Adapta Medical receives FDA market clearance for touchless urinary catheter

Published on October 7, 2016 at 8:49 AM

Adapta Medical, Inc. has received FDA market release for the PerfIC Cath[®] intermittent touchless urinary catheter. The sterile catheter system was designed by J. Glen House, MD, a C7 quadriplegic with limited finger dexterity.

FDA clearance for the PerfIC Cath[®] will result in Adapta expanding the PerfIC Cath[®] product line and launching the new mPower Cath[™] series catheter product line. Both product lines feature hydrophilic and gel lubricants for straight and coude-tipped catheters. The PerfIC Cath[®] catheters have an attached urine collection bag while the mPower Cath[™] products have a urine collection bag that is not attached to the catheter.

"The PerfIC Cath[®] catheter represents a significant advancement in intermittent catheter technology and is extremely easy to use, even with limited dexterity," said House. "It is designed for those with a spinal cord injury, multiple sclerosis, diabetes, stroke, spina bifida or other conditions that require a catheter, but can be used easily by those with normal hand dexterity too. It is created for users by users." With a variety of patents, the catheters are truly unique and offer a new experience for catheter users.
