water and other utilities to meet federal metering mandates.

Summary Program Plan Through 2012

- Energy:
 - Continue identification and implementation of on-site renewable energy projects
 - Continue implementing building-level metering at all VA facilities through national program
 - Invest in energy and water efficiency improvements
 - Add alternative fueling capability to targeted sites
 - Increase renewable energy consumption to 15 percent of total electricity used by 2013

- Environment:
 - Continue to implement Environmental Management Systems at all appropriate levels
 - Evaluate and pursue opportunities to institutionalize green product purchasing throughout VA
 - Evaluate options for tracking and reporting VA implementation of electronics stewardship goals

- Evaluate options for tracking and reporting recycling activities
- Develop, conduct and promote environmental training and awareness
- Develop tracking and reporting system for NEPA activities

- Outreach:
 - Continue to implement employee awareness campaign in the workplace to all VA employees.
 - Update and implement the “Green Routine Awards” program to recognize VA employees’ grassroots efforts to green VA
 - Expand webpage to an intranet site to host forums for employee on greening efforts and discussions

- Transportation:
 - Finalize Department-level fleet management directive and handbook
 - Continue implementing contract to expand alternative fuel capability at over 90 sites
 - Continue to work with GSA on pilot for Federal Fleet Management System to be deployed VA wide
 - Work with GSA to increase VA’s alternative fuel vehicle fleet

- Sustainable Buildings
 - Continue to perform yearly in-house sustainability survey to identify additional sustainable building candidate sites
 - Register all VA medical facilities for third party green building certifications
 - Based on the results of the annual sustainability survey, prioritize facilities to receive third-party sustainability certification and comply with the Guiding Principles for Federal Leadership in High Performance and Sustainable Buildings
 - Ensure all new construction will receive Leadership in Energy and Environmental Design (LEED) Silver Certification and comply with the Guiding Principles

Chapter 9.3

Real Property Performance Management

Capital Asset Management

VA seeks to maintain the optimal mix of investments needed to achieve VA strategic goals and ensure a high level of performance for our assets, while minimizing risk and maximizing the cost-effectiveness.

Table 9-7: VA Strategic Goals

Goal 1:	Improve the quality and accessibility of health care, benefits, and memorial services while optimizing value.
Goal 2:	Increase Veteran client satisfaction with health, education, training, counseling, financial, and burial benefits and services.
Goal 3:	Raise readiness to provide services and protect people and assets continuously and in time of crisis.
Goal 4:	Improve internal customer satisfaction with management systems and support services to achieve mission performance and make VA an employer of choice by investing in human capital.

To this end, VA has developed a number of sound capital asset management strategies, including taking a comprehensive lifecycle approach, and monitoring performance at each stage through the Capital Asset Management System (CAMS) and other tools.

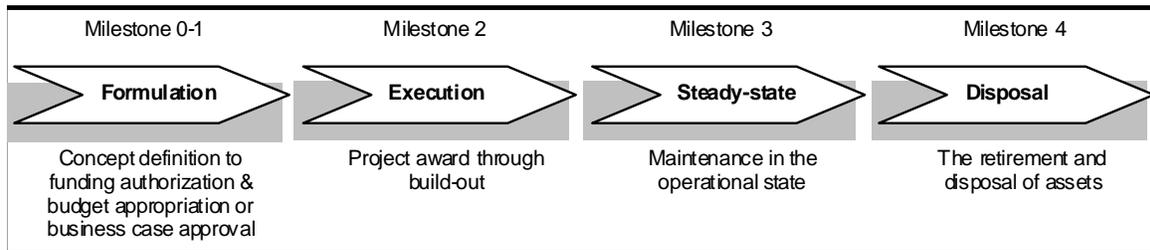

By following this approach and utilizing tools such as a sound capital investment process (including alternatives analysis, strategic linkage, and life cycle costing), enhanced-use leasing, and VA's Capital Asset Management System - Business Intelligence Tool (CAMS-BI) (including performance measurement), VA is able to improve coordination and management of capital assets and provide a single consolidated view of all capital investments in the VA portfolio. These tools and initiatives assist VA in maximizing the value of its portfolio, providing balance and ensuring investments meet VA's mission and strategic goals.

Comprehensive Lifecycle Approach

VA strives to maximize the functional and financial value of capital assets by tracking and monitoring capital performance on a regular basis through the life cycle of an asset. Investment protocols and standards have been developed to provide guidelines for each major phase/milestone in the life cycle of a capital asset (see the figure below).

VA monitors capital asset performance at each stage in the life cycle. While the life cycle appears linear, the various stages are tightly linked. Monitoring of asset performance in steady-state drives disposal decisions and also provides input into the formulation phase to help direct areas of greatest need for capital investments. The result is a cyclical and iterative process for comprehensive life cycle management of our assets.

Figure 9-4: Capital Asset Life Cycle

Formulation Stage

The formulation phase involves defining a specific concept or need and obtaining funding, through appropriated or non-appropriated sources, to obtain a needed capital asset. The formulation of VA's capital investment priorities are strategically linked to the Department's mission through the Strategic Capital Investment Planning (SCIP) process, described in more detail in Chapter 8.

The SCIP process uses the results of monitoring the performance of our assets as a key input. Where assets are not performing as effectively as possible, due to poor condition, location, functional layout, or lack of space available for service delivery, gaps are defined. These gaps form the baseline for SCIP and drive where investments should be targeted for capital improvements. As investments are defined, prioritized, and selected via the SCIP process, their impact on the portfolio is monitored. Selected projects then move to the next life cycle phase, Execution.

Execution Stage

The execution phase focuses on the expenditure of the appropriations obtained in the previous phase and on the actual award of a contract through the build-

out or completion of the asset. Once a project is authorized and funded by Congress it enters the execution stage of its life cycle. Here the emphasis is on measuring planned and actual schedules (design and construction awards, and activation dates) and costs at each phase of the project's completion.

The monitoring of execution phase also provides input to other phases of the life cycle. Projects in execution provide projected impacts to the portfolio in terms of available space, condition improvements, or potential disposal candidates if the project is replacing existing assets. This allows the cyclical and iterative approach to asset management to continue.

Steady State Stage

Once a project becomes fully functional or operational, the steady state life-cycle stage is entered. During steady state, VA performs a combination of regular maintenance and upkeep on its assets and infrastructure through its recurring maintenance funds and non-recurring maintenance (NRM), which involves the purchase and/or improvements of buildings, land, and other structures (including equipment). Recurring maintenance does not alter, modify, or make improvements to existing infrastructure; these funds only keep assets performing in their current operating state. Non-recurring maintenance projects result in a change in space function and/or a renovation of existing infrastructure.

VA's corporate portfolio metrics are generally focused on the steady-state phase of capital asset life-cycle where constant monitoring is required. The CAMS-BI tool plays a large role in monitoring the metrics, providing reporting and analytic capabilities. Analysis of the performance of the assets in the portfolio is used for various internal and external reporting requirements, as well as providing detailed information to assist in decision making. Asset performance in steady state plays a key role in helping define areas that are underperforming and either need additional capital investments or may be candidates for disposal.

Disposal Stage

The final stage of an asset's life cycle is disposal, which involves the proper and orderly retirement or liquidation of an asset. The VA has a number of methods for disposing of assets, including enhanced-use leasing, out-leasing, sharing, sale or transfer. If none of these options prove viable, VA will make the property available for reuse by other federal agencies. If no other agency is interested, VA may utilize deconstruction, mothballing and demolition.

The capability for initiating, justifying, and monitoring proposals for divestment of assets is implemented through CAMS-BI. VA's disposal policy also provides guidance for navigating the complex processes of federal real property disposal. These steps include screening for homeless use, environmental and historical

status evaluations, as well as various notifications to GSA and Congressional committees. Achieving significant reduction in underutilized and vacant space is a Departmental priority and can be achieved with disposal authority.

Capital Asset Management System (CAMS)

The CAMS tool consists of multiple parts, focusing on various stages of the asset management life cycle. The CAMS Portfolio Management tool focuses on managing the investments, both actual and potential, and evaluating their impact on the overall portfolio. The CAMS Portfolio Management tool allows for web-based input of concept papers and business case applications in support of the SCIP process. The data is organized, analyzed, and presented to track and monitor VA's assets against performance goals within and across asset types and administrations. Formulation and execution are the focus of the Portfolio Management tool.

The CAMS initiative supports the Presidential Memo on Real Property, as well as the Strategic Capital Investment Planning (SCIP) process. CAMS-BI has positioned VA to fully contribute to and comply with associated guidance. CAMS allows for web-based input of business case applications used in the SCIP scoring and prioritization processes, as well as other funding applications for leases, agreements, and major medical equipment. In 2008, CAMS implemented enhanced reporting and analysis in the form of a Business Intelligence (BI) and data warehousing system (CAMS-BI). As reporting became more complex and more data was available for trending and performance management, the BI enhancement became necessary to meet the increased demand. The data is organized, analyzed, and presented to track and monitor VA's assets progress against performance goals within and across asset types and administrations. Reports can be used for multiple purposes, such as review and presentations.

CAMS-BI is another part of the overall CAMS and focuses on steady state and disposal phases of the life cycle. CAMS-BI provides detailed analytical, evaluation, and reporting capabilities that allow the VA to monitor its vast portfolio of capital assets with great effectiveness. Steady state performance metrics are a key component of CAMS-BI, allowing tracking of financial, space utilization, energy usage, and condition of our capital assets to ensure continuously improving performance.

By using CAMS, VA monitors its entire capital asset portfolio, examining all significant assets at every life cycle stage, in concert with VA portfolio goals and strategic goals. All capital assets are monitored and evaluated against a set of performance measures (including those that are underutilized and/or vacant) and capital goals to maximize highest return on the dollar to the taxpayer.

CAMS provide several outcomes that result in improved service delivery to Veterans and increased financial accountability to the general public. The impact of this innovative technology is that CAMS:

- Integrates asset management and governance at multiple levels
- Improves financial and analytical capability
- Improves performance management
- Provides for better-informed decisions
- Improves service delivery
- Allows disparate data from across the enterprise to be analyzed together

System updates have been made in CAMS to support a number of changing reporting requirements. In 2007, FRPC reporting was updated to include disposition data, including net proceeds, disposal recipient, and modality of disposal. In 2009, FRPC reporting was updated to include sustainability data for each building asset. VA updated its financial system to reflect specific energy costs, not just traditional energy, to better support internal performance management and Department of Energy (DOE) reporting.

Electronic reporting has been demonstrated by CAMS, improving reporting efficiency and accuracy. VA submitted electronic files to the General Services Administration (GSA) beginning in 2005, and has successfully submitted again in 2006, 2007, 2008, 2009, and 2010 for FRPC reporting. VA has also submitted electronic files for Energy Star ratings to Department of Energy (DoE) on a quarterly basis. DoE benchmarks similar facilities in Energy Star to one another and returns the ratings to VA. Annual Energy Performance Reports have now been created in CAMS-BI to incorporate these ratings and make them available for historical analysis.

In 2010, OAEM and the Office of Information and Technology completed a redesign of the formulation process to align with the new Strategic Capital Investment Planning process (SCIP). The SCIP process consolidated all capital programs, major construction, minor construction, non-recurring maintenance, and leases, into a single submission process. These types of projects had previously been submitted in various fashions into multiple different systems. A new business case form was designed and developed in CAMS to allow for all capital programs projects to be submitted into a single entry point and capture data that would allow improved validation and prioritization of projects across capital programs.

OAEM developed its first full space analysis model in support of the SCIP process in 2010. The analysis consisted of evaluation of current portfolio, determining what is not likely to be usable in 10 years, and adding in new space

slated to become available with currently funded projects to come to an available space inventory. The available space was then compared to the projected space need to determine where gaps existed. The output of the space analysis is a key component of the SCIP gap analysis process and will continue to be refined to include feedback from the initial analysis cycle.

In 2010, OAEM worked to integrate the Post Transaction Oversight Tool (PTOT) with CAMS-BI. The PTOT system is used to manage the Enhanced Use Leases (EULs) portfolio to ensure compliance with all contractual terms for executed leases. CAMS-BI was successfully updated to incorporate the PTOT data and provide enhanced reporting and reminders for items past due, coming due, and status of contractual requirements.

CAMS is the main factor that allows VA to comply with the many complex requirements and detailed level of asset performance measurement required to effectively manage a large real property inventory such as VA's. CAMS also continues to provide necessary information, to the right parties, to make prudent and informed investment decisions related to real property. Within VA, CAMS has already had an impact on capital asset data management. Inventories have been improved, related costs are more accurately tracked and numerous pre-existing asset-related databases have been linked and coordinated. The CAMS process has generated a renewed focus on capital asset matters at all levels of the Department.

VA's portfolio consists of four individual asset categories. VA views these assets as a single comprehensive portfolio. At each stage of the project's life cycle, VA's corporate portfolio goals help identify deficiencies requiring analysis and attention. VA's asset categories are described in the table below.

Table 9-8: Capital Asset Categories

Asset Category	Details
Buildings and Land	<ul style="list-style-type: none"> • Building systems, additions, new construction, renovation, parking garages, and acquisitions and disposal of properties. This also includes site acquisitions.
Equipment	<ul style="list-style-type: none"> • Medical Equipment: Any diagnostic or treatment modality used in the delivery of health care. This includes items such as cardiac-catheterization laboratory equipment, magnetic resonance imaging, or linear accelerators. • Non-Medical Equipment: Non-recurring equipment items that are used by non-medical administrations or offices.
Leases/General Services Administration (GSA) Space	<ul style="list-style-type: none"> • Direct Lease: A contract vehicle that enables VA to become a tenant and rent space and accompanying building services for a specified period at a negotiated rate. • GSA Lease: Unlike the GSA assigned space, GSA Lease Space is space

Asset Category	Details
Assignments	leased by GSA from the private sector. <ul style="list-style-type: none"> • GSA Space Assignment: Leased space acquired from GSA.
Agreements	<ul style="list-style-type: none"> • Energy Savings Performance Contracts (ESPC): A program developed by the Department of Energy designed to reduce energy consumption and costs in federally owned and operated facilities. VA's energy conservation program features ESPC as one among a set of prioritized energy investment funding and procurement vehicles. • Enhanced-Use Leasing: Leasing underutilized VA property on a long-term basis to non-VA users for uses compatible with VA's mission. The Department is able to obtain facilities, services, money, or other in-kind consideration for VA requirements that might otherwise be unavailable or unaffordable. • Enhanced Sharing Agreement: Allows individual medical facilities to contract for services with any health-care provider, or other entity or individual. These contracts can include a wide array of health care resources. There are no maximum dollar limitations for the investments.

The development and deployment of CAMS-BI assisted VA in achieving a major milestone in transitioning from the traditional single asset management style to corporately managing our vast portfolio of holdings. This corporate portfolio perspective enables VA to achieve its overall capital asset business strategy of value management.

Data Sources for CAMS: The two primary sources of data for VA steady-state capital assets are the Capital Asset Inventory (CAI) database (for inventory information) and VA's Financial Management System (FMS) (for financial data). CAI is operated by the Office of Construction and Facilities Management (CFM), with data input and maintenance accomplished locally by each administration using desktop web access. The database contains essential inventory information on all VA administrations including buildings, land, leases, agreements, disposals, and facility condition assessment data.

The other key source system for CAMS-BI is FMS. Financial data, such as revenue, obligations and expenditures, are pulled from the FMS database. In CAMS-BI, the financial data is aggregated by cost types (e.g., operating and maintenance, leasing, energy) for specific assets. The data can also be rolled up for more general views at the local facility, region, and administration levels.

Data from CAI and FMS can be viewed in CAMS-BI separately or in combination to track the health of steady state assets. For example, CAMS-BI reports space utilization using CAI data. CAMS-BI also calculates cost per gross square foot

using FMS and CAI data. CAI and FMS played a critical role in meeting Federal Real Property Council inventory reporting requirements.

Asset Performance Management

Monitoring asset performance begins in the formulation stage of project development as VA staff identifies performance gaps and how investment in capital assets contributes to filling those gaps. Each capital asset proposal submitted through the SCIP process is required to identify, in the business case application, which service gap area(s) the project will contribute and which of the Major or Supporting Initiatives the project aligns (Strategic Alignment). Quarterly reporting is conducted for assets in the steady state stage of the life cycle. Continuous analysis and evaluation of the performance of assets compared to goals and targets is accomplished using CAMS-BI and other tools. Detailed descriptions of the VA capital portfolio goals and the FRPC goals are provided below. VA also uses benchmarking to compare the performance of assets against private sector standards and internal benchmarks, and conducts monthly performance reviews to keep management updated on the status of VA capital assets.

VA Capital Portfolio Goals

VA’s capital portfolio goals are closely aligned with the asset management core objective to provide a safe and appropriate environment for the delivery of benefits to Veterans in a cost-efficient manner. The VA capital portfolio goals are based on the Department’s main objective of managing assets to ensure resources are maximized, assets (including VA staff and Veterans) are safeguarded, and all opportunities (public, private, or a combination thereof) are fully explored. The goals also allow VA senior management to monitor the overall health of the Department’s capital asset portfolio and provide for informed corporate decision-making. VA capital portfolio goals include:

Table 9-9: VA Capital Portfolio Goals

Goal	Description
<p>Decrease Operational Costs</p>	<p>VA seeks to minimize maintenance and operation costs through increasing the efficient use of space, decreasing the number of assets that have exceeded their useful life, and by lowering costs to commercial benchmarks for operating and maintenance. By decreasing operational costs, VA will be able to reinvest much needed funds in improving services to our Nation’s Veterans.</p> <p>VA’s CAMS-BI tracks operating costs using many of the same cost elements the FRPC requires. These include utilities, recurring maintenance and repairs, cleaning/janitorial, and roads/grounds expenditures required to operate a facility.</p>

Goal	Description
Decrease Underutilized Capacity	Decreasing unused and underutilized space is one key factor as is the FRPC facility utilization index: Percent of Space Utilization as Compared to Overall Space (owned and direct-leased). Managing the efficient use of VA's large space portfolio is essential to maintaining a well performing portfolio of assets.
Decrease Energy Utilization	Decreasing the intensity of energy consumption in VA facilities has a direct impact on minimizing the overall operational costs of those facilities. To achieve this, VA is committed to leading the way in effective and efficient building operations and management. VA is achieving this goal by placing energy management expertise at the facility level, proactively upgrading systems that do not meet current standards, more accurately measuring and analyzing energy consumption and costs, and conducting facility energy assessments to identify energy efficiency improvement opportunities.
Increase Intra/Inter-agency and Community-Based Sharing	Combining and sharing assets with other federal, state, and local organizations, departments, and agencies that embrace the mission, goals, and objectives of VA is a cost effective and viable approach to servicing our Veteran's needs.
Increase Revenue Opportunities	Enhanced-use leasing authority provides VA with increased revenues that can then be reinvested to meet other VA service delivery needs. Other revenue generated, including asset sales, can also impact the overall health of the portfolio.
Safeguard Assets	Safeguarding assets (including patient and employee safety) is a top priority of the Department. Decreasing the number of high-risk assets in VA's portfolio can reduce the cost of making these facilities compliant with government standards and practices and ensure the desired safety and security of our employees and Veterans.
Maximize Highest and Best Use	Maximizing the highest and most efficient use of VA assets is a combined effort of all VA organizations. VA strives to increase the number of agreements for service/asset exchanges (including in-kind consideration) that provide benefit to the Veteran and also remove unneeded assets from the portfolio. VA is also working to increase the total number of agreements to ensure full utilization and optimum performance of all VA assets. These agreements and programs – such as enhanced-use leasing – also contribute to increased savings and cost avoidance.

Federal Real Property Council

The Government Accountability Office (GAO) has considered federal real property to be a high risk area for several years. In February 2004, Executive Order 13327 established the Federal Real Property Council (FRPC) to develop guidance and establish asset management principles, collect specified inventory data elements, and performance measures for all federal agencies. The FRPC is composed of Senior Real Property Officers representing federal agencies and cabinet level departments and is chaired by the Office of Management and

Budget (OMB). The Assistant Secretary for Management serves as VA's Senior Real Property Officer.

The FRPC is responsible for providing guidance and facilitating the implementation of agency asset management plans. These tasks are accomplished through a myriad of committees and workgroups both external and internal to the Department. Membership includes federal agencies and the Office of Management and Budget.

As a result of the Presidential Memo on Real Property, issued June 2010, there is now an increased emphasis on agencies achieving cost savings by reducing annual operating costs, reducing square footage, expanding telework, eliminating costly leases, and undertaking other space realignment efforts, such as consolidating existing space. VA is moving aggressively to improve their performance in these areas, and continues to measure where it has been most effective.

In July 2009, GAO provided "An Update on High Risk Issues" for Federal Real Property. They reported progress had been made to address long-standing problems with real property, but cautioned that deep rooted obstacles needed further reform by the new administration and Congress to sustain reform momentum. GAO specifically cited VA for their progress in reducing underutilized space, in part because VA has completed milestones that were planned in response to specific GAO recommendations, including the implementation of Capital Asset Management System-Business Intelligence (CAMS-BI) for improved information and reporting functionality.

Internal workgroups include the VHA Portfolio Workgroup, which includes field Capital Asset Managers, who work with the Office of Asset Enterprise Management to meet federal and agency performance and reporting requirements. Overall, VA portfolio performance is monitored by the VA Monthly Performance Review Board, chaired by the Deputy Secretary, where results are presented on a monthly and/or quarterly basis.

Monthly Performance Reviews

The Deputy Secretary of VA convenes a monthly meeting with senior level executives from the administrations and staff offices called the Monthly Performance Review (MPR). The MPR provides these senior level executives information on the status of VA's financial management and programs. The MPR is a means to create dialogue to improve services to Veterans by highlighting successes and problem areas through performance metrics, including the goals and targets explained above. For capital asset programs, information is provided to the MPR on Major Construction, Minor Construction, Non-Recurring

Maintenance, Facility Condition Assessments, Grants for Veterans Cemeteries, Grants for State Extended Care Facilities, Energy Consumption and Cost, and Disposals. In addition, information is provided on capital assets that are operational.

Benchmarking

A key measure of VA's success is to compare asset performance to that of the private sector via benchmark analysis. CAMS provides VA the means and data to compare certain asset expenses to industry or commercial benchmarks for its leasing and energy programs. Benchmarking is also done within VA and encompasses comparisons across fiscal years and comparisons between similar VA facilities. CAMS currently holds performance data back to FY 2004. VA can analyze and report increases or decreases in costs, utilization, and other goal performance from year to year and across individual stations, networks, and at administration levels.

Real Property Asset Metrics and Results

Federal Real Property Council Performance Metrics

In 2005, VA implemented the Federal Real Property Council (FRPC) Tier 1 performance metrics and aligned them with VA corporate goals. Because much of the data needed to support the FRPC Tier 1 metrics were already embedded in the Department's predefined corporate portfolio goals, the transition from VA's corporate goals to the FRPC metrics was possible. Tier 1 metrics vary only in their broad approach to federal real property. In order to meet federal requirements and to provide VA-focused measures, the Department currently measures and maintains VA's capital portfolio goals and the FRPC Tier 1 metrics. Where there was overlap, VA goals were modified accordingly. VA has four real property goals/metrics and they are discussed below.

Table 9-10: Federal Real Property Goals/FRPC Tier 1 Metrics

VA Goal/FRPC Metric	Description
Percent of Space Utilization as compared to overall space (owned and direct-leased)	Percent of Space Utilization as Compared to Overall Space (owned and direct-leased). This is also one of the VA Capital Portfolio Goals, table 1-3. The intent of this metric is the gauge how effectively the space for that asset is being utilized. FRPC defines specific ranges of utilization based on building usage codes.
Ratio of Operating Costs per Gross Square Foot	This metric measures the Ratio of Operating Costs per Gross Square Foot (GSF). Reference Table 1-3, VA Capital Portfolio Goals for similar metrics related to decreasing operational costs. The metric is intended to measure how effective the operations of a building are compared to its size.

VA Goal/FRPC Metric	Description
Percent Condition Index (owned buildings)	VA performs condition assessments of all its medical facilities. These assessments include estimates of repair needs for each building. VA calculates condition index annually as the ratio of repair needs to replacement value. The higher the Condition Index the better the condition of the constructed asset. Condition Index helps identify assets most in need of repair and plan for upgrades or disposition. The Department currently conducts assessment updates on a three-year cycle for all buildings.
Ratio of Non-Mission Dependent Assets to Total Assets	Using the OMB approved methodology, VA determines whether each asset (owned and direct leased buildings, structures, and land parcel) is mission critical; mission dependent/not critical; or not mission dependent. Mission Dependency is determined by the FRPC Utilization Index for buildings. All VA assets that are 70-100 percent utilized are designated as mission critical. Assets that are 50-70 percent utilized are designated as mission dependent/not critical. Assets that fall below 50 percent utilized are designated as not mission dependent. Land and Structure mission dependency is entered into the CAI database.

Real Property Performance Results

VA regularly monitors real property performance and reports to the Office of Management and Budget on Federal Real Property Council Tier 1 Measures. VA also reports energy consumption to the Department of Energy and disposal plans for the annual budget process. The table below reflects the level of change in each performance area from the baseline years.

Table 9-11: Real Property Performance Results

Measure	Results				Targets		Strategic Target
	2006	2007	2008	2009	2010 (Initial)	2011 (Initial)	
Utilization: Percent of space utilization as compared to overall space (owned and direct-leased)	104%	112%	113%	113%	121%	108%	100%
Condition: Percent Condition Index (owned buildings)	79%	74%	66%	74%	71%	76%	87%
Mission Dependency: Ratio of non-mission dependent assets to total assets	15%	12%	12%	12%	9%	11%	10%
Operating Costs: Ratio of operating costs per gross square foot (GSF) (Targets conform with FRPC Tier 1 definitions)	\$5.59	\$5.80	\$6.47	\$6.95	\$7.64	\$7.38	\$6.41

Utilization: VA's baseline performance was established in 2004 at 80 percent. In 2010, utilization performance was 121 percent, exceeding the target of 100 percent. VA improved its utilization of space through disposals, functional consolidations, and improved planning. Over the period 2003 - 2010:

- VA reduced its inventory by 555 assets (7.3 million GSF) and 730 acres
- VA's total GSF (owned and leased) increased over the same period, increasing from 156,380,261 GSF in 2004 to 160,648,159 GSF in 2010 for a net gain.

Disposals and other Dispensations: Summary data on actual disposals and enhanced-use leases for 2010, and planned disposals and enhanced-use leases for 2011 through 2015 can be found in appendix C. In 2010, VA disposed of 111 assets, for approximately 1.0 million GSF and 111 acres of land through reuse, demolition and enhanced use lease for an estimated cost savings of \$7.6 million.

Table 9-12: Actual Disposals and Other Dispensations by Modality 2003 -2010

Disposal Modality	2003-2008			2009			2010			Grand Total		
	# Total Assets	Total GSF	Total Acres	# Total Assets	Total GSF	Total Acres	# Total Assets	Total GSF	Total Acres	# Total Assets	Total GSF	Total Acres
Deconstruction	8	12,840	0	4	169,004	0	10	24,098	0	22	205,942	0

Total	626	8,035,121	427.4

Condition: VA's 2005 baseline performance is 81 percent; 2010 performance was 71 percent, with a target of 76 percent by 2011. The process of how VA determines its facilities' condition and overall repair and maintenance needs, including the current status of how the Department is addressing this need, is explained below:

Upgrading VA Facilities Condition

VA thoroughly monitors the condition of its facilities. The condition of its buildings is documented in the VA's Facility Condition Assessment report. Each medical center is surveyed by a professional team of engineers and cost estimators at least once every three years. These surveys include an assessment of its building systems (e.g., electrical, mechanical, plumbing, elevators, structural and architectural, safety, etc.) and site conditions (e.g., roads, parking, walks, water mains, sanitary and storm water protection, etc.) The facility is objectively evaluated by the professional FCA review team (contractor and/or VA personnel from headquarters) and given ratings of A (new or like new condition), B (above average condition), C (average condition), D (poor condition) and F (critical condition requiring immediate attention). Building and site conditions given a rating of a D or F by the reviewers are also given an estimated cost of corrections. Once the assessment is completed the station correction costs are totaled and a percentage is computed comparing the total estimated correction costs to the total estimated replacement cost of the facility. This is referred to as the condition index. Here the higher the percentage the better the condition of the facility. At other times a simple ratio is provided of these two factors with a lower ratio

indicating better overall facility condition. VA surveys and documents the condition of all its owned buildings.

The FCA report is actively used by VA to improve the condition of its facilities. The VA Non-recurring Maintenance (NRM) programs are the infrastructure repair program. They are the most active in funding VA's FCA documented severe deficiencies (D's or F's). VA estimates the cost to repair all currently-identified FCA deficiencies to be approximately \$9.8 billion. This total precludes planned capital improvements supported by the 2011 appropriation and the 2012 request. All VA infrastructure or construction project requests now include FCA related corrections. VA is making a concerted effort to reduce its backlog of critical FCA deficiencies. About 50 percent of all Minor Construction dollars obligated annually correct important documented FCA deficiencies. VA's Major Construction program also corrects a significant amount of FCA-documented critical needs annually.

VA will continue to use capital resources, where appropriate, to address the most critical deficiencies. Facility condition is a key gap area in the Strategic Capital Investment Planning (SCIP) process. The backlog of correction costs are presented as gap for facilities to develop plans again, identifying the necessary resources to close the gap of facility condition deficiencies.

Table 9-14: Facility Condition Assessment Status Report (as of 12/16/2010)

Admin.	Baseline	New Deficiencies	FCA Projects Completed	FCA Projects Obligated - Not Yet Completed	\$ Remaining
VHA	\$10,036,407,219	\$1,798,105,316	\$600,876,638	\$1,506,307,045	\$9,727,328,852
All Other	\$81,719,605	\$13,412,533	\$280,600	\$8,729,885	\$86,121,653
Total	\$10,118,126,824	\$1,811,517,849	\$601,157,238	\$1,515,036,930	\$9,813,450,505

Mission Dependency: In 2005, 22 percent of VA building assets were classified as non-mission dependent. In the last four years, substantial progress has been made. In 2010, VA reduced the percentage of non-mission dependent assets in its portfolio to 9 percent. This performance has exceeded VA's target that 10 percent or less of its portfolio be classified as non-mission dependent by 2010.

Operating Costs: VA's 2004 baseline performance is \$4.52 per GSF. For 2010, VA's operating cost per GSF was \$7.64. The 2011 target is \$7.38.

This year, VA is participating in a government-wide Presidential initiative to reduce real property-related operating costs required to maintaining non mission dependent physical assets. In 2011, the disposal of surplus assets scheduled to exit VA's inventory will reduce these costs by an estimated \$11.9 million.

Future Plans

In 2011, VA plans to:

- Integrate the Electronic Contract Management System (ECMS) with the CAMS-BI tool.
- Replace current Crystal Reports tool with BI Reporting tool for tighter integration with CAMS-BI.
- Integrate the Energy Bill Audit database with the CAMS-BI as a potential replacement for manual entry energy consumption data.
- Integrate the Energy Metering database with CAMS-BI for summary level analysis.
- Complete software upgrades to both CAMS components, BI and Portfolio Management.
- Track maintenance costs for maintaining underutilized and vacant properties.
- Evaluate leased properties to ensure they are accurately accounted for in the inventory and can be analyzed for cost effectiveness.
- Track, monitor, maintain and evaluate square foot (sq ft) reductions, financial and non financial benefits from agreements.
- Evaluate leased properties to ensure they are accurately accounted for in the inventory and can be analyzed for cost effectiveness.
- Update VHA space analysis process to ensure space is accurately projected.
- Incorporate updated VHA workload information or similar projection model data.
- Expand space analysis to other administrations and staff offices based on their forecast of workload demands.
- Evaluate space projection methods and tools to determine if consolidation is an option to improve efficiency. Evaluate options for better integrating the SCIP action plan and gap analysis processes with the business case submission process currently in CAMS.
- Redesign and revamp the CAMS-BI data and reporting layouts to better reflect the new performance areas critical to real property management.

In 2012, VA plans to:

- Begin integration with new SAM tool, allowing for more detailed analysis on resources required to support and maintain our facilities.
- Potentially replace business case portion of CAMS with new, better integrated solution with SCIP.

- Expand Business Intelligence (BI) reporting capabilities below the building level detail, including departmental breakdown.
- Work with field elements to ensure data accuracy is maintained and provide CAMS analysis to assist in identifying areas requiring action.
- Enhance FAS quarterly reporting.

Page Intentionally Left Blank.

Chapter 9.4

Collaboration with the Department of Defense

Introduction

There have been many efforts by Congress and the Executive Branch to improve collaboration and health resource sharing between VA and the Department of Defense (DoD). These initiatives have been made in order to improve the efficiency, accessibility, and cost-effectiveness of health care delivery for beneficiaries.

President Obama has expressed strong support for improving collaboration and seamless transition between VA and DoD. The Administration's ongoing efforts will achieve significant benefits and savings by forming a more consistent, flexible and meaningful partnership between the two Departments that will better provide for the men and women who serve and have served our country.

In May 2003, the President's Task Force to Improve Health Care for Our Nation's Veterans (Task Force) submitted a final report identifying opportunities to improve benefits and services for beneficiaries; reviewing barriers and challenges that impede coordination; and identifying opportunities for improved resource and infrastructure utilization through partnership between the Departments. In pursuit of the stated goal and in concert with the Task Force's organizing principles, the VA/DoD Construction Planning Committee (CPC) was created under the VA/DoD Joint Executive Council (JEC). The JEC was established by section 583 of Public Law 108-136. The JEC recommends to the Secretaries of the Departments a strategic direction for joint coordination and sharing of resources. It reports annually on progress made in implementing increased coordination. The CPC was established to provide a formalized structure to facilitate cooperation and collaboration in achieving an integrated approach to construction planning initiatives that are mutually beneficial to both Departments. The primary focus of this group is to ensure collaborative opportunities for joint capital asset planning are explored, evaluated, and maximized to enhance service delivery. The CPC serves as the clearinghouse for the final review of all joint capital asset initiatives submitted by any element of the JEC. Types of capital initiatives include construction (major and minor), leasing, and other real property related activities. The CPC is comprised of individuals with the expertise and comprehensive knowledge of capital asset

planning, investment, and management policies and strategies of their respective Departments.

The CPC will continue to assist in identifying opportunities and coordinating the needs and requirements of both Departments in order to increase collaborative capital initiatives.

VA/DoD Joint Executive Council Strategic Plan

The VA/DoD JEC Strategic Plan targets the improvement of operational efficiency through Performance Goal 5, which relates to the management of capital assets, procurement, logistics, financial transactions, and human resources. This performance goal has Objective 5.1 tasking the CPC's to evaluate joint collaborative capital asset planning opportunities based upon the capital requirements identified by both Departments.

VA/DoD Collaborative Projects

VA/DoD collaboration is an element of each capital project: Major Construction, Minor Construction, and Lease. Each project is required to provide an assessment of potential DoD collaborative opportunities. DoD collaboration is one of the national criteria elements used to evaluate, score, and rank capital projects. An example of a prominent, successful joint venture is currently found in North Chicago, where VA and DoD have staged an organizationally integrated facility (the project status is now physically complete). VA and DoD hope to build on these successes for future projects.

In 2010 the Construction Planning Committee (CPC) conferred on both VA's and DoD's capital asset planning and priority processes to better identify those projects that would have the highest possibility of joint departmental collaboration. This coordination, coupled with criteria to evaluate and provide greater priority to those projects that have elements of VA/DoD collaboration, has resulted in a larger window of opportunity for collaboration efforts across the departments.

VA's Strategic Capital Investment Planning (SCIP) process was initiated in 2010 for the 2012 budget cycle. Implementation of SCIP will significantly reduce existing and projected gaps in safety, access, space, condition, utilization, security and other identified performance areas. DoD CPC members participated actively in VA's SCIP evaluation process and assisted in identifying possible construction locations that would support increased collaboration. Also in 2010, the DoD's Capital Investment Decision Making (CIDM) process included key evaluation criteria rankings that denoted those projects that entail VA/DoD collaboration efforts. The outcome of adding greater insight to each department's capital asset

planning has resulted in each department sharing capital construction priorities with the expressed goal of fostering a more effective use of federal funds.

The Major Construction project below involves major collaborative efforts with the Department of Defense.

- Biloxi, MS – With a total estimated cost of \$310,000,000 this project will be comprised of the following elements:
 - New mental health clinical addition
 - New blind rehabilitation center
 - Enhanced-use lease of 90 acres at the Gulfport Division
 - Comprehensive inpatient mental health services to DoD facilities on the Gulf Coast including Keesler Air Force Base (AFB).

In addition, VA and DoD are continuing to work on a previously funded major construction projects at Denver, CO; as well as several minor construction projects to establish community based outpatient clinics (CBOC), such as the CBOC built by the Alaska VA Healthcare System located outside the perimeter of Elmendorf Air Force Base. That clinic opened in 2010 and is connected by an enclosed walkway to the AF Hospital to facilitate ease of access to VA patients being referred for care at the AF facility.

The 2010 Budget Submission included a 115,000 net usable square foot leased Health Care Center in Monterey, CA. Subject to DoD approval, this HCC presents an opportunity for a partnership with DoD through collocation of its own outpatient services of approximately 16,000 square feet.

The 2011 Budget Submission included a major project prospectus for a VHA Outpatient Clinic (OPC) to be constructed on a BRAC property at Alameda Point in Northern Alameda County. This project would also support an existing VA/DoD Joint Venture that will create space for a US Air Force satellite primary care clinic and a jointly staffed VA/DoD Joint Ambulatory Surgical Center.

Community Based Outpatient Clinics

Each business plan submitted for consideration to establish a new CBOC includes an assessment of DoD collaborative opportunities. DoD collaboration is one of VA's national criteria elements used to evaluate and score CBOCs. In recent years, VA identified the following CBOC collaborative opportunities:

- Charleston Naval Hospital, SC (Goose Creek)
- Fort Meade, MD
- Fort Belvoir, VA

The Goose Creek CBOC was completed in November 2010. The Fort Meade CBOC construction is expected to be completed in early 2012. The Fort Belvoir CBOC is under construction.

It is envisioned that VA and DoD could develop a common Business Plan template for a Joint Venture CBOC application to serve as a model for larger projects in the minor and major construction programs.

Minor Construction Program

VA/DoD collaboration is one of the national criteria elements used to evaluate, score, and rank Minor Construction projects. Each project application for funding is required to provide an assessment of potential DoD collaborative opportunities.

VA has identified the following Minor Construction project collaborations:

- Martinsburg, WV: Fort Detrick CBOC
- Honolulu, HI: VA/DoD Ambulatory Surgery/Procedure Center
- Honolulu, HI: VA/DoD Endoscopy Center
- Guam Hospital: VA CBOC
- Panama City, FL: VA/DoD Community Based Outpatient Clinic

The Fort Detrick CBOC completion is planned for 2011. The VA/DoD Ambulatory Surgery/Procedure Center project in Honolulu has a projected completion in 2013. The VA/DoD Endoscopy Center in Honolulu was awarded in 2010 with a projected completion in 2013. The Guam CBOC is currently under construction. The Panama City CBOC project is in discussions between VA and DoD.

Other Potential Future VA/DoD Collaborative Projects

There is currently a feasibility study being conducted between the Army and VA in Fort Leavenworth, KS to determine the healthcare needs in that area and determine the need for a joint facility. Likewise, a study is being conducted in Wichita, KS, to evaluate healthcare needs and the possibility for collaboration between the Air Force and VA for a facility in that area.

DoD hired a contractor to conduct a multi-service Market Analysis to determine future healthcare requirements on Oahu, Hawaii. All Federal partners, including Army, Navy, Air Force, and VA are included in the analysis.

At Fort Knox, KY the Army is building a new hospital. VA currently has a CBOC in the existing Army facility, and is exploring options to relocate the CBOC in the new Army facility when it is built.

The Navy is planning to build a new hospital in Beaufort, SC. VA has a CBOC in the current hospital and is exploring options to relocate the CBOC in the new Navy facility when it is built.

VA Puget Sound HCS is exploring the possibility of a CBOC adjacent to the Naval Hospital Bremerton (NHB), Washington. VA currently has a leased CBOC several miles from the NHB.
