**APPENDIX C**  
**HAZARDOUS MATERIALS STORAGE**

## APPENDIX C

### HAZARDOUS MATERIALS STORAGE

**Table C-1.** An inventory of hazardous materials stored in industrial workplaces based on information maintained by the Bioenvironmental Engineering Services office is presented in Table C-1. Specifically, this inventory reflects information tabulated on Air Force Form 2761, Hazardous Materials Data. The quantity and quality of data on the Hazardous Materials Data forms varies considerably over the period of available records. For some workplaces, records were available back to 1972; for others, records were only available since the mid-1980s. The most complete records are available for the last 5 years (i.e., 1987 to 1992). Since 1990, most of the data have been recorded on a computer-generated version of Air Force Form 2761.

The "Quantity Stored" entry is as it was listed on the original forms. If a quantity was not specified on the form, "unknown" has been listed in the Quantity Stored column. It should also be noted that only the amount of product usage per unit time was recorded on the Hazardous Materials Data forms; product storage per unit time was not recorded on the forms. A major assumption made for this appendix is that usage data was the only available data for storage.

The units of measure vary for different classes of products listed on the Hazardous Materials Data forms. The "Quantity Stored" for many products is given in conventional quantitative units of ounces, pounds, tons, pints, quarts, gallons, liters, and grams. Other products, however, are listed in terms of non-quantified units such as cans, boxes, rolls, tubes, kits, packs, drums, and cylinders. For these products, the conversion factors listed below were used.

1 bag	= 25 lb	1 ball	= 1 lb	1 bar	= 1 lb
1 barrel	= 350 lb	1 box	= 100 lb	1 can	= 50 lb
1 canister	= 50 lb	1 caplet	= 1 lb	1 cartridge	= 1 lb
1 case	= 50 lb	1 cycle	= 1 lb	1 cylinder	= 100 lb
1 disk	= 1 lb	1 dozen	= 1 lb	1 drop	= 1 lb
1 drum	= 417 lb	1 each	= 1 lb	1 jar	= 1 lb
1 keg	= 100 lb	1 kit	= 1 lb	1 mon	= 1 lb
1 pack	= 1 lb	1 package	= 1 lb	1 pad	= 1 lb
1 pail	= 50 lb	1 pellet	= 1 lb	1 pillow	= 1 lb
1 roll	= 1 lb	1 spool	= 1 lb	1 stick	= 1 lb
1 tablet	= 1 lb	1 tub	= 1 lb	1 tube	= 1 lb

For products listed using volumetric measures, such as pints, quarts, gallons, and liters, knowledge of the density or specific gravity of each product would be required to calculate the respective total weights of product usage per unit time. Given the fact that such data are not recorded on Hazardous Materials Data forms, the weight of an equivalent volume of water (1 U.S. gallon weighs 8.3453 pounds or 3.7854 kilograms) was used to calculate an approximate total product weight. All weights recorded in the English system of ounces and pounds were converted to their metric equivalent.

Only the actual products used in each workplace are listed in Table C-1. In most cases, the product used (e.g., black spray paint) is a mixture of unique chemical constituents. For example, black spray paint consists of several chemical compounds, such as toluene, acetone, butyl acetate, butyl cellosolve, and isobutane. In addition, black spray paint manufactured by two different companies may contain different percentages of the same compounds (i.e., one may contain 5

percent toluene and the other 19 percent) or an entirely different composition of chemical compounds.

**Table C-2.** The list of products in Table C-1 used in quantities which are subject to reporting requirements specified under 40 CFR Part 373 is provided in Table C-2. Under Section 120(h)(1) of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), whenever any agency, department, or instrumentality of the United States enters into any contract for the sale or other transfer of real property which is owned by the United States, and on which any hazardous substance was stored for 1 year or more, known to have been released, or disposed of, the contract must include notice of the type and quantity of such hazardous substance, and the time at which such storage, release, or disposal took place, to the extent such information is available based on a complete search of agency files. Requirements for such notice are outlined in 40 CFR Part 373.

The notice required by 40 CFR Part 373 for the storage of hazardous substances applies only when hazardous substances have been stored in quantities greater than or equal to 1,000 kilograms (or 2,205 pounds) or the CERCLA-reportable quantity for the substance as listed in 40 CFR Part 302.4, whichever is greater. Hazardous substances that are also listed under 40 CFR 261.30 as acutely hazardous wastes, and that are stored for 1 year or more are subject to the notice requirement when stored in quantities greater than or equal to 1 kilogram (2.205 pounds).

Constituents of products and their percentages are listed in Table C-2 when they were provided on Air Force Form 2761. Synonyms and Chemical Abstracts Services Registry Numbers (CASRN) for these constituents are also provided when listed in the Keller's Chemical Reg-A-Dex Chemical Cross Reference.
