SELECTED BIBLIOGRAPHY OF THE
PHENOXY HERBICIDES

VII. Military Uses

J. D. Diaz-Colon and R. W. Bovey*

Introduction

During the Indochina war, large quantities of defoliants were sprayed in Vietnam. Their main purpose was to defoliate vegetation that the enemy used as cover for troop movements and arsenal caches. Military uses of herbicides in that conflict created a worldwide controversy. As a result, an abundance of literature evolved on the subject. This publication includes a selected number of references pertaining to military uses of defoliants, with particular reference to the phenoxy herbicides.

Previous publications in this series regarding fate, dioxins, toxicology, ecology, microorganisms and analysis were published in 1976, 1977 and 1978.

References are listed in alphabetical order according to senior author's name. For references published in languages other than English, the abbreviated form of the particular language is enclosed in parentheses after the title. A list of the abbreviated and the complete names of languages and a list of the abbreviated and complete names of periodicals, together with their place of origin, are also provided. If English abstracts for the references are available, the abstract sources are included after the listed reference.

*Respectively, agricultural research technician and research agronomist, Federal Research, Science and Education Administration, U.S. Department of Agriculture, and The Texas Agricultural Experiment Station (Department of Range Science).
